Salesforce Certified Data Architect exam is a comprehensive exam designed specifically for professionals who want to demonstrate their expertise in designing, implementing, and maintaining complex data architectures in Salesforce. Salesforce Certified Data Architect certification is ideal for individuals who are responsible for managing large volumes of data and ensuring that it is organized, secure, and accessible to all relevant stakeholders.

Salesforce Certified Data Architect Sample Questions (Q11-Q16):

NEW QUESTION # 11

Universal Containers has implemented Salesforce for its operations. In order for customers to be created in their MDM solution, the customer record needs to have the following attributes:

1. First Name
2. Last Name
3. Email

Which option should the data architect recommend to mandate this when customers are created in Salesforce?

- A. Configure Page Layout marking attributes as required fields.
- B. Build validation in Integration with MDM to check required attributes.
- C. Mark Fields for the attributes as required under Setup.
- **D. Create validation rules to check If the required attributes are entered.**

Answer: D

NEW QUESTION # 12

Universal Containers wants to develop a dashboard in Salesforce that will allow Sales Managers to do data exploration using their mobile device (i.e., drill down into sales-related data) and have the possibility of adding ad-hoc filters while on the move. What is a recommended solution for building data exploration dashboards in Salesforce?

- A. Create a standard Salesforce Dashboard and connect it to reports with the appropriate filters.
- B. Create a Dashboard in an external reporting tool, export data to the tool, and add link to the dashboard in Salesforce.
- C. Create a Dashboard in an external reporting tool, export data to the tool, and embed the dashboard in Salesforce using the Canva toolkit.
- **D. Create a Dashboard using Analytics Cloud that will allow the user to create ad-hoc lenses and drill down.**

Answer: D

NEW QUESTION # 13

DreamHouse Realty has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project.

There will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.

What should the Architect consider in this situation?

- **A. Load all data after deferring sharing calculations.**
- B. Load all data using external IDs to link to parent records.
- C. Calculate summary values instead of Roll-Up by using workflow.
- D. Calculate summary values instead of Roll-Up by using triggers.

Answer: A

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for deferring sharing calculations". This implies that option A is the correct way to load large amounts of data into Salesforce without affecting performance and data integrity. Deferring sharing calculations allows the data to be loaded first and then the sharing rules to be

applied later². Option B is not correct because workflows are not recommended for calculating summary values, as they can cause performance issues and data skew³. Option C is not correct because triggers are also not recommended for calculating summary values, as they can cause governor limit errors and data inconsistency. Option D is not correct because external IDs are used to link records from different systems, not to improve data loading performance.

NEW QUESTION # 14

A casino is implementing salesforce and is planning to build a customer 360 view for a customer who visits its resorts. The casino currently maintained the following systems that records customer activity:

1. Point of sales system: All purchases for a customer.
2. Salesforce: All customer service activity and sales activity for a customer.
3. Mobile app: All bookings, preferences and browser activity for a customer.
4. Marketing: All email, SMS and social campaigns for a customer.

Customer service agents using salesforce would like to view the activities from all system to provide supports to customers. The information has to be current and real time.

What strategy should the data architect implement to satisfy this requirement?

- A. Use a customer data mart to view the 360 view of customer.
- B. Periodically upload summary information in salesforce to build 360 view.
- C. Migrate customer activities from all 4 systems into salesforce.
- **D. Explore external data sources in salesforce to build 360 view of customer.**

Answer: D

Explanation:

Exploring external data sources in Salesforce to build 360 view of customer is the best strategy to satisfy the requirement, as it allows real-time access to data from other systems without storing it in Salesforce³. Using a customer data mart may not provide real-time information or may require additional integration efforts. Migrating customer activities from all 4 systems into Salesforce may exceed the storage limits or cause data quality issues. Periodically uploading summary information in Salesforce may not provide current or detailed information.

NEW QUESTION # 15

Universal Containers (UC) has implemented Sales Cloud and it has been noticed that Sales reps are not entering enough data to run insightful reports and dashboards. UC executives would like to monitor and measure data quality metrics. What solution addresses this requirement?

- A. Generate reports to view the quality of sample data.
- B. Export the data to an enterprise data warehouse and use BI tools for data quality.
- **C. Use third-party AppExchange tools to monitor and measure data quality.**
- D. Use custom objects and fields to calculate data quality.

Answer: C

Explanation:

Using third-party AppExchange tools to monitor and measure data quality can address the requirement of UC executives by providing features such as data cleansing, deduplication, validation, enrichment, and scoring. These tools can help improve the accuracy, completeness, and consistency of the data entered by sales reps .
