

# Fast and Effective Preparation With C-BW4H-2505 SAP Certified Associate - Data Engineer - SAP BW/4HANA Exam Questions

BTW, DOWNLOAD part of VCETorrent C-BW4H-2505 dumps from Cloud Storage: <https://drive.google.com/open?id=1jjZj-CazJQ4wJGFSLCC-PW1rGxPqLiG9>

However, when asked whether the SAP latest dumps are reliable, costumers may be confused. For us, we strongly recommend the C-BW4H-2505 exam questions compiled by our company, here goes the reason. On one hand, our C-BW4H-2505 test material owns the best quality. When it comes to the study materials selling in the market, qualities are patchy. But our C-BW4H-2505 test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our C-BW4H-2505 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

Unlike those impotent practice materials, our C-BW4H-2505 study questions have salient advantages that you cannot ignore. They are abundant and effective enough to supply your needs of the C-BW4H-2505 exam. Since we have the same ultimate goals, which is successfully pass the C-BW4H-2505 Exam. So during your formative process of preparation, we are willing be your side all the time. As long as you have questions on the C-BW4H-2505 learning braindumps, just contact us!

>> Premium C-BW4H-2505 Exam <<

## New C-BW4H-2505 Exam Experience, Downloadable C-BW4H-2505 PDF

As is known to us, our company has promised that the C-BW4H-2505 valid study guide materials from our company will provide more than 99% pass guarantee for all people who try their best to prepare for the C-BW4H-2505 exam. If you are preparing for the C-BW4H-2505 exam by the guidance of the C-BW4H-2505 study practice question from our company and take it into consideration seriously, you will absolutely pass the C-BW4H-2505 exam and get the related certification. So do not hesitate and hurry to buy our C-BW4H-2505 study materials!

## SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q54-Q59):

### NEW QUESTION # 54

The Database Explorer in the Web IDE for SAP HANA provides a data file import wizard to create a table in SAP HANA from a flat file. What are possible actions after the system suggests the target structure? Note: There are 3 correct answers to this question.

- A. Switch the table type between row store and column store.
- B. Adjust the suggested data type of the target table fields.
- C. Remove leading zeroes for a target table field.
- D. Define sorting properties for a target table field.
- E. Change the order of the fields in the target table.

Answer: B,C,E

### NEW QUESTION # 55

You use InfoObject B as a display attribute for InfoObject A.

Which object properties prevent you from changing InfoObject B into a navigational attribute for InfoObject A? Note: There are 3 correct answers to this question.

- A. InfoObject B is defined as a Key Figure.
- B. Data Type "Character String" is set in InfoObject A.
- C. High Cardinality is set in InfoObject B.
- D. Conversion Routine "ALPHA" is set in InfoObject A.
- E. Attribute Only is set in InfoObject B.

Answer: A,C,E

Explanation:

In SAP BW/4HANA, when using InfoObjects and their attributes, certain properties of the objects can restrict or prevent specific configurations. Let's analyze each option to determine why B, C, and D are correct:

\* Explanation: If an InfoObject is flagged as "Attribute Only," it means that this object is designed exclusively to serve as an attribute for another InfoObject. Such objects cannot be used as navigational attributes because navigational attributes require additional functionality, such as being part of reporting and navigation paths.

\* In SAP BW/4HANA, the "Attribute Only" property is a restriction that prevents an InfoObject from being used in ways other than as a display attribute. This ensures that the object remains lightweight and focused on its intended purpose.

2. High Cardinality is set in InfoObject B (Option C) Explanation: High cardinality indicates that the InfoObject has a large number of unique values relative to the dataset size. Navigational attributes typically require efficient indexing and aggregation, which becomes challenging with high-cardinality fields.

Therefore, SAP BW/4HANA does not allow high-cardinality attributes to be used as navigational attributes.

Reference: High-cardinality attributes are better suited for use cases like drill-downs or detailed analysis rather than navigation. The system enforces this restriction to optimize performance and avoid excessive memory consumption.

3. InfoObject B is defined as a Key Figure (Option D) Explanation: Key Figures are numeric measures (e.

g., sales amount, quantity) and are fundamentally different from characteristics (descriptive attributes). Since navigational attributes must be characteristics, an InfoObject defined as a Key Figure cannot be converted into a navigational attribute.

Reference: In SAP BW/4HANA, Key Figures and Characteristics serve distinct roles in data modeling. Key Figures are used for calculations and aggregations, while Characteristics provide context and descriptive information.

4. Data Type "Character String" is set in InfoObject A (Option A) Explanation: The data type of InfoObject A (the primary InfoObject) does not influence whether InfoObject B can be converted into a navigational attribute. The data type of InfoObject B (the attribute) is more relevant in this context.

Reference: While the data type of InfoObject A may affect how the attribute is displayed or processed, it does not impose restrictions on converting InfoObject B into a navigational attribute.

5. Conversion Routine "ALPHA" is set in InfoObject A (Option E) Explanation: Conversion routines like

"ALPHA" are used to format or transform data during input/output operations. These routines do not impact the ability to convert an attribute into a navigational attribute.

Reference: Conversion routines are applied at the field level and do not interfere with the structural properties required for navigational attributes.

Conclusion The correct answers are B (Attribute Only is set in InfoObject B), C (High Cardinality is set in InfoObject B), and D (InfoObject B is defined as a Key Figure). These properties directly conflict with the requirements for navigational attributes in SAP BW/4HANA.

### NEW QUESTION # 56

What are some of the benefits of using an InfoSource in a data flow? Note: There are 2 correct answers to this question.

- A. Providing the delta extraction information of the source data
- B. Realizing direct access to source data without storing them
- C. Enabling a data transfer process (DTP) to process multiple sequential transformations
- D. Splitting a complex transformation into simple parts without storing intermediate data

**Answer: C,D**

Explanation:

An InfoSource in SAP BW/4HANA is a logical object used in data flows to facilitate the movement and transformation of data between source systems and target objects (e.g., DataStore Objects, InfoCubes). Let's analyze each option to determine why A and C are correct:

\* Explanation: An InfoSource allows you to break down a complex transformation into smaller, manageable steps. This modular approach simplifies the design and maintenance of data flows.

Importantly, the intermediate results are not stored permanently, which optimizes storage usage and improves performance.

\* In SAP BW/4HANA, InfoSources act as intermediate layers that streamline data processing by enabling step-by-step transformations without creating additional persistent storage layers.

2. Providing the delta extraction information of the source data (Option B) Explanation: Delta extraction is typically handled by the source system or the Data Transfer Process (DTP), not by the InfoSource itself.

The InfoSource is primarily a logical container for organizing and transforming data, not for managing delta mechanisms.

Reference: Delta handling is configured at the source system or extractor level and is managed through DTP settings. The InfoSource does not play a direct role in this process.

3. Enabling a data transfer process (DTP) to process multiple sequential transformations (Option C) Explanation: An InfoSource can be used to chain multiple transformations together, allowing a single DTP to process these transformations sequentially. This capability enhances the flexibility and efficiency of data flows by consolidating multiple steps into a single process.

Reference: In SAP BW/4HANA, InfoSources serve as intermediaries that enable seamless integration of multiple transformations within a single DTP, reducing complexity and improving performance.

4. Realizing direct access to source data without storing them (Option D) Explanation: Direct access to source data without storage is achieved through Virtual Providers or other real-time data access mechanisms, not through InfoSources. InfoSources are designed to temporarily hold transformed data during the data flow process.

Reference: Virtual Providers bypass the need for physical storage by directly accessing source data.

InfoSources, on the other hand, are part of the physical data flow architecture and involve temporary storage of transformed data.

Conclusion The correct answers are A (Splitting a complex transformation into simple parts without storing intermediate data) and C (Enabling a data transfer process (DTP) to process multiple sequential transformations). These benefits highlight the flexibility and efficiency that InfoSources bring to data modeling and transformation processes in SAP BW/4HANA.

### NEW QUESTION # 57

Which recommendations should you follow to optimize BW query performance? Note: There are 3 correct answers to this question.

- A. Create linked components.
- B. Use the include mode within filter restrictions.
- C. Use the dereference option for reusable filters.
- D. Include fewer drill-down characteristics in the initial view.
- E. Use mandatory characteristic value variables.

**Answer: B,D,E**

Explanation:

Optimizing BW query performance is critical for ensuring efficient reporting and analysis in SAP BW/4HANA. Let's analyze each option to determine why B, C, and D are correct:

\* Explanation: Including too many drill-down characteristics in the initial view of a BW query can significantly impact performance. Each additional characteristic increases the complexity of the query and the volume of data retrieved, leading to slower response times. By limiting the number of characteristics in the initial view, you reduce the amount of data processed upfront, improving query performance.

\* In SAP BW/4HANA, best practices recommend designing queries with a minimal set of characteristics in the initial view and allowing users to add drill-downs dynamically as needed.

2. Use mandatory characteristic value variables (Option C) Explanation: Mandatory characteristic value variables force users to specify filter values before executing a query. This reduces the amount of data retrieved by the query, as the system only processes

the filtered subset of data. Without mandatory variables, queries may retrieve large datasets unnecessarily, leading to poor performance.

Reference: SAP BW/4HANA provides variable types such as single-value, multiple-value, and interval variables that can be marked as mandatory. These variables help optimize query execution by narrowing down the data scope.

3. Use the include mode within filter restrictions (Option D)Explanation: The "include mode" in filter restrictions ensures that only the specified values are included in the query result. This is more efficient than using "exclude mode," which requires the system to evaluate all possible values and exclude the specified ones. Using include mode reduces the computational overhead and improves query performance.

Reference: SAP BW/4HANA recommends using include mode for filters wherever possible, as it simplifies the filtering logic and enhances performance.

4. Create linked components (Option A)Explanation: Linked components are used to create reusable query elements, such as structures or formulas, but they do not directly impact query performance. While linked components improve maintainability and consistency, they are not a performance optimization technique.

Reference: Linked components are primarily a design-time feature and do not influence runtime query execution.

5. Use the dereference option for reusable filters (Option E)Explanation: The dereference option for reusable filters allows filters to be reused across multiple queries. However, this does not inherently improve query performance. The performance impact depends on how the filters are defined and applied, not on the reuse mechanism itself.

Reference: Reusable filters are a design-time feature aimed at reducing redundancy, but they do not directly optimize query execution.

ConclusionThe correct answers areB (Include fewer drill-down characteristics in the initial view),C (Use mandatory characteristic value variables), andD (Use the include mode within filter restrictions). These recommendations directly address query performance by reducing data volume and optimizing filtering logic.

#### NEW QUESTION # 58

Which objects values can be affected by the key date in a BW query? Note: There are 3 correct answers to this question.

- A. Time characteristics
- B. Hierarchies
- C. Basic key figures
- D. Display attributes
- E. Navigation attributes

Answer: A,B,D

#### NEW QUESTION # 59

.....

Are you often regretful that you have purchased an inappropriate product? Unlike other platforms for selling test materials, in order to make you more aware of your needs, C-BW4H-2505 test preps provide sample questions for you to download for free. You can use the sample questions to learn some of the topics about C-BW4H-2505 learn torrent and familiarize yourself with the C-BW4H-2505 quiz torrent in advance. If you feel that the C-BW4H-2505 quiz torrent is satisfying to you, you can choose to purchase our complete question bank. After the payment, you will receive the email sent by the system within 5-10 minutes.
