

Microsoft AB-900 Exam Answers | Latest AB-900 Test Camp

Pass4SureQuiz exam dumps are written by IT elite who have more than ten years experience, through research and practice. Pass4SureQuiz provides you with the latest and the most accurate questions and answers. Pass4SureQuiz exists for your success. To choose Pass4SureQuiz is to choose your success. If you want to pass Microsoft AB-900 Certification Exam, Pass4SureQuiz is your unique choice.

Microsoft AB-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Perform basic administrative tasks for Copilot and agents: This domain focuses on managing Copilot and agents, including licensing, feature controls, and usage monitoring. It also covers creating agents, managing prompts, configuring user access, and monitoring agent activity through admin centers.

Topic 2	<ul style="list-style-type: none"> • Understand data protection and governance tasks for Microsoft 365 and Copilot: This domain explains how Microsoft Purview protects and governs organizational data through classification, sensitivity labels, retention, and compliance tools. It also covers how Copilot accesses data, follows permissions, and how administrators monitor risks, alerts, and oversharing.
Topic 3	<ul style="list-style-type: none"> • Identify the core features and objects of Microsoft 365 services: This domain covers the main Microsoft 365 objects such as users, groups, licenses, mailboxes, SharePoint sites, and Teams. It also focuses on managing organization settings, roles, authentication, authorization, and core security features using Microsoft Entra and Microsoft Defender.

Latest AB-900 Test Camp | Examinations AB-900 Actual Questions

Just the same as the free demo, we have provided three kinds of versions of our AB-900 preparation exam, among which the PDF version is the most popular one. It is understandable that many people give their priority to use paper-based materials rather than learning on computers, and it is quite clear that the PDF version is convenient for our customers to read and print the contents in our AB-900 Study Guide. After printing, you not only can bring the study materials with you wherever you go, but also can make notes on the paper at your liberty. Do not wait and hesitate any longer, your time is precious!

Microsoft 365 Copilot & Agent Administration Fundamentals Sample Questions (Q33-Q38):

NEW QUESTION # 33

You are reviewing your company's security policies as part of a Zero Trust strategy. Which statement accurately describes the Zero Trust principles?

- A. Zero Trust removes the need to regularly review and adjust access permissions.
- **B. Zero Trust assumes breach and verifies each request.**
- C. Zero Trust treats all requests from your corporate network as trustworthy.
- D. Zero Trust enhances the user experience by minimizing authentication prompts.

Answer: B

Explanation:

The correct answer is A . Microsoft Learn defines Zero Trust as a security strategy built on the principles verify explicitly , use least privilege access , and assume breach . Microsoft also summarizes Zero Trust as a model that assumes breach and verifies every request , rather than trusting users, devices, or traffic simply because they originate from inside the corporate network. This is the key reason option A is correct.

Under Zero Trust, every access request should be evaluated continuously using available signals such as identity, device state, location, service, and risk.

Option B is incorrect because improving user experience is not the defining principle of Zero Trust. Option C is incorrect because Zero Trust requires ongoing review and adjustment of permissions, especially through least privilege and risk-based access. Option D is incorrect because Zero Trust explicitly rejects implicit trust based on network location. Microsoft states that organizations should reduce reliance on the traditional idea that anything on the internal network is automatically safe or trustworthy.

NEW QUESTION # 34

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE Each correct selection is worth one point

Answer:

Explanation:

Explanation:

The correct selections are Yes, Yes, Yes . For statement 1, Microsoft Support explains that if you are not a site owner, you might

still be able to invite other people to the site , although the invitation can generate an access request that a site owner approves or declines. Microsoft also states that site users have the opportunity to invite other people to collaborate on sites , unless that feature is disabled. That makes the statement true.

For statement 2, Microsoft Learn states that in SharePoint you can give people permissions to a site by adding individual users, security groups, or Microsoft 365 groups to one of the three SharePoint groups, including the Members group. That directly supports the statement.

For statement 3, Microsoft documents that site ownership and membership can be managed by adding or removing owners, members, site owners, site members, and site visitors . For group-connected sites, Microsoft also documents that owners can manage group ownership and remove owner status. Therefore, a site owner can remove another site owner, provided at least one owner remains.

NEW QUESTION # 35

Your organization has a Microsoft 365 subscription.

The HR department at your company asks for a copy of all the recent files that were modified by a user named User1.

What should you use in the Microsoft Purview portal? To answer, select the appropriate solutions in the answer area.

Answer:

Explanation:

Explanation:

The correct answer is eDiscovery . In Microsoft Purview, eDiscovery is the solution used to search for content and export copies of that content from Microsoft 365 locations such as SharePoint and OneDrive.

Microsoft Learn states that when you export search results from eDiscovery, copies of native Office documents and other documents are exported . That directly matches the requirement to provide HR with a copy of files .

By contrast, Audit is primarily used to investigate user and admin activity records and can export those audit records to CSV , but it does not export the actual files themselves. Audit would help identify that User1 modified files, but the question asks for copies of the recent files modified by User1 , which is an eDiscovery content search and export scenario rather than an activity-log reporting scenario.

So, among the Microsoft Purview solutions shown, the appropriate selection is eDiscovery because it is the Purview tool designed to find and export the actual content items HR wants to receive.

NEW QUESTION # 36

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation:

The correct answer is adding a public DNS record . Microsoft documents that when you add a custom domain to Microsoft 365, you must first prove ownership of that domain before Microsoft 365 can use it for services such as Exchange Online, SharePoint, and user sign-ins. The standard verification method described by Microsoft is to add a DNS record at your domain registrar or DNS hosting provider. Microsoft commonly uses a TXT record for verification, although in some cases an MX record can also be used depending on the setup flow. This is why "adding a public DNS record" is the right completion for the sentence.

The other choices are not the standard Microsoft 365 domain verification process. Microsoft's admin guidance does not use confirming your business address , uploading a certificate , or uploading a webpage as the normal method for proving ownership of a domain in Microsoft 365. Domain verification is specifically tied to DNS because DNS is the authoritative public system used to prove control over the domain name.

NEW QUESTION # 37

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

The correct selections are No, Yes, No . Microsoft defines Zero Trust as a security strategy and explicitly states that it isn't a product or a service . Instead, it is an approach based on principles such as verify explicitly , use least privilege access , and assume breach . That makes statement 2 true.

Statement 1 is false because Zero Trust does not require an Azure subscription. Microsoft provides Zero Trust guidance across many environments, including Microsoft 365, Copilot, Azure, and hybrid scenarios. It is a strategy that can be implemented with different technologies and is not dependent on owning Azure specifically.

Statement 3 is also false because there is no single switch in the Microsoft 365 admin center to "enable Zero Trust" for an organization. Microsoft's documentation presents Zero Trust as a set of policies, configurations, and deployment steps across services such as Microsoft Entra, Intune, Defender, and Microsoft 365 workloads, not as one admin-center toggle.
