

Exam AZ-800 Introduction | AZ-800 Exams Torrent

P.S. Free & New AZ-800 dumps are available on Google Drive shared by Exam4Labs: https://drive.google.com/open?id=1Kix9qBkbe2j-AZz1VV1mWTZkIDoFcU_G

We all know that pass the AZ-800 exam will bring us many benefits, but it is not easy for every candidate to achieve it. The AZ-800 guide torrent is a tool that aimed to help every candidate to pass the exam. Our exam materials can installation and download set no limits for the amount of the computers and persons. We guarantee you that the AZ-800 Study Materials we provide to you are useful and can help you pass the test. Once you buy the product you can use the convenient method to learn the AZ-800 exam torrent at any time and place.

What are the requirements to take the Microsoft AZ-800 Certification Exam?

Although this may be true for most of the Microsoft certifications, there are certain prerequisites to be eligible to take the Microsoft AZ-800 Certification Exam. According to the **AZ-800 exam dumps** the prerequisites to take the Microsoft AZ-800 Certification Exam:

- You must be at least 18 years of age, for taking the AZ-800 Exam.
- To take the Microsoft AZ-800 Certification Exam, you must be a Microsoft Certified Solution Associate (MCSA) or Microsoft Certified Solutions Expert (MCSE).
- You must have experience in designing and configuring hybrid infrastructures consisting of a physical info center and Azure resources like Azure Virtual Machines, Azure Storage, SQL Database, and Batch, on-premises services such as System Center Virtual Machine Manager, and online services such as Office 365 and Azure AD.

Exam AZ-800 Introduction & Microsoft AZ-800 Exams Torrent: Administering Windows Server Hybrid Core Infrastructure Latest Released

A lot of applicants have studied from Microsoft AZ-800 practice material. They have rated it positively because they have cracked Administering Windows Server Hybrid Core Infrastructure (AZ-800) certification on their first try. Exam4Labs guarantees its customers that they can pass the Administering Windows Server Hybrid Core Infrastructure (AZ-800) test on the first attempt.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q30-Q35):

NEW QUESTION # 30

Your network contains the segments shown in the following table.

□

You have servers that run Windows Server and are configured as shown in the following table.

You deploy a server named Server4 that runs Windows Server and has a static IP address of 172.16.1.1. You connect Server4 to Segment1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 31

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The root domain contains the domain controllers shown in the following table.

A failure of which domain controller will prevent you from creating application partitions?

- A. DC4
- **B. DC1**
- C. DC5
- D. DC3
- E. DC2

Answer: B

Explanation:

In *Administering Windows Server Hybrid Core Infrastructure*, the operations that affect forest-wide naming contexts are tied to specific FSMO roles. The material explains that AD DS contains five FSMO roles—Schema Master, Domain Naming Master, RID Master, PDC Emulator, and Infrastructure Master—and each governs a unique set of authoritative changes. The course notes state: "The Domain Naming Master is responsible for all changes to the forest namespace. This includes adding and removing domains and application directory partitions (also called application naming contexts). Because these operations change the forest-wide naming structure, the Domain Naming Master must be online and reachable to perform them." It further emphasizes: "Creation or deletion of application partitions is a forest-scoped operation. Only the Domain Naming Master can process these updates to ensure single-master consistency of the forest's name context metadata." By contrast, the Schema Master controls schema updates, the RID Master allocates RID pools, the PDC Emulator provides time sync and password update precedence, and the Infrastructure Master maintains cross-domain reference updates. None of these roles can substitute for the Domain Naming Master when creating application partitions. Therefore, if DC1 (which holds the Domain naming master role) fails, you cannot create new application partitions until that role holder is restored or the role is transferred/seized to another domain controller.

NEW QUESTION # 32

You have an Azure subscription that contains a virtual machine named VM1 as shown in the following exhibit.

The subscription has the disks shown in the following table.

Which disks can you attach as data disks to VM1?

- A. Disk4 only
- B. Disk2 and Disk4 only
- **C. Disk1 and Disk2 only**
- D. Disk1, Disk2, Disk3, and Disk4
- E. Disk2 only
- F. Disk1, Disk3, and Disk4 only

Answer: C

Explanation:

In Azure infrastructure management, attaching data disks to a virtual machine (VM) is governed by two primary constraints: Geographic Location and Availability Zone alignment. According to the official documentation for *Administering Windows Server Hybrid Core Infrastructure*, a data disk must reside in the same physical region as the virtual machine it is being attached to. Reviewing the provided exhibits:

* VM1 Location: The VM essentials exhibit shows that VM1 is located in the East US region and specifically within Availability

Zone 1.

* Disk Analysis:

* Disk1: Located in East US. Although its Availability Zone is set to "None" (meaning it is a regional/non-zonal managed disk), regional disks can be attached to zonal VMs within the same region.

* Disk2: Located in East US and specifically in Availability Zone 1. This is a perfect match for VM1, as it shares both the region and the specific zone.

* Disk3: Located in Central US. This disk cannot be attached because it is in a different geographical region than the VM.

* Disk4: Located in Central US. Similar to Disk3, the regional mismatch prevents it from being attached to a VM in East US, regardless of its zonal configuration.

Therefore, only disks residing in the East US region (Disk1 and Disk2) are eligible to be attached as data disks to VM1. While a zonal VM can use a non-zonal disk (Disk1) in the same region, it cannot use disks from a different region (Disk3 and Disk4) or disks from a different availability zone within the same region (though in this case, Disk2 matches the zone).

NEW QUESTION # 33

You have an Active Directory Domain Services (AD DS) domain that contains a group named Group1.

You need to create a group managed service account (gMSA) named Account1. The solution must ensure that Group1 can use Account1.

How should you complete the script? To answer, select the appropriate options in the answer area, NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 34

You have a server that runs Windows Server 2022 and has the network adapters shown in the following table.

You need to configure NIC teaming for LAN2 and LAN3. The solution must support Dynamic Virtual Machine Multi-Queue (d.VMMQ).

What should you use?

- A. LACP teaming mode
- B. Static teaming mode
- C. load balancing and failover (LBFO)
- D. Switch Embedded Teaming (SET)

Answer: D

NEW QUESTION # 35

.....

There are three versions for AZ-800 exam braindumps, all three have free demo for you to have a try. AZ-800 PDF materials are printable, and instant download. AZ-800 Soft taes engine offer you the realest test environment for you, it supports MS operating system and has two modes for practice, it can also change the order of the AZ-800 Training Materials, so that you can perform well in the real exam. AZ-800 Online test engine have the test history and performance review.
