

Using GIAC GICSP Dumps, Improve Your Exam Skills

The experts and professors of our company have designed the three different versions of the GICSP study materials, including the PDF version, the online version and the software version. Now we are going to introduce the online version for you. There are a lot of advantages about the online version of the GICSP Study Materials from our company. For instance, the online version can support any electronic equipment and it is not limited to all electronic equipment.

More about GICSP Exams Dumps: If you want to know more about our test preparations materials, you should explore the related GICSP exam Page. You may go over our GICSP brain dumps product formats and choose the one that suits you best. You can also avail of the free demo so that you will have an idea how convenient and effective our GICSP exam dumps are for GICSP Certification. Rather we offer a wide selection of braindumps for all other exams under the GICSP certification. This ensures that you will cover more topics thus increasing your chances of success. With the multiple learning modes in GICSP practice exam software, you will surely find your pace and find your way to success.

GIAC GICSP Latest Exam Experience | GICSP Reliable Test Sims

All exam questions that contained in our GIAC GICSP study engine you should know are written by our professional specialists with three versions to choose from: the PDF, the Software and the APP online. In case there are any changes happened to the GIAC GICSP Exam, the experts keep close eyes on trends of it and compile new updates constantly.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q74-Q79):

NEW QUESTION # 74

Which of the following would use round-robin process scheduling?

- A. Operator workstation in the control room
- B. Embedded device on the plant floor
- C. Temperature sensor in the field
- D. Data-diode at an enforcement boundary

Answer: A

Explanation:

Round-robin scheduling is a common time-sharing CPU scheduling algorithm used in general-purpose operating systems to allocate processor time fairly among processes.

An operator workstation (C) typically runs a general-purpose OS (like Windows), which uses round-robin or similar scheduling algorithms.

Embedded devices (A, B) often use real-time operating systems (RTOS) with priority-based or deterministic scheduling.

A data diode (D) is a hardware device and does not use process scheduling.

GICSP discusses scheduling differences in the context of embedded and general-purpose systems.

NEW QUESTION # 75

Which of the following is a facilitated tabletop exercise that is run in odd years and provides an overall public Lessons Learned report each year it is run?

- A. CTEP
- **B. GridEx**
- C. E-ISAC
- D. CRPA

Answer: B

Explanation:

GridEx (C) is a major, biennial cybersecurity exercise coordinated by the North American Electric Reliability Corporation (NERC) and other stakeholders. It typically occurs in odd years and involves multiple entities from across the grid, simulating large-scale cyber and physical attacks.

GridEx exercises culminate in a public Lessons Learned report to improve preparedness.

CRPA (A) and CTEP (D) are different programs/exercises, and E-ISAC (B) is the Electricity Information Sharing and Analysis Center, not an exercise.

GICSP recognizes GridEx as a critical event for testing incident response capabilities in ICS sectors.

NEW QUESTION # 76

An organization wants to use Active Directory to manage systems within its Business and Control system networks. Which of the following is the recommended security practice?

- A. Shared Active Directory domain with separate domain controllers for the Business and Control system networks
- B. Separate Active Directory domains for the Business and Control system networks
- C. An Active Directory domain for the Business network and a Windows workgroup with a domain controller for the Control system network
- **D. Shared Active Directory domain with fully functional domain controllers for the Business network and a Read-Only Domain Controller for the Control system network**

Answer: D

Explanation:

The recommended best practice is to use a shared Active Directory domain while deploying a Read-Only Domain Controller (RODC) within the Control system network (D). This approach:

Enables centralized management and authentication consistent with the business network Limits the risk of domain controller compromise in the Control network because RODCs do not store sensitive password information and restrict changes Balances security and operational efficiency by isolating sensitive environments while still leveraging AD's capabilities Options A and C increase complexity or risk by fully separating domains or controllers, while B reduces manageability by mixing domain and workgroup systems.

GICSP highlights RODCs as a means to secure domain services in ICS environments where full domain controllers pose a security risk.

NEW QUESTION # 77

Martin is writing a document that describes in general terms how to secure embedded operating systems. The document includes issues that are specific to embedded devices vs desktop and laptop operating systems.

However, it does not call out specific flavors and versions of embedded operating systems. Which type of document is Martin writing?

- **A. Guideline**
- B. Standard
- C. Procedure
- D. Policy

Answer: A

Explanation:

A Guideline (A) provides general recommendations and best practices without mandatory requirements or detailed instructions.

Procedures (B) are step-by-step instructions for specific tasks.

Standards (C) specify mandatory requirements, often with measurable criteria.

Policies (D) establish high-level organizational directives and rules.

Martin's document provides general, non-mandatory advice applicable broadly, fitting the definition of a guideline.

NEW QUESTION # 78

Which resource includes a standardized categorization of common software vulnerabilities?

- A. CVSS
- B. CSC
- C. CIP
- **D. CWE**

Answer: D

Explanation:

The Common Weakness Enumeration (CWE) (A) is a comprehensive list and taxonomy of common software weaknesses and vulnerabilities. It provides standardized names and definitions that help organizations identify and mitigate software security issues.

CVSS (B) is a scoring system used to rate the severity of vulnerabilities but does not categorize them.

CSC (C) refers to Critical Security Controls, a set of best practices, not a vulnerability catalog.

CIP (D) relates to Critical Infrastructure Protection standards, not vulnerability taxonomy.

GICSP includes CWE as an essential resource for understanding and classifying software vulnerabilities within ICS.

NEW QUESTION # 79

.....

Practice tests for GICSP Pdf Dumps are best for self-assessment. This helps improve errors and strengthen preparation. The practice test is among the most beneficial features offered by Dupleader to make sure that applicants are successful. It is advised to attempt the test multiple times. Every time you attempt the test, you'll be provided with a thorough result report which can help you be able to keep track of your work without any difficulty.
