

# Analytics-DA-201 Valid Test Dumps | Reliable Analytics-DA-201 Exam Sims

2026 Latest Lead2Passed Analytics-DA-201 PDF Dumps and Analytics-DA-201 Exam Engine Free Share:  
[https://drive.google.com/open?id=1lt5wNUk8\\_EYk-qFOBusCS0CtpZOnJ2YL](https://drive.google.com/open?id=1lt5wNUk8_EYk-qFOBusCS0CtpZOnJ2YL)

If you are clueless about the oncoming exam, our Analytics-DA-201 guide materials are trustworthy materials for your information. More than tens of thousands of exam candidate coincide to choose our Analytics-DA-201 practice materials and passed their exam with satisfied scores, a lot of them even got full marks. According to the data that are proved and tested by our loyal customers, the pass rate of our Analytics-DA-201 Exam Questions is high as 98% to 100%.

If you get the Analytics-DA-201 certification, your working abilities will be proved and you will find an ideal job. We provide you with Analytics-DA-201 exam materials of high quality which can help you pass the exam easily. We provide you with Analytics-DA-201 exam materials of high quality which can help you pass the exam easily. It also saves your much time and energy that you only need little time to learn and prepare for exam. We also provide timely and free update for you to get more Analytics-DA-201 Questions torrent and follow the latest trend. The Analytics-DA-201 exam torrent is compiled by the experienced professionals and of great value.

## The Best Accurate Analytics-DA-201 Valid Test Dumps - 100% Pass Analytics-DA-201 Exam

Analytics-DA-201 is the authentic study guides with the latest exam material which can help you solve all the difficulties in the actual test. Our Analytics-DA-201 free demo is available for all of you. You will receive an email attached with the Analytics-DA-201 training dumps within 5-10 minutes after completing purchase. Immediately download for the Analytics-DA-201 study pdf is available for study with no time wasted. We have money refund policy to ensure your interest in case the failure of Analytics-DA-201 actual test.

## Salesforce Certified Tableau Data Analyst Sample Questions (Q88-Q93):

### NEW QUESTION # 88

You have the following dashboard.

From the context menu of Sales over time, select Ignore Actions.

Several Lays later, you decide that you want to filter both Sales over time and Detail table by selecting a data point on the map. What should you do?

- A. From the context menu of Profits by state, deselect Use as Filter and then select Use as Filter.
- B. From the context menu of Sales over time, select Use as Filter and then deselect Use as Filter
- C. From the context menu of Sales over time, select Filters and then select Enable Auto Update.
- D. From the context menu of Detail table, select Ignore Actions.

Answer: A

#### NEW QUESTION # 89

A Data Analyst creates the following story that contains two story points.

The analyst wants to change the story point format to show the current story point number out of the total number of story points. Which Layout option should the analyst use?

- A. Dots
- B. Numbers
- C. Arrows only
- D. Caption boxes

Answer: C

#### NEW QUESTION # 90

You have the following dataset.

When you use the dataset in a worksheet, you want Sales to appear automatically as shown in the following table. What should you do?

- A. Create a calculated field that uses a formula of 'S' + str((Sales)/1000).
- B. Create a calculated field that uses a formula of 'S' \* str(Round((sales),2)) + 'k'
- **C. Change the default number format of the Sales field**
- D. Change the data type of the Sales field to String

**Answer: C**

Explanation:

To make Sales appear automatically as shown in the second table, you should change the default number format of the Sales field. The default number format is how Tableau displays a field when you drag it to a worksheet. You can change the default number format by right-clicking on the field and selecting Default Properties > Number Format from the menu. This will open a dialog box where you can choose a category, such as Currency or Percentage, and customize the options, such as decimal places or prefixes. In this case, you want to change the default number format of Sales to Currency with zero decimal places and a custom prefix of "S". This will make Sales appear as "S" followed by the rounded value in thousands.

The other options are not correct for this scenario. Changing the data type of Sales to String will not affect how it appears on a worksheet. Creating a calculated field that uses a formula will not change the default number format of Sales, but create a new field that you have to drag to a worksheet. Converting Sales to Attribute will return only one value for each partition of data, which will not show any variation over time.

References: <https://help.tableau.com/current/pro/desktop/en-us/formatting.htm> [https://help.tableau.com/current/pro/desktop/en-us/formatting\\_change\\_default.htm](https://help.tableau.com/current/pro/desktop/en-us/formatting_change_default.htm)

To achieve the formatting as shown in the example, where sales figures are displayed with a "K" to represent thousands and rounded to the nearest thousand (e.g., \$20K, \$44K, etc.), you would need to adjust the default number format of the Sales field in Tableau. By changing the default number format, every instance where the Sales field is used would automatically reflect this new formatting. This is more efficient than creating a calculated field as it preserves the numeric nature of the field, allowing for further numerical operations and aggregations.

## NEW QUESTION # 91

You have a dataset that contains sales data. The following is a sample of the data.

Month Year	Sales
February 2020	\$20,301
April 2020	\$38,522
January 2020	\$43,871
May 2020	\$44,261
July 2020	\$45,264
June 2020	\$52,982
March 2020	\$58,872
August 2020	\$63,121
October 2020	\$77,777
December 2020	\$83,829
September 2020	\$87,867
November 2020	\$118,448

You need to return a value of true if a month has sales greater than \$50,000. otherwise the formula must return a value of false.

Which two formulas achieve the goal Choose two

- A. MAX< [Sales], 50000)
- **B. IIF(SUM< [Sales] >50000, TRUE, FALSE)**
- **C. [Sales] > 50000**
- D. SUM{[Sales]} IN (50000)

**Answer: B,C**

Explanation:

The two formulas that will return a value of true if a month has sales greater than \$50,000, otherwise the formula must return a value of false, are:

B). IIF(SUM([Sales]) > 50000, TRUE, FALSE) D. [Sales] > 50000

The IIF function is a logical function that returns one value if a condition is true, and another value if the condition is false. In this case, the condition is SUM([Sales]) > 50000, which means that the sum of sales for a month is greater than \$50,000. The function will return TRUE if the condition is true, and FALSE if the condition is false.

The comparison operator > is a logical operator that returns TRUE if the left operand is greater than the right operand, and FALSE otherwise. In this case, the operands are [Sales] and 50000, which means that the sales for a month are greater than \$50,000. The

operator will return TRUE if the sales are greater than \$50,000, and FALSE otherwise.

The other options are not correct for this scenario. The IN function is a logical function that returns TRUE if a value is in a set of values, and FALSE otherwise. In this case, the value is SUM([Sales]), which is not in the set of values (50000). The function will always return FALSE. The MAX function is an aggregation function that returns the maximum value in a field or expression. In this case, the field or expression is [Sales], 50000, which is not valid syntax. The function will return an error. References:

### NEW QUESTION # 92

You have the following chart that shows profits and discounts over time.

You need to combine the lines to appear as shown in the following chart.

What should you do?

- A. Drag Discount to Color on the Marks card
- B. Convert Discount to Discrete
- C. Drag Discount to the Columns shelf
- **D. Set Discount to Dual Axis**

**Answer: D**

Explanation:

To combine the lines to appear as shown in the second chart, you should set Discount to Dual Axis. Dual Axis is a feature that allows you to show two measures on two separate axes on one chart. You can create a dual axis by right-clicking on a measure on any shelf and selecting Dual Axis from the menu. This will create two axes on one chart and synchronize their scales.

In this case, you want to show Profit and Discount on two separate axes on one chart. You can right-click on Discount on any shelf and select Dual Axis from the menu. This will create a dual axis chart that shows Profit and Discount as two lines with different colors.

The other options are not correct for this scenario. Dragging Discount to Color on the Marks card will change the color of Profit based on Discount, but it will not show two lines. Converting Discount to Discrete will change Discount from a green pill to a blue pill, but it will not affect how it appears on the chart. Dragging Discount to Columns shelf will create two separate charts for Profit and Discount, but it will not combine them.
