Dump 312-50v13 Check & New 312-50v13 Test Review

BONUS!!! Download part of Prep4cram 312-50v13 dumps for free: https://drive.google.com/open?id=1HIu2IzLpSvLRvWyzfLmgz6nNxiHYFYWu

Our 312-50v13 prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate Certified Ethical Hacker Exam (CEHv13) exam torrent to the client and the questions and the answers we provide are based on the real exam. But you buy our 312-50v13 prep torrent you can mainly spend your time energy and time on your job, the learning or family lives and spare little time every day to learn our Certified Ethical Hacker Exam (CEHv13) exam torrent. Our answers and questions are compiled elaborately and easy to be mastered. Because our 312-50v13 Test Braindumps are highly efficient and the passing rate is very high you can pass the exam fluently and easily with little time and energy needed.

If you are really not sure which version you like best, you can also apply for multiple trial versions of our 312-50v13 exam questions. We want our customers to make sensible decisions and stick to them. 312-50v13 study engine can be developed to today, and the principle of customer first is a very important factor. 312-50v13 Training Materials really hope to stand with you, learn together and grow together.

New 312-50v13 Test Review | Latest 312-50v13 Test Dumps

As is known to us, perfect after-sales service for buyers is a very high value. Our 312-50v13 Guide Torrent not only has the high quality and efficiency but also the perfect service system after sale. Our 312-50v13 exam questions can help you save much time, if you use our products, you just need to spend 20-30 hours on learning, and you will pass your exam successfully. What most important is that you can download our study materials about 5~10 minutes after you purchase.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q106-Q111):

NEW QUESTION # 106
Robin, a professional hacker, targeted an organization's network to sniff all the traffic. During this process.
Robin plugged in a rogue switch to an unused port in the LAN with a priority lower than any other switch in the network so that he

could make it a root bridge that will later allow him to sniff all the traffic in the network.
What is the attack performed by Robin in the above scenario?

- A. ARP spoofing attack
- B. VLAN hopping attack
- C. DNS poisoning attack
- D. STP attack

Answer: D

Explanation:
STP prevents bridging loops in a redundant switched network environment. By avoiding loops, you can ensure that broadcast traffic does not become a traffic storm.
STP is a hierarchical tree-like topology with a "root" switch at the top. A switch is elected as root based on the lowest configured priority of any switch (0 through 65,535). When a switch boots up, it begins a process of identifying other switches and determining the root bridge. After a root bridge is elected, the topology is established from its perspective of the connectivity. The switches determine the path to the root bridge, and all redundant paths are blocked. STP sends configuration and topology change notifications and acknowledgments (TCN/TCA) using bridge protocol data units (BPDU).
An STP attack involves an attacker spoofing the root bridge in the topology. The attacker broadcasts out an STP configuration/topology change BPDU in an attempt to force an STP recalculation. The BPDU sent out announces that the attacker's system has a lower bridge priority. The attacker can then see a variety of frames forwarded from other switches to it. STP recalculation may also cause a denial-of-service (DoS) condition on the network by causing an interruption of 30 to 45 seconds each time the root bridge changes. An attacker using STP network topology changes to force its host to be elected as the root bridge.
NEW QUESTION # 107
A penetration tester discovers malware on a system that disguises itself as legitimate software but performs malicious actions in the background. What type of malware is this?

- A. Rootkit
- B. Trojan
- C. Spyware
- D. Worm

Answer: B

Explanation:
CEH v13 defines a Trojan as malware that appears as a legitimate, trusted software application while secretly executing malicious actions behind the scenes. Trojans rely on deception rather than replication, often masquerading as tools, utilities, updates, or installers. Once executed, they may install backdoors, steal credentials, exfiltrate data, or modify system settings. The defining characteristic emphasized in CEH is the legitimate-looking facade combined with hidden malicious intent, which matches the scenario perfectly.
Spyware (Option B) focuses on monitoring and data collection but does not necessarily disguise itself as legitimate software. Worms (Option C) self-replicate across networks, which is not described here. Rootkits (Option D) hide system compromise but do not necessarily pose as legitimate software. Therefore, the malware described is a Trojan.

NEW QUESTION # 108
Rebecca, a security professional, wants to authenticate employees who use web services for safe and secure communication. In this process, she employs a component of the Web Service Architecture, which is an extension of SOAP, and it can maintain the integrity and confidentiality of SOAP messages.
Which of the following components of the Web Service Architecture is used by Rebecca for securing the communication?

- A. WS Work Processes
- B. WSDL
- C. WS-Security
- D. WS-Policy

Answer: C

Explanation:
WS-Security (Web Services Security) is a protocol specification that provides a means for securing SOAP- based messages. It defines how to add authentication, encryption, and digital signatures to SOAP headers, helping ensure message integrity and confidentiality.
According to CEH v13 Official Courseware:
WS-Security is an extension of SOAP.
It supports features such as:
Authentication via tokens (e.g., username, X.509)
Message integrity via digital signatures
Message confidentiality via XML encryption
Incorrect Options:
A). WSDL (Web Services Description Language) describes the web service interface but does not provide security.
B). WS Work Processes is not a defined web service security standard.
C). WS-Policy allows expressing security requirements, but enforcement is handled by WS-Security.

NEW QUESTION # 109
What kind of detection technique is used in antivirus software that collects data from multiple protected systems and performs analysis in a cloud-based environment?

- A. Behavior based
- B. Honeypot based
- C. VCloud based
- D. Heuristics based

Answer: C

Explanation:
Comprehensive and Detailed Explanation:
VCloud-based (also known as Cloud-based or Cloud-assisted) antivirus leverages cloud computing to:
Offload detection and analysis to powerful remote servers
Provide real-time updates and threat intelligence
Aggregate data from multiple endpoints to improve detection
This method is efficient, especially for zero-day threats and large-scale protection.
From CEH v13 Courseware:
Module 6: Malware Threats # Modern Antivirus Technologies

======

NEW QUESTION # 110
As a newly appointed network security analyst, you are tasked with ensuring that the organization's network can detect and prevent evasion techniques used by attackers. One commonly used evasion technique is packet fragmentation, which is designed to bypass intrusion detection systems (IDS). Which IDS configuration should be implemented to effectively counter this technique?

- A. Adjusting the IDS to recognize regular intervals at which fragmented packets are sent.
- B. Configuring the IDS to reject all fragmented packets to eliminate the risk.
- C. Implementing an anomaly-based IDS that can detect irregular traffic patterns caused by packet fragmentation.
- D. Employing a signature-based IDS that recognizes the specific signature of fragmented packets.

Answer: C

Explanation:
According to the Certified Ethical Hacker (CEH) IDS/IPS and Evasion Techniques module, packet fragmentation is a technique attackers use to split malicious payloads into smaller fragments so that signature-based IDS sensors may fail to reassemble and inspect the complete packet.
CEH explains that anomaly-based IDS systems are more effective against fragmentation evasion because they analyze behavioral deviations rather than relying solely on known signatures. Fragmented traffic often deviates from baseline network behavior in terms of packet size, sequencing, and reassembly anomalies.
Option A is correct because anomaly-based detection can identify abnormal fragmentation behavior even if the payload itself does not match known signatures.
Option B is unreliable, as attackers do not use consistent intervals.
Option C is impractical, since legitimate traffic may be fragmented.
Option D is less effective because signature-based IDS systems can be bypassed by fragmentation techniques.
CEH recommends packet normalization and anomaly-based detection as effective countermeasures.

NEW QUESTION # 111
......

Learning is sometimes extremely dull and monotonous, so few people have enough interest in learning, so teachers and educators have tried many ways to solve the problem. Research has found that stimulating interest in learning may be the best solution. Therefore, the 312-50v13 Study Materials' focus is to reform the rigid and useless memory mode by changing the way in which the 312-50v13 exams are prepared. 312-50v13 study materials combine knowledge with the latest technology to greatly stimulate your learning power.
