

Pass Guaranteed Quiz Pegasystems - PEGACPRSA22V1 - Certified Pega Robotics System Architect 22 First-grade Exam Passing Score

What's more, part of that DumpsReview PEGACPRSA22V1 dumps now are free: <https://drive.google.com/open?id=1DFjo3WZFj5jQ9uLYKqJcZwqD1LCPbISK>

DumpsReview is here to provide you with PEGACPRSA22V1 exam dumps. These Pegasystems PEGACPRSA22V1 practice test materials will help you secure the PEGACPRSA22V1 credential on the first attempt. DumpsReview resolves every problem of the test aspirants with reliable Pegasystems PEGACPRSA22V1 Practice Test material. This PEGACPRSA22V1 practice exam imitates the Pegasystems PEGACPRSA22V1 real exam pattern. Thus, it helps you kill Pegasystems PEGACPRSA22V1 exam anxiety.

The PEGACPRSA22V1 Exam is a challenging and comprehensive exam that requires candidates to have a solid understanding of Pega's RPA technology, as well as experience working with the platform. PEGACPRSA22V1 exam is intended for professionals who have prior experience in software development, automation, or business process management. Upon passing the exam, candidates will receive the Pega Certified Robotics System Architect (PCRSA) certification, which is a valuable credential in the field of RPA and automation.

Benefits of Taking Pegasystems PEGACPRSA22V1 Practice Exams

Our PEGACPRSA22V1 exam questions can meet your needs to the maximum extent, and our PEGACPRSA22V1 learning materials are designed to the greatest extent from the customer's point of view. So you don't have to worry about the operational complexity. As soon as you enter the learning interface of our system and start practicing our PEGACPRSA22V1 Learning Materials on our Windows software, you will find small buttons on the interface. It is very easy and convenient to use and find.

Pegasystems Certified Pega Robotics System Architect 22 Sample Questions (Q37-Q42):

NEW QUESTION # 37

During application discovery, what three things must the developer notice about the application to help design the automation? (Choose three.)

- A. How the adapter process data
- B. How the automation responds to the process

- C. How the application responds during use
- D. How the application processes data
- E. How users interact with the applications

Answer: C,D,E

Explanation:

Application discovery is an early technical validation step that involves collecting the information about applications in scope of a potential robotics use case. During discovery you need to find out application types (and if they are on applications support matrix for Pega Robotics), how they are launched, how they are used, and check accessibility and functionality of the controls through interrogation. Application discovery is necessary to ensure that robotics use case is viable and it doesn't have any technical constraints... or, if constraints exist, then what kind of workarounds will be necessary to ensure the use case is successful. The rationale for having application discovery as a best practice is that you don't want to find out half-way through coding an automation that a key control is not available or not performing the desired action.

NEW QUESTION # 38

Which two of the following Tool Windows are used in Pega Robot Studio? (Choose two.)

- A. Object Explorer
- B. Menu toolbar
- C. Designer windows
- D. Solution Explorer

Answer: B,C

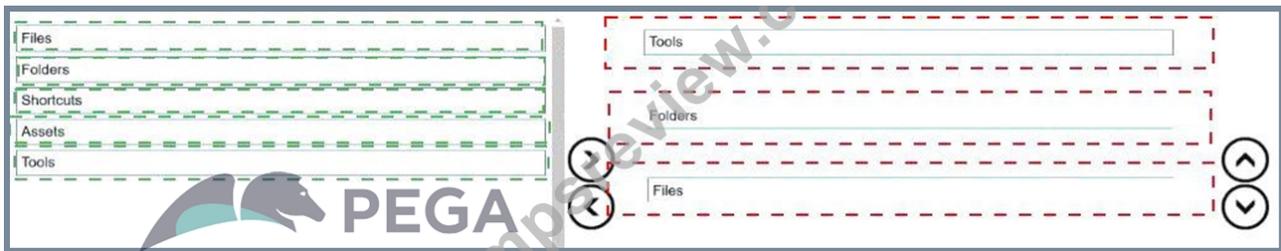

NEW QUESTION # 39

Before deploying your robotic project, you realize that the connection parameters (or Pega Robot Manager, the Pega Robot Runtime settings, and the application login credentials for Assisted Sign-On need updating to reflect the production environment. Arrange the three steps, as shown in the following figure. that you click in the correct order to access the necessary configuration files. (Choose Three).

Answer:

Explanation:

Explanation:

Tools

Folders

Files

Before deploying automations to a production environment, it's essential to update configuration files such as PegaRuntimeConfig.xml, CommonConfig.xml, and CredentialManagerConfig.xml. These files define how the robot connects to Pega Robot Manager, how the runtime behaves, and how credentials are managed for Assisted Sign-On.

In Pega Robot Studio, these files are accessed through the Debug menu path that navigates through several levels - starting from Tools, then Folders, and finally Files.

From the Pega Robotics System Design and Implementation Guide, section "Accessing and Editing Configuration Files for Deployment":

"Configuration files used by the Pega Robot Runtime environment can be accessed within Robot Studio through the Debug menu.

The access path is Debug # Tools # Folders # Files.

This navigation path opens the directory containing essential configuration files such as PegaRuntimeConfig.xml, CommonConfig.xml, and CredentialManagerConfig.xml, which can be modified to point to the correct environment (test, staging, or production)." Detailed Step Explanation:

* Step 1: Tools

* The Tools section under the Debug menu provides access to the environment utilities used for configuration and diagnostics.

* Step 2: Folders

* Under Tools, select Folders to navigate to the configuration folder where Robot Studio and Runtime files are stored.

* Step 3: Files

* Within Folders, click Files to open and view all editable XML/JSON configuration files required for environment updates (e.g., PegaRuntimeConfig.xml, CommonConfig.xml, CredentialManagerConfig.xml).

By following this sequence, developers can easily access and update environment settings before packaging the deployment.

Final Correct Sequence:

* Tools

* Folders

* Files

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Managing Configuration Files and Environment Setup for Deployment section (Pega Robotics 19.1 and later).

NEW QUESTION # 40

You have extracted a proxy for a data set and are using it to pass the data into a procedure automation input parameter. In the procedure automation, the data link from the input parameter is not connecting to the stringValue on a stringUtils method.

What two troubleshooting steps do you perform to correct the issue? (Choose two.)

- A. Confirm the data type on the procedure automation input parameter.
- B. Confirm the proxy's data type matches with the stringUtils method.
- C. Confirm the proxy data in a messageDialog.
- D. Confirm the stringUtils method works.

Answer: A,C

NEW QUESTION # 41

The StartPage property is similar to the Path property.

Which statement about the StartPage and Path properties is true?

- A. Both the StartPage and Path properties belong to Web and Text applications.
- B. The StartPage property belongs to the Windows application, while the Path property belongs to the Web application.
- C. The StartPage property belongs to the Web application, while the Path property belongs to the Windows application.

- D. The StartPage property belongs to the Windows application, while the Path property belongs to the Text application.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

In Pega Robot Studio, each application adapter includes specific properties that define how the application is launched and managed.

According to the Pega Robotics System Design and Implementation Guide, in the section "Application Adapter Properties and Configuration", the following explanation is given:

"The Path property specifies the executable file (.exe) that starts a Windows application.

The StartPage property specifies the initial URL or webpage that loads when a Web application adapter launches.

Both properties are launch parameters defining how Pega Robot Studio starts and attaches to the target application, but they apply to different adapter types." Detailed Reasoning:

* The Path property is used by Windows adapters, because it defines the file system path of the application executable (for example, C:\Program Files\AppFolder\App.exe).

* The StartPage property is used by Web adapters, because it defines the initial URL or webpage (for example, https://bankerinsight.pega.com/login.html) that the adapter opens when starting the browser instance.

Option Analysis:

* A. Incorrect - The StartPage is for web apps, not Windows.

* B. Incorrect - Both do not belong to both adapter types.

* C. Correct - StartPage is a Web adapter property; Path is a Windows adapter property.

* D. Incorrect - The StartPage is not for Windows apps, and Path is not for Text adapters.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Application Adapters and Launch Properties section (Pega Robotics 19.1 and later).

NEW QUESTION # 42

.....

Free demo for PEGACPRSA22V1 learning materials is available, you can try before buying, so that you can have a deeper understanding of what you are going to buy. We also recommend you to have a try before buying. In addition, PEGACPRSA22V1 training materials contain both questions and answers, and it's convenient for you to check answers after practicing. PEGACPRSA22V1 Exam Dumps cover most of the knowledge points for the exam, and you can have a good command of the knowledge points by using PEGACPRSA22V1 exam dumps. We have online and offline chat service, if you have any questions, you can consult us.
