2026 Mule-Dev-202 Reliable Dumps | Reliable Salesforce Certified MuleSoft Hyperautomation Developer 100% Free Reliable Exam Online

Now our Mule-Dev-202 practice materials have won customers' strong support. Our sales volume is increasing every year. The great achievements benefit from our enormous input. First of all, we have done good job on researching the new version of the Mule-Dev-202 exam question. So you will enjoy the best learning experience every once in a while. Also, the quality of our Mule-Dev-202 Real Dump is going through the official inspection every year. So you can fully trust us. If you still have suspicion of our Mule-Dev-202 practice materials, you can test by yourself. Welcome to select and purchase.

If you are still headache about how to choose Mule-Dev-202 real questions, now stop! Do not be entangled with this thing. We should be the best wise select for every aspiring candidate who is ready for Mule-Dev-202 exams. We design three formats of our high-quality Mule-Dev-202 exam questions which satisfy different kinds of candidates' demands: PDF version, Soft Test Engine, Online Test Engine. These 3 formats of our Mule-Dev-202 training guide contain same questions and answers. Candidates can choose any version of our Mule-Dev-202 learning prep based on their study habits.

Reliable Mule-Dev-202 Exam Online | Exam Mule-Dev-202 Answers

The price for Mule-Dev-202 learning materials is quite reasonable, and no matter you are a student or you are an employee, you can afford them. Besides, we offer you free demo to have a try, and through free demo, you can know some detailed information of Mule-Dev-202 Exam Dumps. With experienced experts to compile and verify, Mule-Dev-202 learning materials are high quality. Besides, Mule-Dev-202 exam dumps contain both questions and answers, and you check your answers quickly after practicing.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q44-Q49):

NEW QUESTION # 44
Northern Trail Outfitters develops an API to look up manufacturer rebates. This API will be consumed internally by the website's backend and the RPA boots used by its customer service representatives.
How should this API be shared within the organization?

- A. Example assets should be published to the private Exchange.
- B. The API asset should be published to the private Exchange portal.
- C. The API asset should be published to the public Exchange portal.
- D. The API's RAML specification should be stored in a SharePoint repository.

Answer: B

Explanation:
To effectively share an API internally within an organization, publishing the API asset to the private Exchange portal is the best

approach:
Private Exchange Portal:
The private Exchange portal within MuleSoft Anypoint Platform is designed for sharing APIs, connectors, templates, and other assets within an organization. It provides a central repository that is accessible to all relevant teams and departments.
Access Control and Security:
By using the private Exchange, you can control access to the API, ensuring that only authorized internal users, such as the website's backend team and customer service representatives using RPA bots, can consume it.
Ease of Use:
Publishing to the private Exchange makes it easy for internal teams to discover, access, and reuse the API, promoting consistency and reducing duplication of effort.

MuleSoft Anypoint Exchange Documentation

NEW QUESTION # 45
A Salesforce administrator asks for advice on how to build their Salesforce flow. They need to complete several DML actions as part of their Salesforce flow and are running into DML governor limits during testing.
Which two pieces of advice should be given to the Salesforce administrator to improve their flow? (Choose two.)

- A. Loop through a collection variable to save more records with a single DML statement.
- B. Use DML statements at the end of the flow wherever possible.
- C. Avoid putting DML statements inside of For Loop occurrences.
- D. Use the upsert action to reduce the amount of DML statements required during the flow runtime.

Answer: A,C

Explanation:
Avoid DML in For Loops:Placing DML (Data Manipulation Language) operations inside a loop can quickly exceed Salesforce governor limits, as each iteration performs a separate DML operation. It's best to collect records in a list and perform DML operations outside the loop.
Reference:Salesforce Governor Limits
Use Collection Variables:By looping through a collection variable and adding records to it, you can perform bulk DML operations, which are more efficient and less likely to hit governor limits.
Reference:Apex Collections and Bulk Processing
Use Upsert Action:Using the upsert action can reduce the number of DML statements by combining insert and update operations. However, this strategy depends on the specific flow requirements and data structure.
Reference:Salesforce Upsert Operation
DML Statements at the End:Consolidating DML operations to the end of the flow is advisable, but care should be taken to handle errors and exceptions appropriately.
Reference:Error Handling in Flows

NEW QUESTION # 46
AnyAirlines has MuleSoft Composer installed on their production Salesforce environment.
To test flows with data in multiple non-production environments, what does the hyperautomation specialist need to do?

- A. Install MuleSoft Composer in each of the non-production Salesforce environments.
- B. Create a connection to each of the non-production environments within the Composer UI.
- C. Install MuleSoft Composer in only one non-production Salesforce environment and create a proxy to all other non-production environments.
- D. Use mocked data because non-production data is not available to MuleSoft Composer.

Answer: B

Explanation:
Create Connections:To test flows with data in multiple non-production environments, creating connections to each environment within the MuleSoft Composer UI is necessary. This allows the Composer to access and manipulate data across different environments, ensuring comprehensive testing.
Reference:MuleSoft Composer Connections
Installing Composer in Non-Production Environments:While installing Composer in each environment is technically possible, creating individual connections is more efficient and aligns with best practices.

Reference:Composer Setup and Configuration
Using Mocked Data:Mocked data can be useful for initial testing, but connecting to actual non-production environments provides more realistic test scenarios.
Reference:Testing with Mock Data
Proxy Setup:Creating a proxy to other environments is complex and unnecessary when Composer supports direct connections.
Reference:Proxy Configuration

NEW QUESTION # 47

AnyAirlines selected AWS Cloud services as their infrastructure platform. They need to implement Anypoint Platform as the integration solution along with existing cloud capabilities like vertical/horizontal scalability and zero downtime redeployments. Which type of deployment strategy is needed?

- A. Runtime Fabric
- B. Private Cloud Edition
- C. Cloudhub
- D. Hybrid

Answer: A

Explanation:
Anypoint Runtime Fabric:Anypoint Runtime Fabric (RTF) is designed for deploying Mule applications on any cloud infrastructure, including AWS. It supports vertical and horizontal scalability and enables zero- downtime deployments, which aligns with AnyAirlines' requirements.
Reference:Anypoint Runtime Fabric Overview
Vertical/Horizontal Scalability:RTF allows scaling applications both vertically (adding more resources to existing nodes) and horizontally (adding more nodes to the cluster). This ensures high availability and performance.
Reference:Runtime Fabric Scalability
Zero Downtime Deployments:RTF supports zero-downtime deployments by utilizing rolling updates and canary deployments, ensuring that updates do not disrupt ongoing operations.
Reference:Zero Downtime Deployment with RTF
AWS Integration:RTF can be deployed on AWS, leveraging existing cloud infrastructure capabilities and providing a seamless integration experience.
Reference:Deploying RTF on AWS

NEW QUESTION # 48

An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

- A. Using best practices, how should the results be consumed by MuleSoft Composer?
- B. Create a second MuleSoft Composer flow that starts when the RPA process is complete.
- C. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.
- D. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.
- E. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.

Answer: B

Explanation:
When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:
Second MuleSoft Composer Flow:
Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not held up while waiting for the long-running RPA process to finish.
The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.
Trigger Mechanism:
Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.
Best Practices:
This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and

troubleshoot.
