

# Latest Braindumps NetSec-Analyst Book & Guaranteed NetSec-Analyst Passing

2026 Latest Dumps Valid NetSec-Analyst PDF Dumps and NetSec-Analyst Exam Engine Free Share:  
[https://drive.google.com/open?id=1K\\_nP\\_dQtrf62Qz64\\_OXEYBEU2EErk8Tc](https://drive.google.com/open?id=1K_nP_dQtrf62Qz64_OXEYBEU2EErk8Tc)

From the time our company was just established until now, we have conducted multiple surveys of users. We also take every feedback from users very seriously. This is a very tedious job, but to better develop our NetSec-Analyst learning materials, our professional experts have been insisting on it! We hope to be responsible for every user of our NetSec-Analyst Exam Braindumps. Your praise is the driving force of our NetSec-Analyst practice questions!

With the dumps, you can quickly review the topics and revise them before taking the actual exam. The Palo Alto Networks NetSec-Analyst Dumps also provide detailed explanations and solutions to every question so that you can understand the concept better. This will ensure that you are well-prepared to take the exam. With our premium quality resources and unbeatable prices, you are guaranteed to pass your Palo Alto Networks Network Security Analyst certification exams.

## Guaranteed NetSec-Analyst Passing & Reliable NetSec-Analyst Braindumps Questions

We provide free update to the client and the discounts to the old client. We provide free update of our NetSec-Analyst exam materials within one year and after one year the client can enjoy the 50% discounts. The old clients enjoy some certain discounts when they buy our NetSec-Analyst exam torrent. Our experts check whether there is the update of the test bank every day and if there is the system will send to the client automatically. We choose the most typical questions and answers which seize the focus and important information and the questions and answers are based on the real exam. So you can master the most important NetSec-Analyst Exam Torrent in the shortest time and finally pass the exam successfully.

## Palo Alto Networks NetSec-Analyst Exam Syllabus Topics:

| Topic | Details |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of Technical Support Analysts and covers the identification and resolution of configuration and operational issues. It includes troubleshooting misconfigurations, runtime errors, commit and push issues, device health concerns, and resource usage problems. This domain ensures candidates can analyze failures across management systems and on-device functions, enabling them to maintain a stable and reliable security infrastructure.</li> </ul>                                                                                                                                                                                                   |
| Topic 2 | <ul style="list-style-type: none"> <li>• <b>Policy Creation and Application:</b> This section of the exam measures the abilities of Firewall Administrators and focuses on creating and applying different types of policies essential to secure and manage traffic. The domain includes security policies incorporating App-ID, User-ID, and Content-ID, as well as NAT, decryption, application override, and policy-based forwarding policies. It also covers SD-WAN routing and SLA policies that influence how traffic flows across distributed environments. The section ensures professionals can design and implement policy structures that support secure, efficient network operations.</li> </ul>                                                              |
| Topic 3 | <ul style="list-style-type: none"> <li>• <b>Object Configuration Creation and Application:</b> This section of the exam measures the skills of Network Security Analysts and covers the creation, configuration, and application of objects used across security environments. It focuses on building and applying various security profiles, decryption profiles, custom objects, external dynamic lists, and log forwarding profiles. Candidates are expected to understand how data security, IoT security, DoS protection, and SD-WAN profiles integrate into firewall operations. The objective of this domain is to ensure analysts can configure the foundational elements required to protect and optimize network security using Strata Cloud Manager.</li> </ul> |
| Topic 4 | <ul style="list-style-type: none"> <li>• <b>Management and Operations:</b> This section of the exam measures the skills of Security Operations Professionals and covers the use of centralized management tools to maintain and monitor firewall environments. It focuses on Strata Cloud Manager, folders, snippets, automations, variables, and logging services. Candidates are also tested on using Command Center, Activity Insights, Policy Optimizer, Log Viewer, and incident-handling tools to analyze security data and improve the organization overall security posture. The goal is to validate competence in managing day-to-day firewall operations and responding to alerts effectively.</li> </ul>                                                        |

## Palo Alto Networks Network Security Analyst Sample Questions (Q11-Q16):

### NEW QUESTION # 11

An organization is migrating its internal applications to a new server farm, requiring SSL Inbound Inspection for all incoming connections to these applications. The applications use self-signed certificates. To ensure successful decryption and inspection, what is the most critical configuration step for the Palo Alto Networks firewall's decryption profile, and why?

- **A. Import the self-signed certificates of the internal applications into the firewall's trusted certificate store and configure the SSL Inbound Inspection profile to use these certificates for trust validation.**
- B. Configure the Decryption Profile with 'No Decryption' for the zone where internal applications reside, relying on the applications themselves for security.
- C. Enable 'Block Session on Unsupported Version' in the Decryption Profile to prevent connections using older TLS protocols, ensuring stronger security.
- D. The firewall automatically trusts self-signed certificates during inbound inspection if the application's private key is available.
- E. Enable 'Block Session on Decryption Failure' to catch any issues, and use a generic 'Any' certificate in the Decryption Profile for inbound inspection.

**Answer: A**

Explanation:

For SSL Inbound Inspection, the firewall acts as the client and needs to trust the server's certificate. When applications use self-signed certificates, the firewall will not inherently trust them. To enable successful decryption, these self-signed certificates (or the Certificate Authority that signed them, if applicable) must be imported into the firewall's trusted certificate store. This allows the firewall to validate the server's certificate during the SSL handshake before decryption can proceed. Without this, the decryption attempt will fail due to untrusted certificate status.

### NEW QUESTION # 12

Which service protects cloud-based applications such as Dropbox and Salesforce by administering permissions and scanning files

for sensitive information?

- A. Parisma SaaS
- B. AutoFocus
- C. GlobalProtect
- D. Aperture

**Answer: A**

### NEW QUESTION # 13

Which User-ID agent would be appropriate in a network with multiple WAN links, limited network bandwidth, and limited firewall management plane resources?

- A. PAN-OS integrated agent deployed on the internal network
- B. Citrix terminal server deployed on the internal network
- C. Windows-based agent deployed on the internal network
- D. Windows-based agent deployed on each of the WAN Links

**Answer: C**

Explanation:

Another reason to choose the Windows agent over the integrated PAN-OS agent is to save processing cycles on the firewall's management plane.

### NEW QUESTION # 14

When is an event displayed under threat logs?

- A. When traffic matches a corresponding Security Profile
- B. Every time a session is blocked
- C. When traffic matches any Security policy
- D. Every time the firewall drops a connection

**Answer: A**

Explanation:

<https://docs.paloaltonetworks.com/pan-os/9-1/pan-os-admin/monitoring/view-and-manage-logs/log-types-and-severity-levels/threat-logs#:~:text=Threat%20logs%20display%20entries%20when,security%20rule%20on%20the%20firewall.>

### NEW QUESTION # 15

Review the Screenshot:

Given the network diagram, traffic must be permitted for SSH and MYSQL from the DMZ to the SERVER zones, crossing two firewalls. In addition, traffic should be permitted from the SERVER zone to the DMZ on SSH only.

Which rule group enables the required traffic?

- A.
- B.
- C.
- D.

**Answer: A**

Explanation:

Option B enables the required traffic by allowing SSL and web-browsing from UNTRUST to DMZ, denying SSH from UNTRUST to DMZ, allowing MYSQL from DMZ to SERVER, and allowing SSH from SERVER to DMZ. Option A allows SSH from UNTRUST to DMZ, which is not required. Option C denies all the required traffic. Option D denies all traffic from UNTRUST to TRUST, which is irrelevant to the question
