NEW QUESTION # 86

After saving a new record to the database, the list is not updating.

```
data;
@wire(recordList, {recordId : '$recordId'})
records(result){
    if(result.data){
        this.data = result.data;
    } else if(result.error){

    }
}
}
```

What should the developer change in the code above for this to happen?

- A. Create a new variable to store the result and annotate it with @track.
- B. Create a variable to store the result and call refreshpex().
- C. Add the @track decorator to the data variable.
- D. Call rafrasnApex() ON this.dazta.

Answer: B

Explanation:
In Lightning Web Components (LWC), the data displayed in a component is not automatically refreshed when a new record is saved to the database. To refresh the displayed list of records in a lightning-datatable after a save operation, developers should use the refreshApex() function. This function is imported from the
@salesforce/apex module and is used to refresh the cache and re-execute the Apex wire method to fetch the latest data from the server. The @track decorator is no longer necessary in most cases due to reactive properties being the default behavior in LWC as of Spring '20 release. Also, calling refreshApex() on this.
data directly or creating a new tracked variable will not initiate a refresh of the cached data.
