

3V0-21.25 Sample Questions Answers & Dump 3V0-21.25 File

BONUS!!! Download part of ActualtestPDF 3V0-21.25 dumps for free: <https://drive.google.com/open?id=1U8bbCKBK7Cv1KJo8C7ua9jSf6iySU7YL>

According to the needs of all people, the experts and professors in our company designed three different versions of the 3V0-21.25 certification training materials for all customers. The three versions are very flexible for all customers to operate. According to your actual need, you can choose the version for yourself which is most suitable for you to preparing for the coming exam. All the 3V0-21.25 Training Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the 3V0-21.25 latest questions to preparing for your coming exam.

VMware 3V0-21.25 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section focuses on understanding fundamental IT architectures, technologies, and industry standards that support VMware Cloud Foundation environments. It ensures candidates understand the foundational concepts required to design and manage automated cloud infrastructure solutions. |
| Topic 2 | <ul style="list-style-type: none"> VMware Products and Solutions: This section covers VMware products related to VMware Cloud Foundation Automation, particularly components such as vSphere Supervisor and supervisor-based NSX networking. It focuses on identifying and differentiating architectural components and how they function within a deployment. |
| Topic 3 | <ul style="list-style-type: none"> Install, Configure, Administrate the VMware Solution: This section covers configuring and administering VMware Cloud Foundation Automation environments. It includes managing provider portals, organizations, integrations, governance policies, resource deployments, automation workflows, blueprints, and orchestrator components. |
| Topic 4 | <ul style="list-style-type: none"> Operation Management: This section focuses on monitoring and managing operational aspects of VMware Cloud Foundation Automation. It includes using VMware operations tools to monitor automation services, provider management, and organizational environments. |
| Topic 5 | <ul style="list-style-type: none"> Plan and Design the VMware Solution: This section focuses on designing VMware Cloud Foundation Automation environments based on business and technical requirements. It includes understanding tenancy deployment models, organization types, and the functional components used to structure and manage cloud resources. |

3V0-21.25 Sample Questions Answers & Latest Dump 3V0-21.25 File Ensure you "Pass Guaranteed"

You may previously think preparing for the 3V0-21.25 practice exam will be full of agony; actually, you can abandon the time-consuming thought from now on. Our 3V0-21.25 exam question can be obtained within 5 minutes after your purchase and full of high quality points for your references, and also remedy your previous faults and wrong thinking of knowledge needed in this exam. As a result, many customers get manifest improvement and lighten their load by using our 3V0-21.25 Latest Dumps. You won't regret your decision of choosing us. In contrast, they will inspire your potential. Besides, when conceive and design our 3V0-21.25 exam questions at the first beginning, we target the aim customers like you, a group of exam candidates preparing for the exam.

VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q18-Q23):

NEW QUESTION # 18

An administrator is designing a VCF Automation service catalog item that enables development teams from multiple business units to deploy standardized environments for microservices applications. The solution must support consistent configuration, minimize environment sprawl, and enforce automated decommissioning policies. Which three capabilities of VMware Cloud Foundation (VCF) Automation can be used to meet these requirements? (Choose three.)

- A. Provide a Virtual Machine (VM) template running Ubuntu with Docker pre-installed.
- B. Create DNS entry for cost center tracking.
- C. Create a custom cloud-init configuration to installing standard company tooling.
- D. Allow predefined firewall rules for outbound access.
- E. Define and assign a lease policy.

Answer: C,D,E

Explanation:

To meet the requirements of a standardized, governed microservices environment, VCF 9.0 Automation provides several key features. First, Lease Policies are the primary tool for minimizing "environment sprawl" and enforcing automated decommissioning. By assigning a lease, the administrator ensures that resources are automatically reclaimed after a set period unless a renewal is explicitly granted, preventing "forgotten" deployments from consuming expensive capacity. Second, cloud-init (or the similar cloudConfig stanza) allows for the standardized, post-deployment configuration of the VM OS, such as installing security agents or company-specific developer tools, ensuring every environment is consistent from "Day 0". Finally, predefined firewall rules (often delivered via NSX VPC Security Profiles) ensure that newly deployed environments adhere to the organization's security standards. This prevents developers from manually (and potentially incorrectly) configuring networking, thereby automating the "Secure-by-Design" requirement within the self-service catalog item.

NEW QUESTION # 19

A customer has a requirement to register a resource with an external service during provisioning in a VMApps Organization. The requirements are:

- * the registration cannot cause provisioning to fail.
- * the registration or failure will only be logged in the external service.

What two constructs satisfy the requirements? (Choose two.)

- A. ABX action.
- B. Cloud-init stanza in the blueprint.
- C. Blocking event broker subscription.
- D. Bash script on the template.
- E. Non-blocking event broker subscription.

Answer: A,E

Explanation:

To satisfy the requirement that a registration task must not impact the success of the overall deployment, a Non-blocking event broker subscription must be used. In VCF Automation 9.0, a "Blocking" subscription pauses the provisioning process until the extensibility task completes, allowing the workflow to fail the deployment if the task returns an error. Conversely, a "Non-blocking" subscription operates asynchronously; the platform fires the event and immediately continues with the VM lifecycle regardless of the task's outcome.

An Action-Based Extensibility (ABX) action is the ideal lightweight serverless function to execute this registration logic, as it can be easily configured to run in response to the event trigger without the overhead of a full orchestrator workflow. By combining these two, the administrator ensures that the external registration is attempted, and any successes or failures are handled purely within the context of that action and the external service, fulfilling the customer's logging and failure-tolerance requirements.

NEW QUESTION # 20

Which statement describes Virtual Private Clouds (VPCs)?

- A. Enables the provider administrator to create multiple VCF instances nested within public clouds (e.g., Amazon AWS, Microsoft Azure, Google GCP, etc.).
- **B. Enables multiple organizations to share the same physical Supervisor cluster while consuming logically isolated networks.**
- C. Enables the provider administrator to create nested VCF instances with a private cloud.
- D. Enables multiple organizations to share virtualized GPUs.

Answer: B

Explanation:

Virtual Private Clouds (VPCs) in VCF 9.0 represent a significant evolution in multi-tenant networking. A VPC is a logically isolated network partition that exists within a shared physical infrastructure, specifically a Supervisor cluster. This construct allows multiple distinct organizations to coexist on the same compute hardware while maintaining complete separation of their network traffic, IP address spaces, and security policies. Each VPC acts as a "mini-datacenter" for the tenant, providing automated services such as routing, DHCP, NAT, and distributed firewalls without the tenant ever needing to see or interact with the underlying NSX Tier-0 or Tier-1 gateway architecture. This "abstraction" is the key to scaling VCF 9.0 deployments, as it allows the provider to maximize host utilization across many small tenants while giving each tenant the "look and feel" of a dedicated, private networking environment. It effectively removes the complexity of manual VLAN or segment management that characterized older private cloud architectures.

NEW QUESTION # 21

An administrator is tasked to enable VMware Cloud Foundation (VCF) Automation to run ABX actions. What must be configured?

- **A. Create a cloud account in the Provider Management Portal.**
- B. Create a region in an AllApps Organization.
- C. Create a cloud account in the Organization Portal.
- D. Create a project in an AllApps Organization.

Answer: A

Explanation:

Action-Based Extensibility (ABX) requires a functional management plane connection to execute scripts against the infrastructure. In VCF 9.0, the foundation for all automation tasks-including ABX-is the Cloud Account. The administrator must Create a cloud account in the Provider Management Portal to establish the primary connection between the VCF Automation appliance and the underlying vCenter/NSX endpoints.

While individual organizations can have their own accounts, the core extensibility engine (which runs the serverless containers for ABX) relies on the provider-level account to identify where and how to execute scripts across the fleet. Without a valid Cloud Account, the ABX service has no target for resource discovery or event-triggered logic, rendering the extensibility framework non-functional for both provider and tenant organizations.

NEW QUESTION # 22

The product development team is rolling out several new application stacks and require a self-service option to deploy their applications quickly and consistently. The requirements are:

* Present only approved application configurations.

* No manual configuration within a blueprint.

Which VMware Cloud Foundation (VCF) Automation approach meets these requirements?

- A. Integrate VCFA with a Git repository containing blueprint YAML files and train the team to update infrastructure parameters properly before committing changes.

- B. Publish pre-approved blueprints with all required inputs preconfigured to a catalog so team members can deploy them directly.
- C. Publish pre-approved blueprints to a catalog and allow the team to choose infrastructure options such as compute cluster and storage policy during deployment.
- D. Publish all available blueprints to a catalog so team members can choose what is required and adjust configurations as needed at request time.

Answer: B

Explanation:

To achieve the goal of "quick and consistent" deployments with "no manual configuration," the administrator must leverage preconfigured catalog items. In VCF 9.0 Automation, this is achieved by creating blueprints where all variables (such as CPU, RAM, and network segments) are either hardcoded or driven by hidden logic, and then publishing these as Catalog Items with specific Custom Forms. By providing blueprints with all required inputs preconfigured, the platform eliminates the "request-time" complexity that leads to configuration errors or environment drift. This approach ensures that the development team only sees a "click- to-deploy" interface for approved application stacks. Unlike Option A or B, which introduce user-driven variability, or Option C, which requires manual Git interaction, this model provides a highly governed, "golden-image" style of infrastructure consumption that aligns perfectly with the requirement for zero manual configuration by the end-user.

NEW QUESTION # 23

.....

By analyzing the syllabus and new trend, our 3V0-21.25 practice engine is totally in line with this exam for your reference. So grapple with this chance, our 3V0-21.25 learning materials will not let you down. With our 3V0-21.25 Study Guide, not only that you can pass you exam easily and smoothly, but also you can have a wonderful study experience based on the diversified versions of our 3V0-21.25 training prep.
