Adobe Experience Manager Architect Master Sample Questions (Q23-Q28):

NEW QUESTION # 23

During development the AEM Publisher server keeps crashing randomly. The deployment included a new static FAQ component that was used in the websites Contact Us page. An Architect investigates to find the root cause for the random failures, and notices the following parameters:

- * The server slows down when requests are sent to the Contact us page
- * The number of requests to the page were very few
- * Heap dump shows a large number of instances of the FAQ component

What is likely causing this issue?

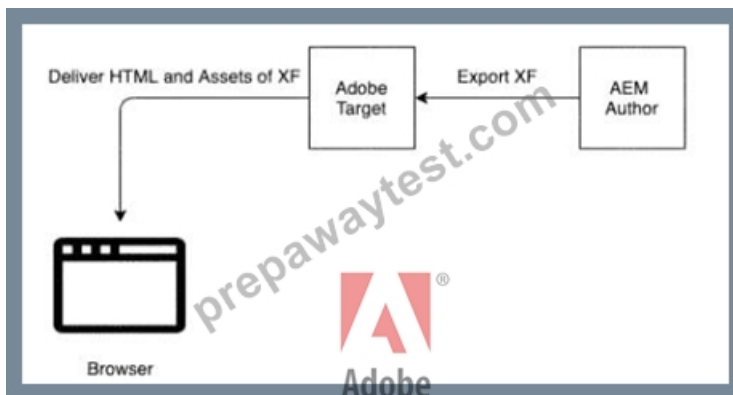

- A. The JVM garbage collection is not running.
- B. The component has a cyclic dependency to itself
- C. The page was not cached in the Dispatcher.
- D. The component triggers a traversal query.

Answer: B

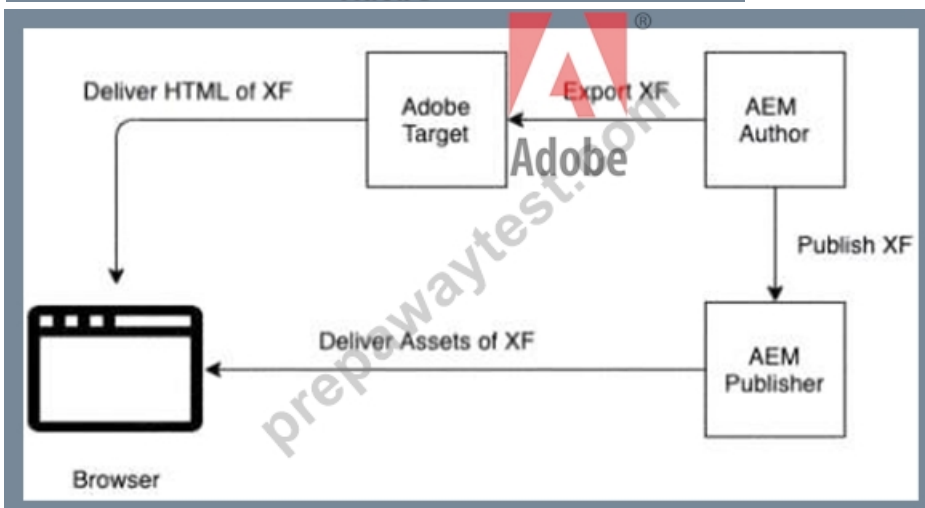

NEW QUESTION # 24

A financial sector client is using AEM 6.5 on premise. The creative team needs to create the content for the various marketing campaigns that are scheduled. The client wants to use Experience Fragments (XF) to accelerate content creation for marketing purposes.

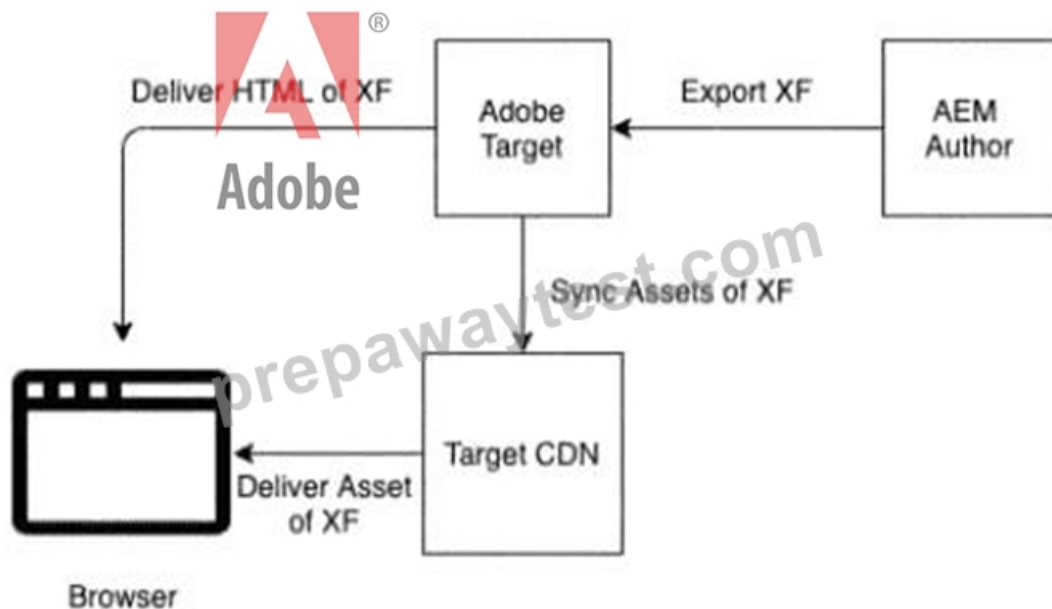

Which Data flow diagram should an Architect use to communicate requirements to the client network team?

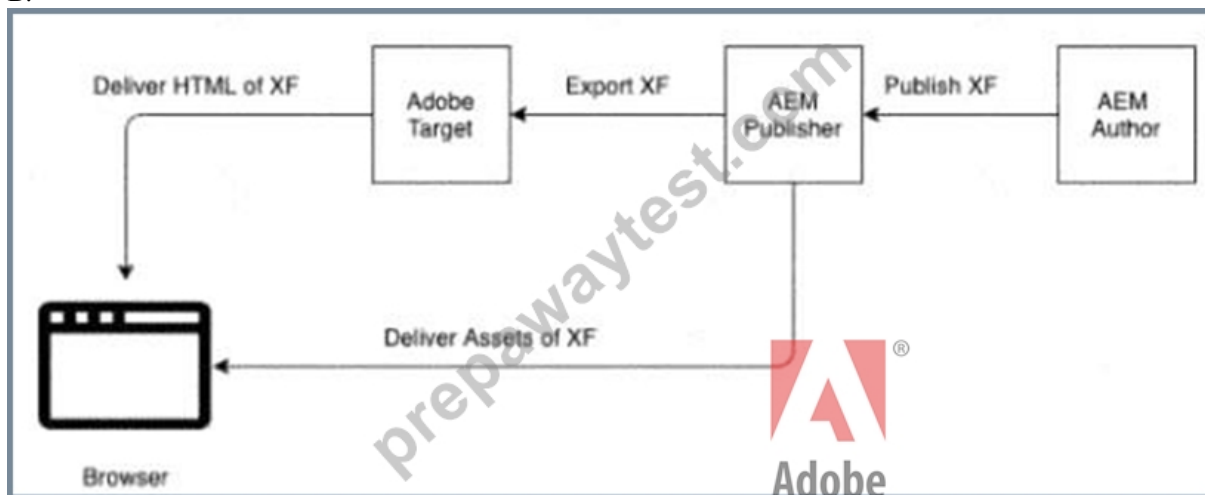

- A.

- B.

- C.
- D.

Answer: A

Explanation:

A data flow diagram (DFD) is a graphical representation of the flow of data through a system. It shows how data is input, processed, stored, and output in a system. A DFD can be used to communicate requirements to the client network team by showing them how data flows between different components and entities in the system.

NEW QUESTION # 25

A client designs a new experience for one of their brand sites with the following parameters:

- * The new experience should behave like a desktop application
- * There is a lot of dynamic content in the app
- * SEO and initial page load are a top concern for the client
- * The client's marketing team needs to be able to author the content with a WYSIWYG editor Which approach should the Architect use to meet these requirements?

- A. Use AEM as a headless CMS
- B. Use the traditional server side components on the website
- C. Use the SPA Editor SDK with Server Side Rendering
- D. Create a set of API-driven components

Answer: D
