

# Salesforce Mule-Dev-202 Dumps-Ensure your Brilliant Success In Exam

DOWNLOAD the newest ITexamReview Mule-Dev-202 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=14eJ590aVeg36ooihcozdYiAS3LqmpbxK>

As is known to us, there are best sale and after-sale service of the Mule-Dev-202 certification training materials all over the world in our company. Our company has employed many excellent experts and professors in the field in the past years, in order to design the best and most suitable Mule-Dev-202 Latest Questions for all customers. More importantly, it is evident to all that the Mule-Dev-202 training materials from our company have a high quality, and we can make sure the quality of our products will be higher than other study materials in the market.

The exact replica of the real Salesforce Mule-Dev-202 exam questions is another incredible feature of the web-based practice test software. With this, you can kill your Salesforce Mule-Dev-202 exam anxiety. Another format of the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) practice test material is the Mule-Dev-202 desktop practice exam software. All traits of the web-based Mule-Dev-202 practice test are present in this version.

## Hot Mule-Dev-202 Latest Exam Camp | Pass-Sure Salesforce Actual Mule-Dev-202 Test Pdf: Salesforce Certified MuleSoft Hyperautomation Developer

Generally speaking, a satisfactory Mule-Dev-202 study material should include the following traits. High quality and accuracy rate with reliable services from beginning to end. As the most professional group to compile the content according to the newest information, our Mule-Dev-202 Practice Questions contain them all, and in order to generate a concrete transaction between us we take pleasure in making you a detailed introduction of our Mule-Dev-202 exam materials.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q57-Q62):

### NEW QUESTION # 57

Which type of integration project should be implemented with MuleSoft Composer?

- A. Automating UI interactions using image recognition
- B. Batch processing of larger-than-memory files with conditional logic within the batch steps
- C. Data transformation from a source system to a target system by a non-technical user
- D. Long running workflows that require manual steps and approvals by users

**Answer: C**

Explanation:

MuleSoft Composer is designed for business users to create integrations without deep technical knowledge. It is ideal for scenarios that involve:

Data Transformation and Integration:

Non-technical users can easily connect different systems, automate data transfers, and transform data from one system to another using a no-code interface.

MuleSoft Composer provides pre-built connectors and an intuitive interface to set up these integrations.

Simplified Automation:

The platform is optimized for creating straightforward, rule-based automations where complex coding is not required.

Therefore, automating data transformation tasks by a non-technical user fits perfectly with MuleSoft Composer's capabilities.

### NEW QUESTION # 58

Northern Trail Outfitters needs to update multiple systems outside of Salesforce based on record updates within Salesforce. A hyperautomation practitioner needs to configure Salesforce to call several APIs created by the MuleSoft development team from within a Salesforce flow.

What specifications must be imported into Salesforce to make external services available to a Salesforce flow that enables external invocable actions?

- **A. Open API specifications**
- B. RAML API specifications
- C. External API specifications
- D. Anypoint API specifications

**Answer: A**

Explanation:

To enable Salesforce to call external services within a flow, the appropriate specifications must be imported to make these external services available as invocable actions. The correct specification is Open API specifications. OpenAPI Specification (formerly known as Swagger) is a standard for defining APIs which can be easily imported into Salesforce to facilitate the integration and invocation of external services.

Import OpenAPI Specifications: Salesforce allows the import of OpenAPI specifications, which define the available endpoints and operations of an API, making them accessible as invocable actions in a Salesforce flow.

Creating External Services: By importing an OpenAPI definition into Salesforce, it creates an External Service, which you can then use within Flow to interact with the defined APIs.

Flow Integration: Once imported, these services can be integrated into Salesforce Flows to automate processes that require interaction with external systems.

Salesforce External Services and API Integrations

### NEW QUESTION # 59

An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

- **A. Create a second MuleSoft Composer flow that starts when the RPA process is complete.**
- B. Using best practices, how should the results be consumed by MuleSoft Composer?
- C. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.
- D. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.
- E. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.

**Answer: A**

Explanation:

When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:

Second MuleSoft Composer Flow:

Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not

held up while waiting for the long-running RPA process to finish.

The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.

Trigger Mechanism:

Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.

Best Practices:

This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and troubleshoot.

### NEW QUESTION # 60

A MuleSoft developer at AnyAirlines is tasked with creating a new API for an integration.

According to best practices, what is the first step they need to perform?

- A. Create a case in Salesforce.
- **B. Create a RAML definition in Design Center.**
- C. Create a new project in Anypoint Studio.
- D. Install a standalone Mule runtime on their local machine.

**Answer: B**

Explanation:

**RAML Definition Creation:**The first step in creating a new API as per MuleSoft best practices is to create a RAML (RESTful API Modeling Language) definition in the Design Center. This step is critical as it outlines the API's structure, endpoints, methods, and data types, providing a clear blueprint for subsequent development.

Reference:MuleSoft API Design Best Practices

**Project Creation in Anypoint Studio:**Once the RAML definition is created, the next step would be to generate the API project in Anypoint Studio. This IDE allows developers to implement the API logic as defined in the RAML.

Reference:Getting Started with Anypoint Studio

**Mule Runtime Installation:**Installing Mule runtime is necessary for running and testing Mule applications locally. However, this step is secondary to defining the API's structure.

Reference:Mule Runtime Installation

**Case Creation in Salesforce:**Creating a case in Salesforce is not relevant to the API development process but may be necessary for support or project management purposes.

Reference:Salesforce Case Management

### NEW QUESTION # 61

AnyAirlines is developing an RPA process to extract information from a legacy system. To capture the manual workflow, they leverage RPA Recorder.

Which two best practices should they be aware of when working with the autogenerated workflow code?

(Choose two.)

- **A. The autogenerated workflows may contain sensitive information that must be removed.**
- **B. Some autogenerated code must be replaced with more robust or specialized action steps.**
- C. All autocaptured information is for documentation purposes only.
- D. All keystrokes and mouse clicks in the autogenerated code must be disabled before deploying to production.

**Answer: A,B**

Explanation:

When developing an RPA process using RPA Recorder, it is essential to be mindful of the following best practices concerning the autogenerated workflow code:

**Replace Autogenerated Code:**

**Robustness:** Some of the autogenerated code may not be optimized for robustness or specific use cases. It is often necessary to review and replace parts of the autogenerated workflow with more robust or specialized action steps to ensure reliability and accuracy.

Specialization: Customizing the workflow to fit the specific requirements of the process can improve performance and handle exceptions better.

Remove Sensitive Information:

Sensitive Data: Autogenerated workflows might capture sensitive information such as usernames, passwords, or other confidential data. It is crucial to identify and remove or mask this information before deploying the RPA process to production to maintain security and compliance.

Compliance: Ensuring that sensitive information is handled appropriately helps in adhering to data protection regulations and organizational policies.
