#### **NEW QUESTION # 136**

A counselor who provides services for severely depressed clients decides to take a vacation. Confident that counseling efforts have stabilized clients, the counselor concludes there is no need to provide client access to another helping professional while the counselor is away. This case illustrates unethical counselor behavior known as

- A. abandonment.
- B. nonmaleficence.
- C. faulty termination.

**Answer: A**

Explanation:

Abandonment occurs when a counselor ends a professional relationship with a client prematurely and without appropriate arrangements for ongoing care. Counselors must ensure continuity of care, particularly for high- risk clients, by providing access to alternative support when they are unavailable. Failure to do so is considered unethical and may endanger client welfare.

Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; American Counseling Association (ACA) Code of Ethics (2014).

#### **NEW QUESTION # 137**

A client states, "What's bothering me is that I might have a problem with drinking. I don't think I am an alcoholic or anything, but I have missed a lot of work due to hangovers." The counselor responds, "We have some videos on alcohol abuse that would be good for you to take a look at." In this illustration, the counselor has made an empathy error known as

- A. discordance.
- B. improper interpretation.
- C. advice-giving.

**Answer: C**

#### Explanation:

In this scenario, the counselor's response skips over the client's feelings and self-reflection, immediately offering advice and resources. This is an example of the advice-giving empathy error, where the counselor provides a solution instead of first demonstrating understanding or empathy. Effective counseling requires exploring the client's emotions and ambivalence before offering suggestions.

#### NEW QUESTION # 138

Which of the following is a true experimental design?

- A. randomly assigned between-groups
- B. quasi-experimental
- C. single-subject

#### Answer: A

#### Explanation:

A true experimental design is characterized by random assignment of participants to groups and the manipulation of an independent variable. Randomly assigned between-groups designs meet these criteria.

Quasi-experimental designs lack random assignment, and single-subject designs focus on individuals rather than groups. "True experimental designs require random assignment and control over variables." Reference: Helwig, A. A. (2020). CPCE Study Guide and Review.
