

Unparalleled New Study F5CAB4 Questions–100% Marvelous BIG-IP Administration Control Plane Administration Certification Test Questions

Additionally, all operating systems also support this format. The third format is the desktop F5CAB4 Practice Exam software. It is ideal for users who prefer offline BIG-IP Administration Control Plane Administration (F5CAB4) exam practice. This format is supported by Windows computers and laptops. You can easily install this software in your system to use it anytime to prepare for the examination.

In recent years, our F5CAB4 test torrent has been well received and have reached 99% pass rate with all our dedication. As a powerful tool for a lot of workers to walk forward a higher self-improvement, our F5CAB4 certification training continue to pursue our passion for advanced performance and human-centric technology. A good deal of researches has been made to figure out how to help different kinds of candidates to get BIG-IP Administration Control Plane Administration certification. We revise and update the BIG-IP Administration Control Plane Administration guide torrent according to the changes of the syllabus and the latest developments in theory and practice. We base the F5CAB4 Certification Training on the test of recent years and the industry trends through rigorous analysis.

F5CAB4 Exam Prep & F5CAB4 Study Materials & F5CAB4 Actual Test

Latest F5CAB4 exam torrent contains examples and diagrams to illustrate points and necessary notes under difficult points. Remember and practice what F5CAB4 quiz guides contain will be enough to cope with the exam this time. When dealing with the similar exam in this area, our former customers order the second even the third time with compulsion and confidence. That can be all ascribed to the efficiency of our F5CAB4 Quiz guides. On our word of honor, these F5CAB4 test prep will help you who are devoid of efficient practice materials urgently.

F5 F5CAB4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Given a scenario, interpret Service status: This section teaches interpreting service states, analyzing netstat output, and determining whether services are listening on specific ports.
Topic 2	<ul style="list-style-type: none">List which log files could be used to find events andor hardware issues: This section teaches identification of key log files (<ul style="list-style-type: none">varlogltm, secure, audit), understanding event severity levels, and interpreting log messages.

Topic 3	<ul style="list-style-type: none"> Identify and report current device status: This domain covers monitoring BIG-IP operational status through LCD panels, dashboards, Network Map, GUI TMSH commands, and checking high availability states.
Topic 4	<ul style="list-style-type: none"> Identify configured system services: This domain covers verifying proper configuration of essential services including DNS, NTP, SNMP, and syslog.
Topic 5	<ul style="list-style-type: none"> Apply procedural concepts required to manage the state of a high availability pair: This domain covers controlling and monitoring failover states in high availability pairs, including forcing standby offline modes, reporting failover status, and verifying device trust.
Topic 6	<ul style="list-style-type: none"> Apply procedural concepts required to create, manage, and restore a UCS archive: This domain covers UCS backup and restore procedures, understanding backup use cases, proper storage practices, and UCS file contents including private keys.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q58-Q63):

NEW QUESTION # 58

A BIG-IP Administrator needs to load a UCS file but must exclude the license file.

How should the administrator perform this task? (Choose one answer)

- A. From the CLI with command `tmsh load /sys ucs <ucs filename> no-license`
- B. From the CLI with command `tmsh load /sys ucs <ucs filename>`
- C. From the GUI, select the UCS file, uncheck the license box, and click Restore
- D. From the GUI, select the UCS file and click Restore

Answer: A

Explanation:

When restoring a User Configuration Set (UCS) file, BIG-IP allows administrators to selectively exclude the license during the restore process. From the CLI, this is accomplished using the no-license option with the `tmsh load /sys ucs` command.

The command:

```
tmsh load /sys ucs <ucs filename> no-license
```

restores:

- * System configuration
- * Certificates and keys
- * Device and traffic objects

while explicitly excluding the license file, which is required when:

- * Migrating configurations between devices
- * Restoring to hardware with a different license
- * Avoiding license conflicts or overwrites

Why the other options are incorrect:

- * A does not provide the option to exclude the license.
- * B restores the UCS including the license, which does not meet the requirement.
- * D is incorrect because the BIG-IP GUI does not provide a checkbox to exclude the license during UCS restore.

Therefore, the correct and supported method is C.

NEW QUESTION # 59

The BIG-IP Administrator runs the command:

```
netstat -an | grep 443
```

and sees the following output:

```
tcp 0 0 0.0.0.0:443 0.0.0.0:* LISTEN
```

What does this output indicate about the service on port 443? (Choose one answer)

- A. The service is in a standby state and unable to accept connections.
- B. The service is actively listening only on the loopback interface.

- C. The service is actively listening on all interfaces for HTTPS traffic.
- D. The service indicates no connections to the LISTEN port.

Answer: C

Explanation:

In netstat output:

* 0.0.0.0:443 means the service is bound to all available IPv4 interfaces on the system.

* LISTEN indicates the service is actively waiting for incoming connection requests.

Therefore, this output confirms that a service (commonly HTTPS/443, such as the BIG-IP Configuration Utility or an application listener) is actively listening on all interfaces, making B the correct answer.

Why the other options are incorrect:

* A would show 127.0.0.1:443 if it were loopback-only.

* C is incorrect because LISTEN explicitly indicates readiness to accept connections.

* D is unrelated; standby state does not affect socket binding shown by netstat.

Hence, the correct answer is B.

NEW QUESTION # 60

A BIG-IP Administrator makes a configuration change to a Virtual Server on the Standby device of an HA pair. The HA pair is currently configured with Auto-Sync Enabled. What effect will the change have on the HA pair configuration?

- A. The change will be undone next time a configuration change is made on the Active device.
- B. The change will take effect when Auto-Sync propagates the config to the HA pair.
- C. The change will be undone when Auto-Sync propagates the config to the HA pair.
- D. The change will be propagated next time a configuration change is made on the Active device.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration documents: TMOS Device Service Clustering (DSC) allows for configuration changes to be made on any device within a synchronization group. If Auto-Sync is enabled, the Control Plane detects the change on the Standby unit and automatically propagates (pushes) that updated configuration to the other members of the HA pair

NEW QUESTION # 61

As an organization grows, more people have to log into the BIG-IP. Instead of adding more local users, the BIG-IP Administrator is asked to configure remote authentication against a central authentication server.

Which two types of remote server can be used here? (Choose two answers)

- A. RADIUS
- B. OAuth
- C. SAML
- D. LDAP

Answer: A,D

Explanation:

BIG-IP supports remote authentication by integrating with centralized authentication services through its AAA framework. The supported and commonly used remote authentication servers include:

* LDAP (A) Used to authenticate users against directory services such as Active Directory or other LDAP-compliant directories.

* RADIUS (C) Commonly used for centralized authentication, authorization, and accounting, especially in network and security environments.

Why the other options are incorrect:

* OAuth (B) is an authorization framework, not supported as a direct administrative authentication backend for BIG-IP management access.

* SAML (D) is primarily used for single sign-on (SSO) in application authentication scenarios, not for BIG-IP administrative login authentication.

Thus, the correct remote authentication server types are LDAP and RADIUS.

NEW QUESTION # 62

A BIG-IP Administrator needs to determine who changed a Virtual Server configuration. In which log file would the BIG-IP Administrator find this data? (Choose one answer)

- A. /var/log/ltn
- **B. /var/log/audit**
- C. /var/log/secure

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

The audit log (/var/log/audit) records configuration changes made on the BIG-IP system, including:

Who made the change (user account)

What was changed (for example, a virtual server modification)

When the change occurred

How it was performed (GUI, TMSH, or API)

Why the other options are incorrect:

/var/log/secure logs authentication events such as login successes and failures, not configuration changes.

/var/log/ltn logs traffic-management and runtime LTM events, not administrative configuration modifications.

Therefore, the correct log file for tracking who changed a virtual server is /var/log/audit.

NEW QUESTION # 63

.....

Before we start develop a new F5CAB4 study materials, we will prepare a lot of materials. After all, we must ensure that all the questions and answers of the F5CAB4 study materials are completely correct. First of all, we have collected all relevant reference books. Most of the F5CAB4 Study Materials are written by the famous experts in the field. They are widely read and accepted by people. Through careful adaption and reorganization, all knowledge will be integrated in our F5CAB4 study materials.
