Without doubt, we are the best vendor in this field and we also provide the first-class service for you.

SAP Certified Associate - Security Administrator Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which solution is NOT used to identify security recommendations for the SAP Security Baseline?

- A. SAP EarlyWatch Alert
- B. SAP Security Notes
- C. SAP Code Vulnerability Analyzer
- D. SAP Security Optimization Service

Answer: C

NEW QUESTION # 11

Which of the following rules does SAP recommend you consider when you define a role-naming convention for an SAP S/4HANA on-premise system? Note: There are 3 correct answers to this question.

- A. Role names are system language-independent
- B. Role names are system language-dependent
- C. Role names can be no longer than 20 characters
- D. Role names can be no longer than 30 characters
- E. Role names must NOT start with "SAP"

Answer: A,D,E

NEW QUESTION # 12

In the administration console of the Cloud Identity Services, which authentication providers are available?

Note: There are 2 correct answers to this question.

- A. Concur
- B. Ariba
- C. Successfactors
- D. Fieldglass

Answer: B,C

Explanation:

The administration console of SAP Cloud Identity Services supports integration with specific authentication providers to enable secure user authentication. SAP SuccessFactors and SAP Ariba are available as authentication providers, allowing seamless single sign-on (SSO) and identity management for users accessing these SAP solutions. These providers are integrated to leverage their identity data for authentication within the SAP ecosystem, enhancing security and user experience. In contrast, SAP Concur and SAP Fieldglass are not supported as authentication providers in the Cloud Identity Services administration console, as they primarily focus on expense management and workforce management, respectively, and do not serve as identity providers in this context.

NEW QUESTION # 13

What is the correct configuration setting in table PRGN_CUST for user assignments when transporting roles within a Central User Administration scenario?

- A. SET_IMP_LOCK_USERS = YES
- B. USER_REL_IMPORT = NO
- C. USER_REL_IMPORT = YES
- D. SET_IMP_LOCK_USERS = NO

Answer: B

Explanation:

In a Central User Administration (CUA) scenario, the table PRGN_CUST is used to configure settings for role and user management during transports. The correct setting for user assignments when transporting roles is USER_REL_IMPORT = NO. This setting ensures that user assignments linked to roles in the source system are not imported into the target system during the transport process. In CUA, user assignments are centrally managed in the CUA master system, and importing user assignments from a child system could lead to inconsistencies or overwrites, disrupting centralized control. By setting USER_REL_IMPORT to NO, the system preserves the CUA's authority to manage user-role assignments, ensuring that only role definitions are transported. The options related to SET_IMP_LOCK_USERS control user locking during imports, not user assignments, and USER_REL_IMPORT = YES would incorrectly allow user assignments to be transported, which is undesirable in a CUA setup. This configuration maintains the integrity of centralized user administration in SAP landscapes.

NEW QUESTION # 14

Which privilege types are available in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. Analytic
- **B. Object**
- **C. Package**
- **D. System**
- E. Application

Answer: B,C,D
