Salesforce-Certified-Administrator Exam Tests the candidates on various aspects of Salesforce administration, including user management, security, data management, automation, and reporting.

Salesforce Certified Administrator Sample Questions (Q88-Q93):

NEW QUESTION # 88

The Marketing team at Cloud Kicks uses campaigns to generate product interest. They want custom picklist values for the campaign member Status field for each campaign they run, currently, they ask the administrator to add or delete values, but this is very time consuming.

Which two user permission should allow the Marketing team to customize the campaign member status picklist values themselves? Choose 2 answers

- **A. Edit permission for campaigns**
- B. Create and Edit for Campaign Member
- **C. Marketing user feature license**
- D. Customize Application permission

Answer: A,C

Explanation:

Explanation

To customize the campaign member status picklist values themselves, marketing users need two things: a marketing user feature license and edit permission for campaigns. A marketing user feature license enables users to create, edit, and delete campaigns; manage campaign members; and update campaign history via the import wizards or API. Edit permission for campaigns allows users to modify existing campaigns and their related records such as campaign members and campaign member statuses. References:

NEW QUESTION # 89

Cloud Kicks has asked the administrator to test a new screen flow that create contacts.

What are two key components of testing the flow?

Choose 2 answers

- A. Set Up a flow interview to test the flow.
- **B. Run the flow using it to create contacts.**
- **C. Use Debug to test the flow in Flow Builder.**
- D. Test the flow in a sandbox.

Answer: B,C

Explanation:

Explanation

Running the flow using it to create contacts and using debug to test the flow in Flow Builder are two key components of testing a new screen flow that creates contacts. Running the flow allows the administrator to see how the flow behaves in real time and check for any errors or unexpected results. Debugging the flow allows the administrator to simulate how the flow runs with different inputs and outputs and check for any logic or syntax errors. Setting up a flow interview or testing the flow in a sandbox are not necessary for testing a screen flow that creates contacts. References:

NEW QUESTION # 90

The Call centre manager in Ursa Major Solar wants to provide agents with a case dashboard that can be drilled down by case origin, status and owner.

What should an Administrator add to the dashboard to fulfill the request?

- **A. Dashboard Filter**
- B. Dashboard component
- C. Combination Chart
- D. Bucket column

Answer: A

Explanation:

Explanation

A dashboard filter is a feature that allows users to filter dashboard components by one or more field values without changing the underlying report data. For example, a dashboard filter can allow users to view cases by origin, status, or owner. A dashboard filter consists of a filter name, one or more source fields, and one or more filter values. Users can apply one or more filters to see different views of the dashboard data.

NEW QUESTION # 91

The administrator at Cloud Kicks writes an assignment rule to send all cases created via email or the web to the Automated Cases Queue. Any manually created cases should be owned by the agent creating them, however, the manually created cases now show the administrator as the owner.

What will the administrator find when troubleshooting this issue?

- A. The Owner field is missing on the webform and email template.
- **B. The Assignment Rule checkbox is selected by default.**
- C. Another assignment rule is giving ownership to the administrator
- D. An escalation rule is changing the case owner on case creation

Answer: B

Explanation:

Explanation

The Assignment Rule checkbox is a checkbox that appears on manual case creation pages when assignment rules are defined for cases. The Assignment Rule checkbox determines whether or not to apply assignment rules to manually created cases. If the Assignment Rule checkbox is selected by default, then any manually created cases will be assigned according to assignment rules instead of being owned by the agent creating them. To prevent this from happening, an administrator can either deselect the Assignment Rule checkbox when creating cases manually; or change the default setting for this checkbox under setup by selecting or deselecting Use active assignment rules by default. NEW QUESTION # 92

The administrator for AW Computing is working with a user who is having trouble logging in to Salesforce.

What should the administrator do to identify why the user is unable to log in?

- **A. Review the login history for the user.**
- B. Pull the password history to ensure the password policy was followed.
- C. Check the attempted logins by running the setup audit trail.
- D. Reset the security token for the profile.

Answer: A
