

Hot JN0-336 Valid Test Discount 100% Pass | Latest JN0-336 Dumps Reviews: Security, Specialist (JNCIS-SEC)

What's more, part of that Prep4SureReview JN0-336 dumps now are free: https://drive.google.com/open?id=1jrYjfhWtHMzy7SF87_dvZ9wVsW2RR1Wj

Learning at electronic devices does go against touching the actual study. Although our JN0-336 exam dumps have been known as one of the world's leading providers of exam materials, you may be still suspicious of the content. For your convenience, we especially provide several demos for future reference and we promise not to charge you of any fee for those downloading. Therefore, we welcome you to download to try our JN0-336 Exam for a small part. Then you will know whether it is suitable for you to use our JN0-336 test questions. There are answers and questions provided to give an explicit explanation. We are sure to be at your service if you have any downloading problems.

The best way for candidates to know our JN0-336 training dumps is downloading our free demo. We provide free PDF demo for each exam. This free demo is a small part of the official complete Juniper JN0-336 training dumps. The free demo can show you the quality of our exam materials. You can download any time before purchasing. You can tell if our products and service have advantage over others. I believe our Juniper JN0-336 training dumps will be the highest value with competitive price comparing other providers.

You just finished setting up your command-and-control (C&C) category with Juniper ATP Cloud. You notice that all of the feeds have zero objects in them.

Which statement is correct in this scenario?

- A. Set the maximum C&C entries within the Juniper ATP Cloud GUI.
- **B. No action is required, the feeds take a few minutes to download.**
- C. The security intelligence policy must be configured; on a unified security policy
- D. Use the commit full command to start the download.

Answer: B

Explanation:

According to the Juniper Networks JNCIS-SEC Study Guide, when you set up your command-and-control (C&C) category with Juniper ATP Cloud, all of the feeds will initially have zero objects in them.

This is normal, as it can take a few minutes for the feeds to download. No action is required in this scenario and you will notice the feeds start to populate with objects once the download is complete.

NEW QUESTION # 83

You want to control when cluster failovers occur.

In this scenario, which two specific parameters would you configure on an SRX Series device? (Choose two.)

- A. heartbeat-threshold
- B. heartbeat-interval
- C. heartbeat-cos
- D. heartbeat-address

Answer: A,B

Explanation:

To control when cluster failovers occur, you need to configure two specific parameters on an SRX Series device: heartbeat-interval and heartbeat-threshold. These parameters determine how often the nodes in a cluster exchange heartbeat messages and how many consecutive heartbeats can be missed before a failover is triggered. The heartbeat-interval specifies the time interval in seconds between each heartbeat message. The default value is 1 second and the range is from 0.1 to 10 seconds. The heartbeat- threshold specifies the number of consecutive heartbeats that must be missed before a failover occurs.

The default value is 3 and the range is from 2 to 255.

NEW QUESTION # 84

You want to use IPS signatures to monitor traffic.

Which module in the AppSecure suite will help in this task?

- A. AppQoS
- B. APPID
- C. AppFW
- D. AppTrack

Answer: C

Explanation:

The AppFW module in the AppSecure suite provides IPS signatures that can be used to monitor traffic and detect malicious activities. AppFW also provides other security controls such as Web application firewall, URL filtering, and application-level visibility.

NEW QUESTION # 85

Which two statements about SRX Series device chassis clusters are true? (Choose two.)

- A. Chassis cluster member devices must be the same model.
- B. Each chassis cluster member device can host active redundancy groups
- C. Each chassis cluster member requires a unique cluster ID value.
- D. Redundancy group 0 is only active on the cluster backup node.

Answer: A,B

Explanation:

In a chassis cluster, both nodes can host active redundancy groups. The active redundancy groups can be distributed between the two nodes, depending on the configuration and failover status, allowing each node to handle traffic for different sets of services or interfaces.

For the chassis clustering to function correctly, both nodes in the cluster must be of the same model.

This requirement ensures that the hardware capabilities, such as processing power and interface compatibility, are identical, which is crucial for maintaining consistent performance and behavior between cluster nodes.

NEW QUESTION # 86

You are configuring logging for a security policy.

In this scenario, in which two situations would log entries be generated? (Choose two.)

- A. every 60 seconds
- B. at session initialization
- C. at session close
- D. every 10 minutes

Answer: B,C

Explanation:

Log entries would be generated in two situations: at session initialization and at session close. At session initialization, the log entry would include details about the connection, such as the source and destination IP addresses, the service being used, and the action taken by the security policy. At session close, the log entry would include details about the connection, such as the duration of the session, the bytes sent/received, and the action taken by the security policy. For more information, you can refer to the Juniper Security documentation at
