100% Pass 2026 Microsoft Useful Latest PL-400 Test Preparation

Our company has employed a lot of leading experts in the field to compile the Microsoft Power Platform Developer exam question. Our system of team-based working is designed to bring out the best in our people in whose minds and hands the next generation of the best PL-400 exam torrent will ultimately take shape. Our company has a proven track record in delivering outstanding after sale services and bringing innovation to the guide torrent. The team of the experts in our company has an in-depth understanding of the fundamental elements that combine to produce world class PL-400 Guide Torrent for our customers. This expertise coupled with our comprehensive design criteria and development resources combine to create definitive PL-400 exam torrent.

Microsoft Power Platform Developer Sample Questions (Q333-Q338):

NEW QUESTION # 333

You need to ensure data returned from the Web API corresponds to the correct environment. What should you use?

- A. records in a new configuration table
- B. system settings
- C. environment variables
- D. plug-in secure configurations

Answer: C

Explanation:

Topic 6, City Power & Light

Background

City Power & Light is an energy and utilities company that has offices in Europe. The company subsidizes home improvements for domestic customers, to improve energy efficiency and to meet environmental commitments. The company also distributes and generates electricity for domestic and commercial customers.

The company has 2,000 employees in multiple offices and in work-from-home locations.

City Power & Light uses a team of schedulers, assessors, field engineers, and customer support agents for home improvements in a program named Get Energy Fit.

Current Environment

Get Energy Fit Program

City Power & Light uses the following to manage the Get Energy Fit program:

- * The company uses a Microsoft Excel spreadsheet named Planning Hub on Microsoft SharePoint Online to store information about customer appointments, customer details, and customer eligibility in the program.

- * The company records sensitive customer information that includes the document identification numbers and the customer's financial information.

- * The company uses an assessor to verify customer eligibility in the program and to perform a suitability assessment. The assessor completes the suitability assessment by using a paper and clipboard at the customer property and enters the data to the Planning Hub after the assessment is completed. The assessor also uploads

- * photographs to an on-premises document library. The assessor completes the eligibility assessment by using an application written in React.

- * Schedulers use Microsoft Outlook to schedule engineers and assessors for home improvement appointments.

About 200 appointments are scheduled daily.

- * Employees for the company submit funding claims on behalf of the customer by uploading evidence and compliance checks information to an application named the Claim Submission Portal.

Technical Environment

- * Schedulers use Windows 11 desktop and laptop computers with the latest version of Microsoft Edge.

- * Assessors use iOS and Android tablet devices.

- * The Claim Submission Portal uses REST-based APIs for all operations and a dedicated testing environment.

Authentication to the API is provided by using the following example header key and value pair of Authentication:

2C8D41431415E429C7FC7A74D8315

- * The company uses Microsoft Azure for hosting multiple applications.

Requirements

Overview

City Power & Light plans to implement Microsoft Power Platform to improve the customer experience and increase delivery for the Get Energy Fit program.

Business Requirements

- * Only team leaders and senior managers should have access to read personally identifiable information (PII).

- * All development changes must be tested in a separate environment.

- * The company requires out-of-the-box solutions, when possible.

- * Sensitive credentials, such as user passwords and API secrets, must be stored securely.

- * The Claim Submission Portal must allow citizen developers to create automated solutions.

- * Customer and appointment information must be accessible to all applications.

Planning Hub Application

The company is planning to replace the Planning Hub spreadsheet with a new application. The new application has the following requirements:

- * The application must support a component design that provides rapid changes requested by the schedulers.

- * The data model for the application must capture the following information:

- * The application must support a component design that provides rapid changes requested by the assessors.

- * The data model for the application must capture the following information:
 - o Information about customers such as name, address, and other PII.

- o The data and time for an assessor's or engineer's appointment. Schedulers must be able to view all appointments without filters, o Records the details of the home improvements installed for the customer, o Contains all the information and evidence for submission to the Claim Submission Portal.

- * After an assessor uploads the funding application and all evidence after a home improvement has been complete, the company requires that the status of the application is set to Submit and should run the following:

- o Retrieve the details about the customer and the improvement installed, o Send an approval to a senior manager to review and approve in Microsoft Teams.

- o Upload the information to the API endpoint.

- o If the upload fails to complete, it should retry after a delay of 30 seconds up to three times. If an error occurs after three times, the application should send an email notification to the application support team.

- o Must record the status on the funding application.

Suitability Assessment Tool

The company plans to implement a new application named the Suitability Assessment Tool for the assessors.

The new application has the following requirements:

- * Must integrate with Microsoft Power Platform.

- * Assessors must be able to complete the eligibility assessment by using the Suitability Assessment Tool. The assessors must be able

to upload photographs to the on-premises file share.

* Must be developed by using modular components that can be used by other applications.

* Must be optimized for use on tablet devices.

* All changes to the application must be completed in the Suitability Assessment Tool solution.

Reporting

The company has the following requirements for a reporting solution:

* The data source for the reporting solution must support incremental refreshes.

* The solution must report accurate data if an error occurs.

NEW QUESTION # 334

You create a Power Automate flow that retrieves data from a proprietary database.

You need to ensure that the flow works for other users.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Share the environment by giving permissions to the users.
- **B. Share the custom connector with users.**
- C. Share a view with users.
- **D. Share the flow with users.**

Answer: B,D

Explanation:

Share the flow and the custom connector with users.

Reference:

<https://docs.microsoft.com/en-us/connectors/custom-connectors/share>

NEW QUESTION # 335

You need to improve warehouse counting efficiency.

What should you create?

- **A. a canvas app that scans barcodes to allow a warehouse worker to select inventory counts**
- B. a model-driven app that allows the user to key in inventory counts
- C. a flow that updates the warehouse counts as the worker performs the count
- D. A Power BI dashboard that shows the inventory counting variances

Answer: A

Explanation:

Scenario: Warehouse counting is performed manually by using a counting journal. All warehouse boxes and items are barcoded.

Topic 1, Adventure Works

Background

Current environment

Adventure Works Cycles wants to replace their paper-based bicycle manufacturing business with an efficient paperless solution. The company has one manufacturing plant in Seattle that produces bicycle parts, assembles bicycles, and distributes finished bicycles to the Pacific Northwest.

Adventure Works Cycles has a retail location that performs bicycle repair and warranty repair work. The company has six maintenance vans that repair bicycles at various events and residences.

Adventure Works Cycles recently deployed Dynamics 365 Finance and Dynamics 365 Manufacturing in a Microsoft-hosted environment for financials and manufacturing. The company plans to leverage the Microsoft Power Platform to migrate all of their distribution and retail workloads to Dynamics 365 Unified Operations.

The customer uses Dynamics 365 Sales, Dynamics 365 Customer Service and Dynamics 365 Field Service.

Retail store information

Adventure Works Cycle has one legal entity, four warehouses, and six field service technicians.

Warehouse counting is performed manually by using a counting journal. All warehouse boxes and items are barcoded.

The Adventure Works Cycles retail location performs bicycle inspections and performance tune-ups.

Technicians use paper forms to document the bicycle inspection performed before a tune-up and any additional work performed on the bicycle.

Adventure Works Cycles uses a Power Apps app for local bike fairs to attract new customers.

A canvas app is being developed to capture customer information when customers check in at the retail location. The app has the following features:

Customer selects yes or no if they are on the mailing list.

Customer selects the amount of times they have visited the store.

Customer selects the type of service needed.

The search result returns all last name records that match the search term.

Technology

Requirements

A plug-in for Dynamics 365 Sales automatically calculates the total billed time from all activities on a particular customer account, including sales representative visits, phone calls, email correspondence, and repair time compared with hours spent.

A shipping API displays shipping rates and tracking information on sales orders. The contract allows for 3,000 calls per month.

Ecommerce orders are processed in batch daily by using a manual import of sales orders in Dynamics 365 Finance.

Microsoft Teams is used for all collaboration.

All testing and problem diagnostics are performed in a copy of the production environment.

Customer satisfaction surveys are recorded with Microsoft Forms Pro. Survey replies from customers are sent to a generic mailbox.

Automation

A text message must be automatically sent to a customer to confirm an appointment and to notify when a technician is on route that includes their location.

Ecommerce sales orders must be integrated into Dynamics 365 Finance and then exported to Azure every night.

A text alert must be sent to employees scheduled to assist in the repair area of the retail store if the number of repair check-ins exceeds eight.

Submitted customer surveys must generate an email to the correct department. Approval and follow-up must occur within a week.

Reporting

The warehouse manager's dashboard must contain warehouse counting variance information.

A warehouse manager needs to quickly view warehouse KPIs by using a mobile device.

Power BI must be used for reporting across the organization.

User experience

Warehouse counting must be performed by using a mobile app that scans barcodes on boxes.

All customer repairs must be tracked in the system no matter where they occur.

Qualified leads must be collected from local bike fairs.

Issues

Warehouse counting must be performed by using a mobile app that scans barcodes on boxes.

All customer repairs must be tracked in the system no matter where they occur.

Qualified leads must be collected from local bike fairs.

Internal

User1 reports receives an intermittent plug-in error when viewing the total bill customer time.

User2 reports that Azure consumption for API calls has increased significantly to 100 calls per minute in the last month.

User2 reports that sales orders have increased.

User5 receives the error message: 'Endpoint unavailable' during a test of the technician dispatch ISV solution.

The parts department manager who is the approver for the department is currently on sabbatical.

External

CustomerB reports that the check-in app returned only one search result for their last name, which is not the correct name.

Nine customers arrive in the repair area of the retail store, but no texts were sent to scheduled employees.

Customers report that the response time from the information email listed on the Adventure Works Cycles website is greater than five days.

CustomerC requested additional information from the parts department through the customer survey and has not received a response one week later.

NEW QUESTION # 336

You are designing an integration between Dataverse and an external application. The external application processes thousands of records per day.

Record processing volumes vary throughout the day. Extremely high processing volumes may occur and may exceed the Dataverse service protection API limits.

You need to implement each service protection limit that is enforced.

Which implementations should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Service Protection Limit	Implementation
Number of requests	<ul style="list-style-type: none"> Number per user over a sliding window of time Number per environment over a sliding window of time Number per user per 24-hour period Number per environment per 24-hour period
Combined execution time	<ul style="list-style-type: none"> Combined time per user over a sliding window of time Combined time per user over a fixed window of time Combined time per environment over a sliding window of time Combined time per environment over a fixed window of time
Concurrent requests	<ul style="list-style-type: none"> Fixed number per user Fixed number per tenant Fixed number per application Fixed number per environment

Answer:

Explanation:

Service Protection Limit	Implementation
Number of requests	<ul style="list-style-type: none"> Number per user over a sliding window of time Number per environment over a sliding window of time Number per user per 24-hour period Number per environment per 24-hour period
Combined execution time	<ul style="list-style-type: none"> Combined time per user over a sliding window of time Combined time per user over a fixed window of time Combined time per environment over a sliding window of time Combined time per environment over a fixed window of time
Concurrent requests	<ul style="list-style-type: none"> Fixed number per user Fixed number per tenant Fixed number per application Fixed number per environment

NEW QUESTION # 337

You need to handle errors in UpdateRecord.js.

Which code segment should you add at line UR06?

- A.

```
Exception exception = Server.GetLastError();  
if(exception != null){
```
- B.

```
function (error){  
  console.log(error.message);}
```
- C.

```
catch(exception e){  
  console.WriteLine(e);}
```
- D.

```
catch(error) {  
  alert("Caught error: " + error.message);}
```

Answer: D

Explanation:

<https://docs.microsoft.com/en-us/powerapps/developer/model-driven-apps/clientapi/reference/xrm-webapi/updaterecord>

Topic 1, Bellows Sports

Overview

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Bellows Sports is the region's newest, largest, and most complete sports complex. The company features baseball and soccer fields and two full-size hockey rinks. The complex provides coaching, recreational leagues, a pro shop, and state-of-the art customer and player amenities.

The company is organized into the following divisions:

Baseball

Hockey

Soccer

Bellow Sports runs tournaments several times per year. Each tournament runs six weeks.

Current environment

Requirements

Bellow Sports tracks players and events in Microsoft Excel workbooks and uses email to communicate with players, partners, and prospective customers. The company uses a proprietary cloud-based accounting system.

The company relies on referrals from athletes for new business. Bellows uses a third-party marketing company to gather feedback and referrals from athletes. The third-party marketing company uploads a Microsoft Excel file containing lists of potential customers and players to the FTP site that Bellows Sports maintains.

Tournaments

Customer information is stored in the Accounts entity. Each tournament record must list the associated sales representative as the tournament owner. When team members create tournament records they must enter the start date for a tournament. The end date of the tournament must be automatically calculated.

Registration form

You must create a form to allow players to register for tournaments. The registration form must meet the following requirements:

Division	Requirement
Baseball	Capture the age and weight of the player. The height field must not display.
Hockey	Capture the age, height, and weight of the player.
Soccer	Capture the age of the player. The height and weight fields must not display.

Each division has tournaments that take place in specific locations. Users must be able to select the division for a tournament location.

Information about upcoming tournaments must be pre-located into the registration form when the registration form loads.

The form must include a custom button that sends an email confirmation to the player after the player registers.

The button must not be visible until after the form is saved.

Security

The company identifies the following job roles:

Role	Tasks
Sales representative	These users will enter data into Dynamics 365 Customer Service.
Intern	These users will create Power Apps apps, and connectors, and create Power Automate flows.
Manager	These users will add users, assign security roles, and manage data storage.

You must grant users the minimum permissions required to perform their job tasks.

Data automation

Customer name must be added to Dynamics 365 Finance automatically after it is entered.

You must produce a report that details the number of registrations for a day and send the report as a PDF to the management team.

You must implement mechanisms to handle all code-related errors.

When a customer record is updated, the system must look up the account number for the customer in the accounting system.

Referrals must be imported into the system as soon as they are available.

Issues

Apps

The captions for the New and Save buttons do not render properly on the form.

Interns can create apps but cannot interact with their own data.

Portal

The query for all registered users must return the data categorized by division. Queries must return only the Name and Sport fields.

Queries return all fields. The query is as follows:

```
GET [Organization URI]/api/data/v9.1/accounts?
&$orderby=Name, sport
&$filter=sport ne null
```

Solution checker issues

You run solution checker and observe Plug-in or workflow activity errors in the following code sets:

Set	Code	Error message
Code set 1	CS101 var columns = new ColumnSet(); CS102 columns.AllColumns = true; CS103 var query = new QueryExpression("account"); CS104 query.ColumnSet = columns; CS105 var results = service.RetrieveMultiple(query);	il-specify- column
Code Set 2	CS201 WebRequest request = WebRequest.Create ("https://www.bellows.com/api/stuff"); CS202 HttpWebResponse response = new HttpWebResponse(); CS203 CS204 response = request.GetResponse(); CS205 response.Close();	il-turn-off- keepalive

Code

The following code runs when the registration form loads. You must implement a mechanism to handle errors that occur in the code:

`UpdateRecord.js` (Line numbers are included for reference only.)

```
UR01
UR02 var data =
UR03     {
UR04         "name" : "Updated Account",
