Development-Lifecycle-and-Deployment-Architect최신 업데이트 시험대비자료 인기덤프자료

여러분은 우리. Itexamdump의Salesforce Development-Lifecycle-and-Deployment-Architect시험자료 즉 덤프의 문제와 답만 있으시면Salesforce Development-Lifecycle-and-Deployment-Architect인증시험을 아주 간단하게 패스하실 수 있습니다.그리고 관련 업계에서 여러분의 지위상승은 자연적 이로 이루어집니다. Itexamdump의 덤프를 장바구니에 넣으세요. 그리고 Itexamdump에서는 무료로 24시간 온라인상담이 있습니다.

최신 Salesforce Developer Development-Lifecycle-and-Deployment-Architect 무료샘플문제 (Q15-Q20):

질문 # 15
Universal Containers CUC) has decided to improve the quality of work by the development teams. As part of the effort, UC has acquired some code review software licenses to help the developers with code quality.
Which are two recommended practices to follow when conducting secure code reviews? Choose 2 answers

- A. Focus on the aggregated reviews to save time and effort, to remove the need to continuously monitor each meaningful change.
- B. Generate a code review checklist to ensure consistency between reviews and different reviewers.
- C. Use the code review software as the tool to flag which developer has committed the errors, so the developer can improve.
- D. Conduct a review that combines human efforts and automatic checks by the tool to detect all flaws.

정답：**B,C**

질문 # 16

Universal Containers (UC) is implementing a governance framework and has asked the Architect to make recommendations regarding release planning. Which two decisions should the Architect make when planning for releases? Choose 2 answers

- A. How to test existing functionality to ensure no regressions are introduced.
- B. Whether Salesforce will wait to upgrade the pod until after a UC release is complete.
- C. When to test a new UC feature release if there are issues.
- D. How to roll back to the previous Salesforce release if there are issues.

정답：**A,C**

설명：

How to test existing functionality to ensure no regressions are introduced is a decision that the Architect should make when planning for releases, as it is part of the quality assurance process and helps to ensure that the new changes do not break the existing functionality. When to test a new UC feature release is also a decision that the Architect should make when planning for releases, as it is part of the release schedule and helps to coordinate the testing activities with the development and deployment activities. Whether Salesforce will wait to upgrade the pod until after a UC release is complete is not a decision that the Architect can make, as it is determined by Salesforce and depends on the release window and the pod assignment. How to roll back to the previous Salesforce release if there are issues is not a decision that the Architect can make, as it is not possible to roll back to a previous Salesforce release once the upgrade is done.

질문 # 17

Universal Containers (UC) works with different partners and has few admin resources that take care of the day-to-day deployment tasks. As a result, UC would like to find a way to automate the deployments using Metadata API. Which two limitations of Metadata API should be considered when using Metadata API-based Deployments? Choose 2 answers

- A. Deploy and retrieve up to 10,000 files at once.
- B. Maximum Size of deployed .zip file is 39MB.
- C. Maximum size of deployed .zip file is 400MB.
- D. Deploy up to 10,000 files, but retrieve more than 10,000 files.

정답：**B,D**

설명：
Explanation
The maximum size of deployed .zip file is 39MB for Metadata API. You can deploy up to 10,000 files, but retrieve more than 10,000 files using Metadata API.

질문 # 18

Universal Containers has seven orgs in different regions. Its processes are global and standardized but each region needs the flexibility to be able to understand the global code and customize some aspects for its regions.
Which development model is optimized for this need?

- A. Create a centralized Git with all the code and where the global team approves the changes made by the local teams.
- B. Use unlocked packages to deploy the global code and allow each country to create its customized unlocked package extensions,
- C. Use a managed package for global code and another managed package for ail regions code.
- D. Use a managed package to deploy the global code and allow local teams to request the addition of code within that package.

정답：**B**

설명：
The development model that is optimized for this need is to use unlocked packages to deploy the global code and allow each country to create its customized unlocked package extensions. This model can help maintain the global standardization and consistency of the code, while also providing the flexibility and autonomy for each region to customize some aspects of the code for

their specific needs. Unlocked packages are a type of second-generation packaging that can be created and installed using the Salesforce CLI or APIs, and can be upgraded or uninstalled as needed. Unlocked package extensions are a type of unlocked packages that can depend on and extend another unlocked package or a managed package. See Unlocked Packages for more details.

질문 # 19

Product owners at Universal Containers want to ensure that all the requirements have test cases associated with them so that no functionality is left untested during user acceptance testing.

What project artifact can help meet the needs of the business?

- A. User acceptance test scripts
- B. Requirement traceability matrix
- C. Test execution plan
- D. Testing strategy

정답：B

설명：

Explanation

A requirement traceability matrix is a project artifact that maps each requirement to its corresponding test cases, ensuring that all requirements are covered by testing. User acceptance test scripts are the actual steps to execute the test cases, not the artifact that links them to the requirements. Testing strategy and test execution plan are high-level documents that describe the overall approach and schedule for testing, not the specific mapping of requirements and test cases.
