

# Avail Perfect C\_BCBTP\_2502 Reliable Dumps Book to Pass C\_BCBTP\_2502 on the First Attempt

Are you feeling anxious about taking the SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C\_BCBTP\_2502) exam? Our customizable practice test questions will help you overcome your anxiety and prepare for the actual exam. With each attempt, you will receive a score report that will help you identify and correct your mistakes before your final attempt. Our web-based practice exam creates a similar situation to the C\_BCBTP\_2502 Real Exam Questions, making it easier for you to pass. Purchase our SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C\_BCBTP\_2502) practice test material today and say goodbye to exam anxiety!

## SAP C\_BCBTP\_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Illustrating CIO Transformation Delivered by SAP Business Suite:</b> This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Discovering SAP Business Technology Platform:</b> This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.</li> </ul>

## C\_BCBTP\_2502 Test Answers & Valid C\_BCBTP\_2502 Test Dumps

C\_BCBTP\_2502 practice test can be your optimum selection and useful tool to deal with the urgent challenge. With over a decade's striving, our C\_BCBTP\_2502 training materials have become the most widely-lauded and much-anticipated products in industry. We will look to build up R&D capacity by modernizing innovation mechanisms and fostering a strong pool of professionals. Therefore, rest assured of full technical support from our professional elites in planning and designing C\_BCBTP\_2502 Practice Test.

## SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which of the following are key products of SAP Business Technology Platform (SAP BTP)? (Choose two).

- A. SAP Ariba
- B. SAP SuccessFactors
- C. SAP HANA Cloud
- D. SAP Integration Suite

**Answer: C,D**

Explanation:

SAP Business Technology Platform (SAP BTP) is organized into four primary functional pillars: Database and Data Management, Analytics, Application Development and Integration, and Intelligent Technologies.

SAP HANA Cloud serves as the foundation of the Database and Data Management pillar, providing a single, integrated powerhouse for all enterprise data. It offers the speed of in-memory processing combined with the scalability of the cloud, allowing businesses to manage large volumes of data while providing a "single source of truth." On the other hand, SAP Integration Suite is the cornerstone of the Integration pillar. It is an integration platform-as-a-service (iPaaS) that allows organizations to seamlessly connect SAP and non-SAP applications, whether they reside on-premise or in the cloud. It provides pre-built content and connectors that significantly reduce the complexity of landscape orchestration. In contrast, SAP Ariba and SAP SuccessFactors are specialized Software-as-a-Service (SaaS) applications. While they are part of the broader SAP ecosystem and often run on or integrate via BTP, they are considered line-of-business (LoB) solutions rather than core components of the technology platform itself. Understanding this distinction is vital for positioning BTP as the underlying "glue" that enables the "Intelligent Enterprise" strategy by providing the technical tools necessary to extend and integrate these LoB applications.

#### NEW QUESTION # 34

Which SAP BTP service enables businesses to orchestrate and monitor enterprise-wide workflows?

- A. SAP Business Network
- B. SAP Ariba
- C. SAP Conversational AI
- D. SAP Workflow Management

**Answer: D**

Explanation:

In the context of the Intelligent Enterprise, business processes often span multiple departments and different software systems. SAP Workflow Management (now largely integrated into the SAP Build Process Automation suite) is the specific BTP service designed to bridge these gaps. It allows organizations to digitize, manage, and operate business processes with high levels of transparency. The service provides a centralized platform to define process flows, set approval limits, and ensure that tasks are routed to the correct stakeholders in a timely manner.

The importance of this service lies in its ability to provide "live process visibility." Unlike traditional siloed workflows, SAP Workflow Management on BTP can pull data from various SAP Business Suite components-like Finance, Procurement, or HR-to create an end-to-end view of a business operation. This orchestration is critical for identifying bottlenecks and improving operational efficiency. While SAP Business Network and SAP Ariba facilitate external collaboration and procurement respectively, they do not provide the underlying technical framework for custom workflow orchestration across the entire enterprise landscape.

By utilizing BTP's workflow capabilities, companies can achieve a higher level of automation and governance, ensuring that business rules are consistently applied across all digital touchpoints, whether the underlying systems are cloud-based or on-premise.

#### NEW QUESTION # 35

What is the primary function of SAP Business Process Intelligence?

- A. To analyze and optimize business processes using AI-driven insights.
- B. To manage API security and integrations.
- C. To store customer transactional data.
- D. To replace existing workflow automation tools.

**Answer: A**

Explanation:

Before an organization can automate or improve its operations, it must first understand how its processes are actually running. The

primary function of SAP Business Process Intelligence (largely centered around the SAP Signavio suite) is to analyze and optimize business processes using AI-driven insights. It provides

"Process Mining" capabilities that scan the data logs of the SAP Business Suite to reveal the "real" path a business process takes, often uncovering hidden bottlenecks, manual workarounds, and deviations from the standard procedure.

By positioning Business Process Intelligence as a starting point for digital transformation, SAP BTP allows organizations to make data-backed decisions about where to automate. For example, the tool might discover that a specific regional office takes twice as long to process purchase orders compared to the global average.

Using AI, it can identify the root cause—such as a lack of automation or incorrect master data—and recommend specific BTP services (like SAP Build) to fix the issue. This creates a cycle of continuous improvement, where processes are constantly monitored, analyzed, and optimized, ensuring that the SAP Business Suite operates at peak efficiency and remains aligned with the company's strategic goals.

### NEW QUESTION # 36

How does SAP LeanIX support IT landscape management when integrated with SAP BTP?

- A. By providing enterprise architecture visualization and analysis.
- B. By preventing real-time integration with business processes.
- C. By enforcing manual IT infrastructure tracking.
- D. By restricting governance of IT landscapes.

**Answer: A**

Explanation:

As organizations adopt SAP BTP to build and extend their applications, their IT landscapes can become increasingly complex. SAP LeanIX (now a core part of SAP's enterprise architecture strategy) supports management by providing comprehensive visualization and analysis of the enterprise architecture. When integrated with SAP BTP, LeanIX allows IT leaders to see exactly how different BTP services, cloud applications, and on-premise systems are interconnected. This "map" of the IT landscape is essential for identifying redundant applications, managing technical debt, and ensuring that the IT strategy aligns with business goals.

The positioning of LeanIX alongside BTP is crucial for "Transformation Management." During a move to SAP S/4HANA or a transition to the cloud, LeanIX helps organizations plan their roadmap by showing the impact of changes on the existing architecture. It provides data-driven insights into which applications are critical, which are obsolete, and where there are gaps in security or compliance. By providing this transparency, LeanIX empowers architects to make informed decisions about where to deploy new BTP services. This prevents the "sprawl" of unmanaged cloud services and ensures that the evolution of the SAP Business Suite is organized, cost-effective, and fully aligned with the broader digital transformation objectives of the company.

### NEW QUESTION # 37

Which SAP BTP service helps businesses automate workflows and approval processes?

- A. SAP Business Network
- B. SAP Ariba
- C. SAP SuccessFactors
- D. SAP Workflow Management

**Answer: D**

Explanation:

Automation is a key pillar of the Intelligent Enterprise, and SAP Workflow Management (now part of the broader SAP Build Process Automation suite) is the engine that drives this. This service enables businesses to digitize and automate business processes that require human intervention, such as multi-level approvals for purchase requisitions, travel requests, or HR onboarding. By moving these processes onto BTP, organizations can eliminate the "paper trail" and ensure that tasks are routed to the right people at the right time, with full auditability.

Positioning Workflow Management as a service on BTP allows for "cross-application" orchestration. For instance, a workflow could start in SAP S/4HANA with a new sales order, trigger an approval in a custom mobile app, and finally update a record in an external CRM system. This level of flexibility is difficult to achieve within a single application silo. Furthermore, the service provides visual "Low-Code" tools that allow business process owners to modify workflows as business rules change, without needing deep technical coding skills. This agility ensures that the SAP Business Suite remains responsive to organizational shifts, making SAP Workflow Management a critical tool for improving operational efficiency and reducing process cycle times across the entire enterprise.
