Health-Cloud-Accredited-Professional 높은 통과율 인기 시험자료 완벽한 시험덤프

인터넷에 검색하면 Salesforce Health-Cloud-Accredited-Professional 시험덤프 공부자료가 헤아릴 수 없을 정도로 많이 검색됩니다. 그중에서 PassTIP의 Salesforce Health-Cloud-Accredited-Professional 제품이 인지도가 가장 높고 가장 안전하게 시험을 패스하도록 지름길이 되어드릴 수 있습니다.

최신 Salesforce Health Cloud Health-Cloud-Accredited-Professional 무료 샘플 문제 (Q100-Q105):

질문 # 100

Which Three items can be a Life Science company track about a Care Programs using Program Management? (Choose Three. (Repeated question)

- A. The budget & Expenses of the company's associate Care Program
- B. The products that are associate with a given Care Program
- C. The plans that enrollees have been engaged in as part of the care program
- D. The multiple marketing campaigns that enrollees are subjected to as part of the Care Program
- E. The clinical indicators that need to be monitored in the care programs

정답: B,C,D

질문 # 101

Bloomington Caregivers is currently in the process of updating its systems as part of a corporate-wide digital transformation initiative. Which two considerations should a consultant include when configuring security, sharing, and visibility rules in Health Cloud to meet a healthcare organization's needs?
Choose 2 answers

- A. Regularly review and update security, sharing, and visibility settings in Health Cloud to align with evolving needs, regulations, and organizational policies.
- B. Ensure that data mask is used in production to appropriately manage protected health information (PHI).
- C. Review Salesforce documentation and implement a standardized security and visibility model.
- D. Understand customer needs, data security, privacy concerns, regulatory compliance, and sharing or visibility restrictions.

정답: B,D

질문 # 102

A customer is looking to implement Discovery Framework to manage their intake and clinical assessments. Which three capabilities should a consultant configure with Health Cloud out-of-the-box to enhance their assessment functionality?
Choose 3 answers

- A. Adding a QR Code
- B. SMS Assessment Completion
- C. FHIR Question Bank
- D. Digital Signature Capture
- E. Using Previously Submitted Responses

정답: C,D,E

설명:

The Discovery Framework in Salesforce Health Cloud is designed to streamline intake and clinical assessment processes by leveraging configurable and reusable components. Below is a detailed explanation of the correct options:

Correct Capabilities:

FHIR Question Bank (C):

Health Cloud supports the integration of FHIR (Fast Healthcare Interoperability Resources) standards for clinical data management. The FHIR Question Bank allows healthcare organizations to utilize predefined, standards-compliant question sets for assessments. This ensures uniformity and compliance with healthcare regulations.

Digital Signature Capture (D):

Salesforce Health Cloud enables capturing digital signatures to confirm the completion and accuracy of assessments, which is often required for compliance or legal documentation.

Using Previously Submitted Responses (E):

Health Cloud supports dynamic assessments that can reference and reuse responses from previously submitted assessments. This enhances efficiency, prevents redundancy, and reduces patient burden.

Why Other Options Are Incorrect:

A . Adding a QR Code:

QR codes are not a standard out-of-the-box feature for assessments in Salesforce Health Cloud. While QR codes can be custom-implemented, they are not directly relevant to the Discovery Framework.

B . SMS Assessment Completion:

SMS-based assessment completion is not an out-of-the-box feature of Health Cloud. It requires customization or integration with third-party messaging solutions to achieve this functionality.

질문 # 103

A provider is looking to view a patient's insurance coverage, including co-pay and deductible information, prior to their appointment. Using Health Cloud, which two steps should a consultant take to access this information in the Benefit Verification component?

Choose 2 answers

- A. Create a named credential to support authenticated callouts.
- B. Create a new record for the HCBenVerConnect custom setting.
- C. Configure the Connection Label with the source system's API details.
- D. Configure the link to the clearinghouse's endpoint using a Uniform Resource Identifier (URI) path.

정답: A,C

설명:

To access a patient's insurance coverage, co-pay, and deductible information in the Benefit Verification component of Health Cloud, you need to integrate with external systems (e.g., payers or clearinghouses).

Health Cloud provides the Benefit Verification component, which relies on secure API integrations for real-time eligibility and benefits checks.

Step-by-Step Reference:

* Configure the Connection Label with the source system's API details:

* Extract:

"In Benefit Verification setup, specify the Connection Label and configure the external endpoint and API details to connect to the benefit verification source system." (Source: Administer Health Cloud - Benefit Verification Setup)

* Create a named credential to support authenticated callouts:

* Extract:

"Use Named Credentials to securely store authentication settings and endpoint information for callouts to external services (such as clearinghouses or payers) required for benefit verification." (Source: Salesforce Security Guide and Administer Health Cloud - Benefit Verification)

* Why not A or B?

* The HCBenVerConnect custom setting is not part of the standard configuration for the out-of-the-box Benefit Verification component.

* Configuring a URI path alone (without API details and credentials) does not enable secure, authenticated communication.

질문 # 104

Bloomington Caregivers want to offer its patients remote monitoring to bring data from patient devices into Health Cloud. Which set of records should an administrator populate to implement this functionality?

- A. Code Sets, Units of Measure, Care Metric Targets, Care Observations
- B. Units of Measure, Code Sets, Remote Monitoring Device Types, Care Episodes
- C. Code Sets, Biometrics, Care Observations, Chart Metrics
- D. Units of Measure, Remote Monitoring Device Types, Care Observations, Code Sets

정답: A

설명:

To implement remote monitoring functionality in Health Cloud, an administrator should populate the following records:

Code Sets: These are records that define the codes and descriptions for various types of data, such as care metrics, care observations, or units of measure. Code sets help standardize the data and enable interoperability with external systems¹.

Units of Measure: These are records that define the units of measurement for various types of data, such as weight, blood pressure, or temperature. Units of measure help convert the data into a common format and enable comparison and analysis².

Care Metric Targets: These are records that define the target values or ranges for various types of care metrics, such as blood glucose level, heart rate, or oxygen saturation. Care metric targets help monitor the patient's health status and identify any deviations or risks³.

Care Observations: These are records that store the data collected from patient devices, such as blood pressure monitors, glucose meters, or pulse oximeters. Care observations help track the patient's health progress and provide insights for care management⁴.

Remote Monitoring Device Types, Biometrics, Chart Metrics, or Care Episodes are not records that are required for remote monitoring functionality.

질문 # 105

.....

IT업계에서 자신만의 위치를 찾으려면 자격증을 많이 취득하는 것이 큰 도움이 될 것입니다. Salesforce 인증 Health-Cloud-Accredited-Professional 시험은 아주 유용한 시험입니다. Salesforce 인증 Health-Cloud-Accredited-Professional 시험 출제경향을 완벽하게 연구하여 PassTIP에서는 Salesforce 인증 Health-Cloud-Accredited-Professional 시험 대비덤프를 출시하였습니다. PassTIP에서 제공해드리는 Salesforce 인증 Health-Cloud-Accredited-Professional 시험덤프는 시장에서 판매하고 있는 Salesforce 인증 Health-Cloud-Accredited-Professional 덤프 중 가장 최신버전덤프로서 덤프에 있는 문제만 공부하시면 시험통과가 쉬워집니다.
