SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition, Sourcing and Procurement Sample Questions (Q14-Q19):

NEW QUESTION # 14

When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is "Finished"
- B. When the project status is "In Progress"
- C. When the project status is "Completed"
- D. When the project status is "Not Started"

Answer: A

Explanation:

In the SAP S/4HANA Migration Cockpit, the data retention period is specified when the project status is marked as "Finished." This ensures that all migration data is retained for a defined period after the migration project is completed, allowing for audits or troubleshooting if needed. Below is an explanation:

- * When the project status is "Finished" (B): Once the migration project is completed and marked as "Finished," the system prompts you to define the data retention period. This step ensures compliance with data governance policies and allows for potential re-use of migration objects in future projects.
- * When the project status is "Completed" (A): The "Completed" status typically indicates that the migration process has been executed but does not trigger the data retention configuration.
- * When the project status is "In Progress" (C): During the "In Progress" phase, the focus is on uploading, validating, and migrating data, not on defining retention periods.
- * When the project status is "Not Started" (D): At this stage, the migration project has not yet begun, so retention settings are irrelevant.

NEW QUESTION # 15

Which of the following is a mandatory field to create a purchase order for consumables?

- A. Account Assignment Category
- B. Item Category
- C. Material Number
- D. Purchase Info Record

Answer: A

Explanation:

When creating a purchase order for consumables in SAP S/4HANA Cloud Public Edition, the Account Assignment Category is a mandatory field. Below is an explanation of the correct answer:

- * Account Assignment Category (B): Consumable materials (e.g., office supplies, maintenance materials) are not inventory-managed and require an account assignment to determine how costs will be allocated (e.g., cost center, project, or asset). The account assignment category ensures proper financial accounting for these items.
- * Material Number (A): For consumables, the material number is optional because consumable materials may not always have a material master record. Instead, they can be procured using a short description.
- * Item Category (C): The item category is automatically determined based on the account assignment category and procurement type, so it is not manually entered.
- * Purchase Info Record (D): A purchase info record is not mandatory for consumables, as pricing and conditions can be entered directly in the purchase order.

NEW QUESTION # 16

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create cross-product workflow procedures
- B. To create business processes with a high number of people involved in a pre-defined sequence
- C. To create very simple release or approval procedures
- D. To create complex, repeated work processes with iterative cycles
- E. To create standard procedures from SAP Signavio Process Navigator

Answer: B,C,D**NEW QUESTION # 17**

Which of the following are captured in a completed Digital Discovery Assessment? Note: There are 2 correct answers to this question.

- A. Business role requirements
- B. SAP Fiori application extensions
- C. Target customer go-live date
- D. Known integration requirements

Answer: A,D**NEW QUESTION # 18**

What must you create when you build an integration scenario using the SAP Fiori Communication Management apps in SAP S/4HANA Cloud Public Edition? Note: There are 2 correct answers to this question.

- A. Communication arrangement
- B. Communication API
- C. Communication interface
- D. Communication system

Answer: A,D

Explanation:

When building an integration scenario using the SAP Fiori Communication Management apps in SAP S/4HANA Cloud Public Edition, two key components must be created:

- * Communication arrangement (Option A): A communication arrangement links the communication system to a specific communication scenario, enabling the exchange of data between systems. It defines how the integration will function and which users or systems are authorized. The SAP Communication Management Guide confirms this requirement.
- * Communication system (Option D): A communication system represents the external system or application that will interact with

SAP S/4HANA Cloud. It contains technical details such as host names, ports, and authentication methods. The same SAP Communication Management Guide documents this step.

- * B. Communication interface: Communication interfaces are predefined by SAP and are not created by users. They define the structure of the data being exchanged.
- * C. Communication API: APIs are provided by SAP and do not need to be created manually. Instead, they are selected during the communication arrangement setup.
- * SAP Communication Management Guide: Explains the steps to create communication arrangements and systems for integration scenarios. <https://help.sap.com>
- * SAP S/4HANA Cloud Integration Guide: Provides details on using communication management apps for integration
- * Why the Other Options Are Incorrect: Key References:
