2026 Perfect New Fire-Inspector-II Test Fee | 100% Free Valid 67 - Fire Inspector II Exam Exam Test

Providing our customers with up to 1 year of free International Code Council Fire-Inspector-II questions updates is also our offer. These International Code Council Fire-Inspector-II free dumps updates will help you prepare according to the latest Fire-Inspector-II test syllabus in case of changes. 24/7 customer support is available at ExamsLabs to assist users of the Fire-Inspector-II Exam Questions through the journey. Above all, ExamsLabs also offers a full refund guarantee (terms and conditions apply) to our customers. Don't miss these amazing offers. Download Fire-Inspector-II actual exam Dumps today!

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q67-Q72):

NEW QUESTION # 67

Platforms used for access to aboveground tanks storing flammable or combustible liquids shall be:

- **A. built of noncombustible construction.**
- B. built of nonferrous, nonsparking metal.
- C. located no closer than 3 ft. to the side of the tank.
- D. at least 4 ft. wide.

Answer: A

Explanation:

Platforms used for access to aboveground tanks storing flammable or combustible liquids are regulated by 2021 IFC, Section 5704 - Storage of Flammable and Combustible Liquids.

IFC 5704.2.7.4 - Access to Aboveground Tanks:

"Platforms, ladders, and stairways providing access to aboveground tanks storing flammable or combustible liquids shall be of noncombustible construction." This ensures that in case of fire, the access structures do not contribute to the spread of flames.

Why Other Options Are Incorrect?

A). At least 4 ft. wide. - The IFC does not specify a required width for platforms.

C). Built of nonferrous, nonsparking metal. - While important in hazardous areas, this is not a general requirement for platforms accessing aboveground tanks.

D). Located no closer than 3 ft. to the side of the tank. - There is no specific 3-ft. clearance requirement in the IFC for platforms.

Correct answer: B. Built of noncombustible construction.

NEW QUESTION # 68

Keys necessary for the unlocking of exit doors must be individually identifiable by both sight and touch in which of the following occupancies?

- A. Group E occupancies
- B. Group A occupancies
- **C. Group I occupancies**
- D. Group R occupancies

Answer: C

Explanation:

In Group I occupancies (such as hospitals, nursing homes, and correctional facilities), keys necessary for unlocking exit doors must be individually identifiable by both sight and touch. This ensures quick identification of keys in an emergency, especially for staff members assisting occupants with limited mobility.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 1010.1.9.9 (Identifiable Keys for Exit Doors in Group I Occupancies) IFC 1010.1.9.9 specifically states that in Group I occupancies, all keys used to unlock exit doors must be uniquely identifiable by both sight and touch.

This helps staff quickly locate and use the correct key in an emergency evacuation.

2. NFPA 101 - Life Safety Code (2021 Edition) - Section 18.2.2.2.6 (Key Identification in Institutional Occupancies) NFPA 101 mandates that keys in healthcare and correctional facilities (Group I) must be distinguishable by touch and sight for emergency use.

Detailed Explanation of Answer Choices:

Option A (Incorrect): Group A occupancies (Assembly) do not have this requirement.

Option B (Incorrect): Group E occupancies (Educational) do not have this specific key-identification mandate.

Option C (Correct): Group I occupancies (Institutional) require individually identifiable keys per IFC 1010.1.9.9.

Option D (Incorrect): Group R occupancies (Residential, such as apartments and hotels) do not have this specific requirement.

Thus, the correct and verified answer is: C. Group I occupancies.

NEW QUESTION # 69

Quantities of flammable liquid storage in a control area of an Industrial Occupancy may be doubled when:

- **A. the building is protected with automatic sprinklers.**
- B. the control area is provided with exhaust ventilation in accordance with fire code requirements.
- C. permission is granted by the chief.
- D. the control area exceeds 50,000 sq. ft.

Answer: A

Explanation:

Flammable Liquid Storage Limits in Control Areas

According to the International Fire Code (IFC) 2021, Section 5003.1.1 and Table 5003.1.1(1), the allowable quantity of flammable liquids stored in a control area can be doubled if the building is equipped with an automatic sprinkler system that complies with NFPA 13.

2. Why Automatic Sprinklers Allow Increased Storage

A sprinkler system significantly reduces fire risk by suppressing flames early, thus allowing greater quantities of hazardous materials to be safely stored.

IFC and NFPA 30 (Flammable and Combustible Liquids Code) specify that sprinkler-protected buildings can have up to twice the standard storage limits.

3. Verification of Other Options

Option A (permission is granted by the chief) - Incorrect, as storage limits are regulated by the fire code, not discretionary approval from the fire chief.

Option B (the control area exceeds 50,000 sq. ft.) - Incorrect, as floor area does not automatically allow for increased storage unless fire protection systems are in place.

Option D (the control area is provided with exhaust ventilation) - Incorrect, because ventilation is required for hazardous material control but does not impact storage limits like sprinklers do.

Reference Sources:

International Fire Code (IFC) 2021 - Section 5003.1.1 & Table 5003.1.1(1) (Control Area Storage Limits for Flammable Liquids)

NFPA 30: Flammable and Combustible Liquids Code (Sprinkler-Adjusted Storage Quantities) ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: C. the building is protected with automatic sprinklers. #

NEW QUESTION # 70

According to the fire code, when compliance is not immediate, inspection reports of code violations must always include a description of the violation and which of the following?

- A. The potential fines for noncompliance
- B. The reinspection date
- C. The mandatory court date
- **D. Recommended corrective action**

Answer: D

Explanation:

When fire inspectors identify code violations, the inspection report must include a description of the violation along with a recommended corrective action. This ensures that the responsible party understands what steps need to be taken to bring the property into compliance.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 109.3 (Notice of Violation) IFC 109.3 requires that any notice of violation must include a description of the violation and the necessary corrective action.

The intent is to provide clear guidance on how to remedy the issue to meet fire safety standards.

2. NFPA 1 - Fire Code (2021 Edition) - Section 1.7.6 (Enforcement and Documentation of Violations) NFPA 1, Section 1.7.6.1 states that violation reports must specify the corrective action required to comply with the fire code.

Detailed Explanation of Answer Choices:

Option A (Incorrect): While a reinspection date may be provided, it is not a mandatory component of an inspection report for code violations.

Option B (Incorrect): A mandatory court date is not always required; enforcement varies depending on jurisdiction and severity of the violation.

Option C (Correct): Recommended corrective action is required in all violation reports as per IFC 109.3 and NFPA 1.7.6.1.

Option D (Incorrect): Potential fines for noncompliance are determined separately and are not necessarily included in the initial violation report.

Thus, the correct and verified answer is: C. Recommended corrective action.

NEW QUESTION # 71

What fire-resistance rating is required for interior nonbearing wall and partitions in Type IV construction?

- A. 1 hour

- B. 1-1/2 hours
- **C. 0 hours**
- D. 2 hours

Answer: C

Explanation:

The fire-resistance rating requirements for different building elements in Type IV (Heavy Timber) construction are specified in the 2021 International Building Code (IBC), Table 601 - Fire-Resistance Rating Requirements for Building Elements (Hours).

IBC Table 601 - Fire Resistance for Type IV Construction:

Interior nonbearing walls and partitions in Type IV construction require 0 hours of fire resistance.

This is because Type IV construction primarily relies on large, heavy timber elements that provide inherent fire resistance.

Why Other Options Are Incorrect?

B: 1 hour - Incorrect, as nonbearing interior walls in Type IV construction are not required to have a fire- resistance rating.

C: 1-1/2 hours - Not required by code.

D: 2 hours - Only structural elements like exterior walls in some cases may require fire resistance, but nonbearing interior partitions do not.

NEW QUESTION # 72

.....

By focusing on how to help you effectively, we encourage exam candidates to buy our Fire-Inspector-II practice test with high passing rate up to 98 to 100 percent all these years. Our Fire-Inspector-II exam dumps almost cover everything you need to know about the exam. As long as you practice our Fire-Inspector-II test question, you can pass exam quickly and successfully. By using them, you can not only save your time and money, but also pass Fire-Inspector-II Practice Exam without any stress. Before you place orders, you can download the free demos of Fire-Inspector-II practice test as experimental acquaintance.
