## Fire-Inspector-II최신 업데이트 공부자료 완벽한 시험 최신버전 자료

International Code Council Fire-Inspector-II인증 시험을 패스하려면 시험대비자료선택은 필수입니다. 우리KoreaDumps에서는 빠른 시일 내에International Code Council Fire-Inspector-II관련 자료를 제공할 수 있습니다. KoreaDumps의 전문가들은 모두 경험도 많고, 그들이 연구자료는 실제시험의 문제와 답과 거의 일치합니다. KoreaDumps는 인증시험에 참가하는 분들한테 편리를 제공하는 사이트이며, 여러분들이 시험패스에 도움을 줄 수 있는 사이트입니다.

## 최신 Fire Inspector Fire-Inspector-II 무료샘플문제 (Q44-Q49):

질문 # 44

The fire code official has the right to enter a building to perform inspections in all of the following situations except:

- A. interior space of a warehouse with an administrative warrant.
- B. vacant buildings at any time.
- C. public spaces of a mall during normal business hours.
- D. factory floors with permission to enter.

정답: B

설명:

A fire code official has authority to enter buildings for fire safety inspections, but they must comply with legal entry requirements. The Fourth Amendment of the U.S. Constitution and fire codes restrict entry without permission, an administrative warrant, or legal authority.

Fire code officials do NOT have the right to enter vacant buildings at any time without proper authorization.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 104.3 (Right of Entry)

IFC 104.3 states that a fire code official may only enter a building at reasonable times to conduct inspections, with consent or a legal warrant.

If entry is refused, the fire code official must obtain an administrative warrant before proceeding.

2. Fourth Amendment of the U.S. Constitution

Protects property owners from unlawful searches and seizures without proper legal authority.

Detailed Explanation of Answer Choices:

Option A (Correct): Fire code officials cannot enter vacant buildings at any time without permission or a warrant.

Option B (Incorrect): Fire code officials can enter a factory floor with permission from the owner/occupant.

Option C (Incorrect): Fire code officials can inspect public areas of malls during business hours since these spaces are open to the public.

Option D (Incorrect): Fire code officials can enter a warehouse's interior with an administrative warrant, which is legally authorized for inspections.

Thus, the correct and verified answer is: A. Vacant buildings at any time.

#### 질문 # 45

Flammable medical gas supply cylinders located inside of a building must be stored in a separate room of not less than \_\_\_ fire-resistive construction when exceeding 200 cu. ft.

- A. 1/2-hour
- **B. 2-hour**
- C. 3-hour
- D. 1-hour

정답: B

설명:

The storage of flammable medical gas supply cylinders inside a building is regulated by 2021 International Fire Code (IFC) Section 5306 - Medical Gas Systems.

IFC Section 5306.2.1 - Storage of More Than 200 Cubic Feet of Medical Gases:

When the quantity of flammable medical gas exceeds 200 cubic feet, it must be stored in a separate room with a minimum 2-hour fire-resistance rating.

The room must also comply with ventilation and explosion control requirements per NFPA 99 (Healthcare Facilities Code).

Why Other Options Are Incorrect?

A: 1/2-hour - Insufficient fire resistance for high-risk gas storage.

B: 1-hour - Does not meet the minimum 2-hour requirement set by the IFC.

D: 3-hour - Exceeds the minimum required by code; the correct requirement is 2-hour fire-resistive construction.

#### 질문 # 46

What is the occupant load of a 50,000 gross square foot airport terminal concourse?

- **A. 2,500**
- B. 0
- C. 1,000
- D. 1

정답: A

설명:

To determine the occupant load of a 50,000 gross square foot airport terminal concourse, we use the occupant load factor from 2021 IBC Table 1004.5.

Step 1: Identify the Occupant Load Factor for an Airport Concourse

According to IBC Table 1004.5, the occupant load factor for an airport terminal concourse is 20 sq. ft. per person (gross).

Step 2: Calculate the Occupant Load

$50,000 \div 20 = 2,500$  occupants

Reference to Fire Inspector Documentation:  
1. 2021 International Building Code (IBC) - Table 1004.5 (Occupant Load Factor for Airport Concourses)

20 sq. ft. per person is assigned for airport concourses.

2. 2021 International Fire Code (IFC) - Section 1004.1.2 (Occupant Load Determination) Gross area calculations must follow the correct occupant load factor per IBC Table 1004.5.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 200 is too low based on proper calculations.

Option B (Incorrect): 500 is also too low.

Option C (Incorrect): 1,000 is below the required calculation.

Option D (Correct): 2,500 is the correct calculation based on IBC Table 1004.5.

Thus, the correct and verified answer is: D. 2,500.

#### 질문 # 47

What is the maximum travel distance to an exit from within a tent?

- A. 75 ft.
- B. Any distance approved by the chief
- C. 150 ft.
- D. 100 ft.

정답: C

설명:

The maximum travel distance to an exit from within a tent is regulated under the 2021 International Fire Code (IFC), Section 3103.12.2 - Means of Egress (Tents and Membrane Structures).

IFC Section 3103.12.2 - Travel Distance:

"The maximum travel distance to an exit shall not exceed 150 feet (45,720 mm)." Why Other Options Are Incorrect?

A: 75 ft. - This limit does not apply to tents; the correct limit is 150 ft.

B: 100 ft. - Too restrictive; the IFC allows up to 150 ft.

D: Any distance approved by the chief. - The fire code does not allow unlimited travel distances; 150 feet is the maximum permitted by code.

#### 질문 # 48

Given: In automobile refinishing spray booths where drying by heat is done in the spray booth, the spray booth shall be equipped with interlocks between the spraying and drying apparatus and the ventilating system.

These interlocks shall be arranged to purge the spray vapors from the spray booth for a minimum period of \_\_\_ minutes before the drying apparatus can be operated.

- A. 0
- B. 1
- C. 2
- D. 3

정답: B

설명:

In automobile refinishing spray booths where drying by heat occurs inside the same spray booth, fire codes require interlocks to prevent ignition hazards.

Before activating the drying apparatus, the ventilation system must purge the booth of spray vapors for at least 5 minutes to remove flammable concentrations.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 2404.7.3 (Drying Operations in Spray Booths) IFC 2404.7.3 mandates that spray booths must have interlocks to purge vapors for a minimum of 5 minutes before activating the drying process.

This ensures that flammable vapors are removed before heat sources operate, reducing fire risks.

2. NFPA 33 - Standard for Spray Application Using Flammable or Combustible Materials (2021 Edition) - Section 15.4.6 NFPA 33, Section 15.4.6 confirms the requirement for a 5-minute ventilation purge cycle before heat drying.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 2 minutes is insufficient for adequate vapor removal.

Option B (Incorrect): 3 minutes does not meet the minimum safety requirement.

Option C (Incorrect): 4 minutes is slightly below the code-mandated requirement.

Option D (Correct): 5 minutes is the minimum required purge time per IFC 2404.7.3 and NFPA 33.

Thus, the correct and verified answer is: D. 5.
