

# Valid DEA-C01 Test Voucher | DEA-C01 Training Online

What's more, part of that PassLeader DEA-C01 dumps now are free: <https://drive.google.com/open?id=1WVWRGUP8wbbOWMC4DD7OcUboZtCMTf3R>

You can be a part of this wonderful community. To do this you just need to pass the Snowflake DEA-C01 certification exam. Are you ready to accept this challenge? Looking for the proven and easiest way to crack the Snowflake DEA-C01 certification exam? If your answer is yes then you do not need to go anywhere. Just download PassLeader DEA-C01 exam practice questions and start SnowPro Advanced: Data Engineer Certification Exam (DEA-C01) exam preparation without wasting further time. The PassLeader DEA-C01 Dumps will provide you with everything that you need to learn, prepare and pass the challenging PassLeader Snowflake DEA-C01 exam with flying colors. You must try PassLeader DEA-C01 exam questions today.

## Snowflake DEA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Data Movement:</b> Snowflake Data Engineers and Software Engineers are assessed on their proficiency to load, ingest, and troubleshoot data in Snowflake. It evaluates skills in building continuous data pipelines, configuring connectors, and designing data sharing solutions.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Security:</b> The Security topic of the DEA-C01 test covers the principles of Snowflake security, including the management of system roles and data governance. It measures the ability to secure data and ensure compliance with policies, crucial for maintaining secure data environments for Snowflake Data Engineers and Software Engineers.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Data Transformation:</b> The SnowPro Advanced: Data Engineer exam evaluates skills in using User-Defined Functions (UDFs), external functions, and stored procedures. It assesses the ability to handle semi-structured data and utilize Snowpark for transformations. This section ensures Snowflake engineers can effectively transform data within Snowflake environments, critical for data manipulation tasks.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• <b>Storage and Data Protection:</b> The topic tests the implementation of data recovery features and the understanding of Snowflake's Time Travel and micro-partitions. Engineers are evaluated on their ability to create new environments through cloning and ensure data protection, highlighting essential skills for maintaining Snowflake data integrity and accessibility.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• <b>Performance Optimization:</b> This topic assesses the ability to optimize and troubleshoot underperforming queries in Snowflake. Candidates must demonstrate knowledge in configuring optimal solutions, utilizing caching, and monitoring data pipelines. It focuses on ensuring engineers can enhance performance based on specific scenarios, crucial for Snowflake Data Engineers and Software Engineers.</li></ul>

## How Snowflake DEA-C01 Exam Questions Can Help You in Preparation?

Being scrupulous in this line over ten years, our experts are background heroes who made the high quality and high accuracy DEA-C01 study quiz. By abstracting most useful content into the DEA-C01 guide materials, they have helped former customers gain success easily and smoothly. We can claim that if you prepare with our DEA-C01 Exam Braindumps for 20 to 30 hours, then you will be confident to pass the exam.

## Snowflake SnowPro Advanced: Data Engineer Certification Exam Sample Questions (Q244-Q249):

### NEW QUESTION # 244

A Data Engineer is working on a Snowflake deployment in AWS eu-west-1 (Ireland). The Engineer is planning to load data from staged files into target tables using the copy into command Which sources are valid? (Select THREE)

- A. External stage in an Amazon S3 bucket on AWS eu-west-1 (Ireland)
- B. Internal stage on GCP us-central1 (Iowa)
- C. Internal stage on AWS eu-central-1 (Frankfurt)
- D. External stage in an Amazon S3 bucket on AWS eu-central 1 (Frankfurt)
- E. SSO attached to an Amazon EC2 instance on AWS eu-west-1 (Ireland)
- F. External stage on GCP us-central1 (Iowa)

**Answer: A,D,F**

Explanation:

Explanation

The valid sources for loading data from staged files into target tables using the copy into command are:

External stage on GCP us-central1 (Iowa): This is a valid source because Snowflake supports cross-cloud data loading from external stages on different cloud platforms and regions than the Snowflake deployment.

External stage in an Amazon S3 bucket on AWS eu-west-1 (Ireland): This is a valid source because Snowflake supports data loading from external stages on the same cloud platform and region as the Snowflake deployment.

External stage in an Amazon S3 bucket on AWS eu-central 1 (Frankfurt): This is a valid source because Snowflake supports cross-region data loading from external stages on different regions than the Snowflake deployment within the same cloud platform. The invalid sources are:

Internal stage on GCP us-central1 (Iowa): This is an invalid source because internal stages are always located on the same cloud platform and region as the Snowflake deployment. Therefore, an internal stage on GCP us-central1 (Iowa) cannot be used for a Snowflake deployment on AWS eu-west-1 (Ireland).

Internal stage on AWS eu-central-1 (Frankfurt): This is an invalid source because internal stages are always located on the same region as the Snowflake deployment. Therefore, an internal stage on AWS eu-central-1 (Frankfurt) cannot be used for a Snowflake deployment on AWS eu-west-1 (Ireland).

SSO attached to an Amazon EC2 instance on AWS eu-west-1 (Ireland): This is an invalid source because SSO stands for Single Sign-On, which is a security integration feature in Snowflake, not a data staging option.

### NEW QUESTION # 245

Mark the Incorrect Statements with respect to types of streams supported by Snowflake?

- A. An append-only stream returns the appended rows only and therefore can be much more performant than a standard stream for extract, load, transform (ELT).
- B. Insert-only Stream supported on external tables only.
- C. An insert-only stream tracks row inserts & Delete ops only
- D. Standard streams cannot retrieve update data for geospatial data.

**Answer: C**

Explanation:

Explanation

Standard Stream:

Supported for streams on tables, directory tables, or views. A standard (i.e. delta) stream tracks all DML changes to the source object, including inserts, updates, and deletes (including table truncates). This stream type performs a join on inserted and deleted rows in the change set to provide the row level delta. As a net effect, for example, a row that is inserted and then deleted between two transactional points of time in a table is removed in the delta (i.e. is not returned when the stream is queried).

Append-only Stream:

Supported for streams on standard tables, directory tables, or views. An append-only stream tracks row inserts only. Update and

delete operations (including table truncates) are not recorded. For example, if 10 rows are inserted into a table and then 5 of those rows are deleted before the offset for an append-only stream is advanced, the stream records 10 rows.

An append-only stream returns the appended rows only and therefore can be much more performant than a standard stream for extract, load, transform (ELT) and similar scenarios that depend exclusively on row inserts. For example, a source table can be truncated immediately after the rows in an append-only stream are consumed, and the record deletions do not contribute to the overhead the next time the stream is queried or consumed.

**Insert-only Stream:**

Supported for streams on external tables only. An insert-only stream tracks row inserts only; they do not record delete operations that remove rows from an inserted set (i.e. no-ops). For example, in-between any two offsets, if File1 is removed from the cloud storage location referenced by the external table, and File2 is added, the stream returns records for the rows in File2 only. Unlike when tracking CDC data for standard tables, Snowflake cannot access the historical records for files in cloud storage.

#### NEW QUESTION # 246

To help manage STAGE storage costs, Data engineer recommended to monitor stage files and remove them from the stages once the data has been loaded and the files which are no longer needed. Which option he can choose to remove these files either during data loading or afterwards?

- A. Files no longer needed, can be removed using the PURGE=TRUE command.
- B. He can choose to remove stage files during data loading (using the COPY INTO <table> command).
- C. Files no longer needed, can be removed using the REMOVE command.
- D. Script can be used during data loading & post data loading with DELETE command.

**Answer: A,B**

Explanation:

Explanation

Managing Data Files

Staged files can be deleted from a Snowflake stage (user stage, table stage, or named stage) using the following methods:

Files that were loaded successfully can be deleted from the stage during a load by specifying the PURGE copy option in the COPY INTO <table> command.

After the load completes, use the REMOVE command to remove the files in the stage.

Removing files ensures they aren't inadvertently loaded again. It also improves load performance, because it reduces the number of files that COPY commands must scan to verify whether existing files in a stage were loaded already.

#### NEW QUESTION # 247

If you need to connect to Snowflake using a BI tool or technology, which of the following BI tools and technologies are known to provide native connectivity to Snowflake?

- A. SISENSE
- B. PROTEGRITY
- C. ALATION
- D. SELECT STAR

**Answer: A**

Explanation:

Explanation

SISENSE is BI tools and technologies which is known to provide native connectivity to Snowflake, Rest of the options given are security & governance tools supported by SnowFlake.

Business intelligence (BI) tools enable analyzing, discovering, and reporting on data to help executives and managers make more informed business decisions. A key component of any BI tool is the ability to deliver data visualization through dashboards, charts, and other graphical output.

For More details around supported BI Tools in Snowflake Ecosystem, do refer the link below:

<https://docs.snowflake.com/en/user-guide/ecosystem-bi>

#### NEW QUESTION # 248

A finance company receives data from third-party data providers and stores the data as objects in an Amazon S3 bucket.

The company ran an AWS Glue crawler on the objects to create a data catalog. The AWS Glue crawler created multiple tables. However, the company expected that the crawler would create only one table. The company needs a solution that will ensure the AWS Glue crawler creates only one table. Which combination of solutions will meet this requirement? (Choose two.)

- A. Ensure that the structure of the prefix for each S3 object name is consistent.
- B. Ensure that the object format, compression type, and schema are the same for each object.
- C. Ensure that all S3 object names follow a similar pattern.
- D. Ensure that the schema is the same for each object. Do not enforce consistency for the file format and compression type of each object.
- E. Ensure that the object format and schema are the same for each object. Do not enforce consistency for the compression type of each object.

**Answer: A,B**

## NEW QUESTION # 249

.....

The DEA-C01 practice materials are a great beginning to prepare your exam. Actually, just think of our DEA-C01 practice materials as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time. It is estimated conservatively that the passing rate of the exam is over 98 percent with our DEA-C01 Study Materials as well as considerate services. We not only provide all candidates with high pass rate study materials, but also provide them with good service.
