The Plat-Dev-210 web-based practice exam requires no installation so you can start your preparation instantly right after you purchase. With thousands of satisfied customers around the globe, questions of the Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam dumps are real so you can pass the Salesforce Plat-Dev-210 certification on the very first attempt. Hence, it reduces your chances of failure and you can save money and time as well.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 2	Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

Topic 3	Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.

Salesforce Realistic Sample Plat-Dev-210 Exam - Salesforce Certified Omnistudio Developer Latest Training 100% Pass Quiz

TestKingIT is a very good website to provide a convenient service for the Salesforce certification Plat-Dev-210 exam. TestKingIT's products can help people whose IT knowledge is not comprehensive pass the difficulty Salesforce certification Plat-Dev-210 exam. If you add the Salesforce Certification Plat-Dev-210 Exam product of TestKingIT to your cart, you will save a lot of time and effort. TestKingIT's product is developed by TestKingIT's experts' study of Salesforce certification Plat-Dev-210 exam, and it is a high quality product.

Salesforce Certified Omnistudio Developer Sample Questions (Q94-Q99):

NEW QUESTION # 94

A developer needs to create a list of cases for an account in a single Data table in a FlexCard. Like the one shown below.

How can the developer configure the FlexCard to display the case records in this way?

- A. Enable the record Looping feature on the data table elements
- B. Disable the Repeat Record feature on the FlexCard setup tab
- C. Select the Repeatable Mode property on the data table elements
- D. Enable the Repeat Records feature on the FlexCard Setup tab

Answer: C

Explanation:

The Repeatable Mode property on the data table elements allows the developer to display multiple records in a single data table. The Repeat Records feature on the FlexCard Setup tab is used to display multiple FlexCards for each record in a data source. The Record Looping feature on the data table elements is used to iterate over a list of records and perform actions on each record. The Overwrite Target for all Null input checkbox on the Account id field is used to overwrite the existing value in the target object with null if the input value is null.

NEW QUESTION # 95

Refer to the exhibit below. A developer has configured an integration Procedure element with Additional input.

Alternatively, how could the developer configure SEND/RESPONSE TRANSFORMATION to send exactly the same data?

Assume the developer has un-checked Send Only Additional input.

- A. ☐
- B. ☐
- C. ☐
- D. ☒

Answer: D

Explanation:

The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.

ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom. The Additional input parameter is not needed in this case, as it is already included in the Send JSON Path.

NEW QUESTION # 96

A developer examines data received from an external data source. The data is nested two levels down in the JSON structure. Which OmniStudio tool could the developer use to simplify this data?

- **A. Integration Procedure**
- B. Guided Workflow
- C. HTTP Action Element
- D. Data Mapper Transform

Answer: A

Explanation:

According to Salesforce OmniStudio Integration Procedures documentation, when working with deeply nested JSON, Integration Procedures are ideal. They allow developers to flatten and manipulate JSON data, especially when handling external responses.

* C. Integration Procedure - This is correct. IPs provide Response Transformers, DataRaptor Transforms, and Response Actions to reshape and simplify nested data structures for consumption by front-end components.

Incorrect Options:

* A. DataRaptor Transform is used inside IPs but cannot directly handle external HTTP calls or manage complex orchestration.

* B. HTTP Action Element is used inside an Integration Procedure, but by itself, it does not process or simplify the data.

* D. Guided Workflow is not a recognized OmniStudio component for data transformation.

:

OmniStudio Integration Procedures Guide # Handling Nested JSON

NEW QUESTION # 97

A developer creates a Flexcard that displays a contact's mailing address and passes the contact's postal code to a child FlexCard. When configuration text elements in the child FlexCard, what syntax should a developer use to refer to the contact's postal code?

- **A. {Params.postalcode}**
- B. {Parent.postalcode}
- C. {Postalcode}
- D. {Records.postalcode}

Answer: A

Explanation:

The Params node contains the data that is passed from the parent FlexCard to the child FlexCard. The developer should use {Params.postalcode} to refer to the contact's postal code in the child FlexCard.

NEW QUESTION # 98

A developer is building an OmniScript and needs to retrieve data from Salesforce and from an on-premises billing database.

Which two OmniScript elements could retrieve this data?

Choose 2 answers

- **A. DataRaptor Extract Action**
- B. Navigate Action
- **C. HTTP Action**
- D. Response Action

Answer: A,C

Explanation:

According to the OmniScript Action Elements page, a DataRaptor Extract Action can be used to "get data from one or more Salesforce records" and an HTTP Action can be used to "get, save, or delete data through a web application programming interface (API)".

NEW QUESTION # 99

A wise man can often make the most favorable choice to buy our Plat-Dev-210 study materials, i believe you are one of them. If you are not at ease before buying our Plat-Dev-210 actual exam, we have prepared a free trial for you. Just click on the mouse to have a look, giving you a chance to try on our Plat-Dev-210 learning guide. Perhaps this choice will have some impact on your life. And our Plat-Dev-210 training braindumps are the one which can change your life.
