Exam Syllabus: COBIT Design and Implementation ISACA Certified COBIT Design and Implementation

- Governance Implementation Lifecycle- 32%
- The Governance System Design Workflow- 32%
- Design Factors for a Governance System- 15%
- COBIT Basic Concepts- 8%
- Implementing & Optimizing I&T Governance Overview- 7%
- Impact of Design Factors - 3%
- Key Topics Decision Matrix- 3%

ISACA COBIT Design and Implementation Certification Sample Questions and Answers

We have prepared this sample question set to familiarize you with ISACA COBIT Design and Implementation (COBIT Design and Implementation) certification exam structure. We suggest you to try our Sample Questions for [COBIT 2019 Design and Implementation COBIT Design and Implementation Certification](#) to test your understanding of ISACA COBIT Design and Implementation process with real ISACA certification exam environment.

COBIT Design and Implementation ISACA COBIT Design and Implementation Sample Questions:-

01. COBIT performance management is based on CMMI 2.0 concepts. Which of the following is one of these concepts?

a) Process activities are associated to capability levels.

During the learning process on our COBIT-Design-and-Implementation study materials, you can contact us anytime if you encounter any problems. The staff of COBIT-Design-and-Implementation actual exam will be online 24 hours, hoping to solve the problem in time for you. You can contact our services via email or online, as long as you leave your message, our services will give you suggestions right away. And even you have problem when you already bought our COBIT-Design-and-Implementation learning guide, we will still help you solve it.

ISACA COBIT-Design-and-Implementation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Key Topics Decision Matrix: IT governance analysts, advisors, and consultants showcase their proficiency in employing a decision matrix as a tool. They exhibit their skill in evaluating and prioritizing key topics, making well-informed choices that ultimately enhance the implementation and ongoing improvement of robust governance systems.

Topic 2	<ul style="list-style-type: none"> Implementing & Optimizing I&T Governance Overview: Senior IT leaders, governance directors, and consultants step into the spotlight here. The exam assesses their profound expertise in establishing and refining IT governance practices across the entire enterprise landscape. Their proficiency in ensuring strategic alignment, facilitating sound decision-making, and maximizing value is vital.
Topic 3	<ul style="list-style-type: none"> Governance Implementation Lifecycle: In this section, the focus is on assessing the capabilities of IT governance professionals and senior managers in implementing and managing the complex world of enterprise technology governance. They will showcase their comprehensive understanding of the full lifecycle, encompassing planning, design, execution, monitoring, and enhancement of robust governance systems. Their expertise in aligning these systems with strategic objectives is key.
Topic 4	<ul style="list-style-type: none"> Design Factors for a Governance System: This domain targets IT strategists, enterprise architects, and governance advisors. It assesses their keen ability to identify and dissect critical design factors that hold significant influence over the development and deployment of a thriving governance system. Their expertise ensures the system is tailored to the organization's distinct requirements.
Topic 5	<ul style="list-style-type: none"> The Governance System Design Workflow: The exam zeroes in on IT architects, designers, and consultants as the primary audience. This section evaluates their prowess in crafting effective governance systems. These professionals will exhibit their talent for creating streamlined workflow processes, defining clear governance structures, and customizing governance frameworks to perfectly suit the unique needs of their organizations.

COBIT-Design-and-Implementation Examcollection Dumps Torrent & Practice COBIT-Design-and-Implementation Exam Online

The ISACA COBIT-Design-and-Implementation practice test questions prep material has actual ISACA COBIT-Design-and-Implementation exam questions for our customers so they don't face any hurdles while preparing for ISACA COBIT Design and Implementation Certificate (COBIT-Design-and-Implementation) certification exam. The study material is made by professionals while thinking about our users. We have made the product user-friendly so it will be an easy-to-use learning material. We even guarantee our users that if they couldn't pass the ISACA COBIT-Design-and-Implementation Certification Exam on the first try with their efforts, they can claim a full refund of their payment from us (terms and conditions apply).

ISACA COBIT Design and Implementation Certificate Sample Questions (Q129-Q134):

NEW QUESTION # 129

It is CRITICAL to perform a due diligence review following which type of event?

- A. External consultant assessment
- B. Merger, acquisition, or divestiture
- C. New business strategy or priority
- D. Shifts in the market or economy

Answer: B

Explanation:

It is critical to perform a due diligence review following a merger, acquisition, or divestiture. Such events involve significant changes to the organizational structure, assets, and operations, necessitating thorough review to identify risks, synergies, and compliance issues.

References in COBIT 2019 Design and Implementation:

* COBIT 2019 Framework: Governance and Management Objectives, APO12 (Managed Risk): This objective emphasizes the importance of risk management during significant organizational changes, such as mergers and acquisitions.

* COBIT 2019 Implementation Guide, Chapter 3: This chapter outlines the need for due diligence in evaluating potential risks and ensuring that governance and management practices are adapted to new organizational contexts.

A due diligence review ensures that all aspects of the merger, acquisition, or divestiture are carefully assessed, mitigating risks and

supporting a smooth transition.

NEW QUESTION # 130

Which of the following is a KEY consideration when finalizing a governance system design with competing priorities?

- A. The enterprise should defer final design decisions to executive management to minimize conflicts among business stakeholders.
- B. The enterprise should refer to the COBIT design workflow for universally applicable guidelines to resolve conflicting priorities.
- **C. The enterprise should be prepared to deviate from previously identified priorities with justified reasons.**
- D. The enterprise should ensure all steps in the proposed workflow are applied when focusing on a very specific issue or initiative.

Answer: C

Explanation:

COBIT 2019 explicitly acknowledges that design factors may produce conflicting priorities. The Design Guide dedicates a specific step to resolving inherent priority conflicts, emphasizing that governance design is not a mechanical process but a judgment-based activity.

The guide states that enterprises must be willing to reassess and adjust priorities when conflicts arise, provided there are clearly justified and documented reasons. This flexibility ensures that the final governance system remains realistic, balanced, and aligned with enterprise context.

Deferring decisions entirely to executive management bypasses structured design logic. The workflow does not provide universal answers for conflicts, and not all steps must be applied rigidly in every situation.

Therefore, the key consideration is the willingness to deviate from earlier priorities when justified, ensuring that governance design remains practical and effective.

NEW QUESTION # 131

Which of the following is a design factor workflow component for determining the initial scope of a governance system?

- A. Considering the enterprise's market position
- B. Considering the risk profile of the IT portfolio
- **C. Considering the risk profile of the enterprise**
- D. Considering the enterprise's culture

Answer: C

Explanation:

The COBIT 2019 Design Guide defines Step 2: Determine the Initial Scope of the Governance System, which explicitly includes considering the risk profile of the enterprise as a formal design factor. The enterprise risk profile identifies the types of IT-related risks that are most significant and therefore influence which governance and management objectives should be prioritized.

Enterprise culture and market position are contextual elements but are not listed as formal design factors in the initial scoping workflow. Similarly, the risk profile of the IT portfolio is a narrower operational view, whereas COBIT requires an enterprise-wide perspective to ensure governance decisions reflect overall business exposure.

By analyzing the enterprise risk profile early, governance designers can identify critical areas requiring stronger controls, assurance, or capability levels. This directly impacts the initial scope by determining which objectives fall inside or outside the governance system boundary.

Therefore, considering the enterprise risk profile is a core workflow component for determining the initial governance scope.

NEW QUESTION # 132

Using the COBIT 2019 Governance System Design Workflow allows enterprises to:

- A. Design a governance system that focuses primarily on compliance requirements.
- B. Ensure each of the stages and steps in the design process are closely adhered to.
- C. Implement a governance framework that is strictly aligned to industry standards.
- **D. Realize a governance system that is tailored to their needs.**

Answer: D

Explanation:

As outlined in the COBIT 2019 Design Guide:

"The governance system design workflow supports the development of a governance system that is tailored to the specific needs, context, and priorities of the enterprise." It is not limited to compliance or rigid frameworks.

Reference: COBIT 2019 Design Guide, Section 3

NEW QUESTION # 133

At which stage of the EGIT implementation life cycle should the enterprise determine the impact of an improvement program on IT and the business and how to maintain the improvement momentum?

- A. When initiating an EGIT program
- **B. When executing the EGIT implementation program plan**
- C. When developing the EGIT implementation program plan
- D. When defining the EGIT implementation road map

Answer: B

Explanation:

The COBIT 2019 framework outlines a structured approach to implementing Enterprise Governance of Information and Technology (EGIT). Understanding the impact of an improvement program on IT and the business, as well as maintaining the improvement momentum, is crucial during the execution stage of the EGIT implementation life cycle.

Detailed Explanation with References:

Initiating an EGIT Program (Option A):

At this initial stage, the focus is on understanding the current state, identifying stakeholders, and obtaining executive sponsorship. The primary activities involve setting objectives and scope rather than assessing impacts or maintaining momentum.

Defining the EGIT Implementation Road Map (Option B):

This stage involves planning the high-level steps and timeline for the EGIT implementation. While this includes identifying key milestones and dependencies, it is not the primary phase for determining the impact or maintaining momentum.

Developing the EGIT Implementation Program Plan (Option C):

Developing the program plan involves detailing the specific actions, resources, and responsibilities needed to implement the EGIT. It sets the foundation for execution but focuses more on preparation and organization rather than assessing impact or maintaining momentum.

Executing the EGIT Implementation Program Plan (Option D):

During execution, the organization puts the plan into action. This is the stage where the actual improvements are implemented, and their impacts on IT and the business can be observed and assessed. Maintaining the improvement momentum becomes critical as the changes start to take effect. Continuous monitoring, managing resistance, addressing issues, and ensuring that the improvements are sustained are key activities during this phase.

Conclusion: The correct answer is D. When executing the EGIT implementation program plan. At this stage, the enterprise is actively implementing the changes, and it is crucial to determine the impact on IT and the business, as well as to maintain the improvement momentum to ensure the success and sustainability of the program.
