2026 Amazon Realistic AWS-Solutions-Architect-Associate Real Torrent Free PDF

As a matter of fact, since the establishment, we have won wonderful feedback and ceaseless business, continuously working on developing our AWS-Solutions-Architect-Associate test prep. We have been specializing AWS-Solutions-Architect-Associate exam dumps many years and have a great deal of long-term old clients, and we would like to be a reliable cooperater on your learning path and in your further development. While you are learning with our AWS-Solutions-Architect-Associate Quiz guide, we hope to help you make out what obstacles you have actually encountered during your approach for AWS-Solutions-Architect-Associate exam torrent through our PDF version, only in this way can we help you win the AWS-Solutions-Architect-Associate certification in your first attempt.

To be eligible to take the AWS Certified Solutions Architect - Associate exam, candidates must have at least one year of experience

designing and deploying scalable, highly available, and fault-tolerant systems on AWS. Candidates should also have a solid understanding of AWS core services, security, and compliance, as well as experience with AWS CLI, AWS CloudFormation, and AWS Management Console.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q555-Q560):

NEW QUESTION # 555

A company runs an on-premises application that is powered by a MySQL database. The company is migrating the application to AWS to increase the application's elasticity and availability. The current architecture shows heavy read activity on the database during times of normal operation. Every 4 hours, the company's development team pulls a full export of the production database to populate a database in the staging environment. During this period, users experience unacceptable application latency. The development team is unable to use the staging environment until the procedure completes. A solutions architect must recommend replacement architecture that alleviates the application latency issue. The replacement architecture also must give the development team the ability to continue using the staging environment without delay. Which solution meets these requirements?

- **A. Use Amazon Aurora MySQL with Multi-AZ Aurora Replicas for production. Use database cloning to create the staging database on-demand.**
- B. Use Amazon Aurora MySQL with Multi-AZ Aurora Replicas for production. Populate the staging database by implementing a backup and restore process that uses the mysqldump utility.
- C. Use Amazon RDS for MySQL with a Multi-AZ deployment and read replicas for production. Use the standby instance for the staging database.
- D. Use Amazon RDS for MySQL with a Multi-AZ deployment and read replicas for production. Populate the staging database by implementing a backup and restore process that uses the mysqldump utility.

Answer: A

NEW QUESTION # 556

You are designing an SaaS solution that requires HTTPS clients to be authenticated by the Web server using client certificate authentication. The solution must be resilient.

Which of the following options would you consider for configuring the web server infrastructure? (Choose 2 answers)

- A. Configure your Web servers with EIPs. Place the Web servers in a Route53 Record Set and configure health checks against all Web servers.
- **B. Configure ELB with TCP listeners on TCP/443. And place the Web servers behind it.**
- **C. Configure your web servers as the origins for a CloudFront distribution. Use custom SSL certificates on your CloudFront distribution.**
- D. Configure ELB with HTTPS listeners, and place the Web servers behind it.

Answer: B,C

NEW QUESTION # 557

A customer needs to capture all client connection information from their load balancer every five minutes. The company wants to use this data for analyzing traffic patterns and troubleshooting their applications. Which of the following options meets the customer requirements?

- A. Enable AWS CloudTrail for the load balancer
- **B. Enable access logs on the load balancer**
- C. Install the Amazon CloudWatch logs agent on the load balancer
- D. Enable Amazon CloudWatch metrics on the load balancer

Answer: B

NEW QUESTION # 558

A company has created an image analysis application in which users can upload photos and add photo frames to their images. The users upload images and metadata to indicate which photo frames they want to add to their images. The application uses a single Amazon EC2 instance and Amazon DynamoDB to store the metadata.

The application is becoming more popular, and the number of users is increasing. The company expects the number of concurrent users to vary significantly depending on the time of day and day of week. The company must ensure that the application can scale to meet the needs of the growing user base.
Which solution meets these requirements?

- **A. Use AWS Lambda to process the photos. Store the photos in Amazon S3. Retain DynamoDB to store the metadata.**
- B. Increase the number of EC2 instances to three. Use Provisioned IOPS SSD (io2) Amazon Elastic Block Store (Amazon EBS) volumes to store the photos and metadata.
- C. Use AWS Lambda to process the photos. Store the photos and metadata in DynamoDB.
- D. Use Amazon Kinesis Data Firehose to process the photos and to store the photos and metadata.

Answer: A

NEW QUESTION # 559

Any person or application that interacts with AWS requires security credentials. AWS uses these credentials to identify who is making the call and whether to allow the requested access. You have just set up a VPC network for a client and you are now thinking about the best way to secure this network. You set up a security group called `vpsecuritygroup`. Which following statement is true in respect to the initial settings that will be applied to this security group if you choose to use the default settings for this group?

- A. Allow all inbound traffic and allow all outbound traffic.
- **B. Allow no inbound traffic and allow all outbound traffic.**
- C. Allow all inbound traffic and allow no outbound traffic.
- D. Allow inbound traffic on port 80 only and allow all outbound traffic.

Answer: B

Explanation:

Amazon VPC provides advanced security features such as security groups and network access control lists to enable inbound and outbound filtering at the instance level and subnet level.

AWS assigns each security group a unique ID in the form `sg-xxxxxxx`. The following are the initial settings for a security group that you create:

Allow no inbound traffic

Allow all outbound traffic
