NEW QUESTION # 51

An administrator needs to upgrade AOS in a vSphere-based Nutanix-node cluster with no automatic live migration. VMs have neither affinity nor anti-affinity rules configured.

What will happen to VMs during the AOS upgrade?

- A. AOS automatically live migrate VMs to other hosts.
- B. Upgrade fails because host can't go in maintenance mode.
- C. VMs will be rebooted on other hosts.
- D. **VMs will continue to run on the same host.**

Answer: D

Explanation:

When upgrading AOS in a vSphere-based Nutanix cluster with no automatic live migration, the VMs will continue to run on the same host, providing that the VMs have neither affinity nor anti-affinity rules configured. The upgrade process will put the host into maintenance mode, which will cause the VMs running on that host to be suspended temporarily. Once the AOS upgrade is completed, the host will be taken out of maintenance mode, and the VMs will be resumed, but running on the same host. The AOS upgrade process does not automatically live migrate VMs to other hosts, because the automatic live migration feature is not enabled in the cluster. NEW QUESTION # 52

An administrator is deploying a virtual firewall on each node in an AHV cluster and wants each VM to maintain affinity to its host. How can an administrator achieve this goal most efficiently?

- A. Create VM Annotations
- B. Set the VM labels as firewalls
- C. Set the VMs as Agent VMs
- D. **Create VM Protection Policies**

Answer: D

Explanation:

An administrator can create VM Protection Policies to enforce VM to host affinity for each VM in the AHV cluster. This will ensure that the VMs are always running on the same host, even if the cluster is resized or the VMs are migrated to other nodes. This is the most efficient way to achieve the desired goal.
