To fit in this amazing and highly accepted exam, you must prepare for it with high-rank practice materials like our C_S4EWM_2601 study materials. They are the Best choice in terms of time and money. All contents of C_S4EWM_2601 training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our C_S4EWM_2601 Quiz guide.

SAP C_S4EWM_2601 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: System Integration and Customizing	8–12%	- Distribute master data and configure delivery documents - Integrate EWM with SAP S/4HANA Cloud
Topic 2: Outbound Processes	11–20%	- Picking, packing and kitting - Production supply integration and cross-docking - Wave management and outbound delivery processing
Topic 3: Managing Clean Core	≤10%	- Apply clean core principles in S/4HANA Cloud
Topic 4: Process and Layout Oriented Storage Control	8–12%	- Define layout-oriented storage control - Customize storage control settings

Topic 5: Warehouse Process Types, Tasks and Strategies	8–12%	- Warehouse order and task creation - Configure putaway and removal strategies - Define process types and determination rules
Topic 6: Inbound Processes	11–20%	- Inbound delivery processing and goods receipt - Value Added Services (VAS) and deconsolidation - Cross-docking and quality inspection integration
Topic 7: Internal Warehouse Operations	8%	- Physical inventory processes - Replenishment and stock transfers
Topic 8: Warehouse Structure, Resource Management and EWM Master Data	>12%	- Set up resource management - Create and maintain master data: products, storage bins, packaging specs, business partners - Define warehouse structure and organizational units
Topic 9: Cross Topics	8–12%	- Warehouse monitoring and cockpit usage - Batch and serial number management - Labor management and exception handling

To make your review more comfortable and effective, we made three versions of C_S4EWM_2601 study guide as well as a series of favorable benefits for you. We are concerted company offering tailored services which include not only the newest and various versions of C_S4EWM_2601 Practice Engine, but offer one-year free updates services with patient staff offering help 24/7. It means that as long as our professionals update the C_S4EWM_2601 learning quiz, you will receive it for free.

SAP Certified - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q68-Q73):

NEW QUESTION # 68

CHALLENGE 3 Returnable Container Resource Execution Evidence Returnable container movements are completed during UAT, but several were performed while users had broad resource coverage beyond their normal movement responsibility.

What should be validated before accepting the result?

Response:

- A. Whether broad resource coverage should become the default for all users during the rollout.
- B. Whether task completion alone is enough because containers reached the expected staging area.
- C. Whether the same container movements can be completed and evidenced by the assigned resource group.
- D. Whether returnable containers can be excluded from mobile execution and processed manually after activation.

Answer: C

Explanation:

Feedback:

The UAT result must show that the intended resource group can execute returnable container movements. Task completion alone is not sufficient if broad coverage hides the resource responsibility dependency.

NEW QUESTION # 69

A spare-parts warehouse is being introduced in SAP S/4HANA Extended Warehouse Management using a web-based configuration environment aligned to an existing mixed deployment template. The consultant has copied the organizational design from another site and completed storage type and bin creation. During initial testing, users can post inbound and outbound documents, but monitor views for the new warehouse show inconsistent stock visibility, and follow-on activities cannot be started reliably. The warehouse number exists, but some execution-relevant objects appear to reference another warehouse structure that was used as the original template.

The project sponsor wants the smallest structural correction possible because master data preparation for the new warehouse is already underway.

What should the consultant verify first?

Response:

- A. whether the foundational warehouse structure assignments were completed consistently for the new warehouse number and its execution-relevant objects.
- B. whether the copied storage bins were created with the correct coordinate layout for the new physical building.
- C. whether wave templates from the original site should be imported before any inbound or outbound activity is tested.
- D. whether shipping point determination should be simplified until all stock is fully visible in the monitor.

Answer: A

Explanation:

Feedback:

The issue is structural and affects multiple execution-relevant activities. The warehouse number exists, but some referenced objects still appear tied to the original template. That indicates inconsistent foundational structure assignment rather than a localized process setting. Before adjusting waves, shipping, or bin coordinates, the consultant should confirm that the basic warehouse organizational structure is consistently assigned for the new warehouse context.

NEW QUESTION # 70

A home appliances distributor is validating a newly introduced warehouse exception path in SAP S/4HANA Extended Warehouse Management through a web-based quality environment. The relevant customizing was imported successfully, and existing putaway and picking flows remain stable. During testing, users can reach the affected process step, but the expected exception option does not appear for one warehouse activity type, while the same exception setup is visible in a different activity context. The project manager wants the smallest corrective action because the transport window is closed and a reimport would require new approvals. The consultant must identify the missing dependency in the current target environment rather than restart the transport cycle.

Which action should the consultant perform first?

Response:

- A. reverse the latest customizing import and return the warehouse to the earlier stable behavior before further analysis.
- B. verify whether the exception configuration is correctly assigned to the specific warehouse activity context where it is missing.
- C. open the change window and reimport the full transport so all exception settings are refreshed together.
- D. create a separate warehouse activity type for testing so the exception can be validated outside the existing flow.

Answer: B

Explanation:

Feedback:

The import succeeded and the exception is visible in one activity context, which means the transported content exists in the environment. The selective absence in another context indicates a missing assignment or binding for the specific warehouse activity, not a failed transport. The most targeted next step is to validate context-specific assignment.

NEW QUESTION # 71

CHALLENGE 4; Controlled Resource Evidence for Cold-Chain Movement A staging user completed a quarantine movement using expanded resource coverage. The same movement later could not be completed by the normal quarantine movement group during a controlled test.

What is the strongest diagnosis?

Response:

- A. The hospital release sequence should be disabled because it created excessive queue pressure.
- B. The resource responsibility and task assignment dependency is not proven for normal execution.
- C. The physical warehouse layout is invalid because quarantine products cannot move through mobile execution.
- D. The on-premise warehouse should remain the only location for returned pharmaceutical products.

Answer: B

Explanation:

Feedback:

The difference between expanded coverage and normal group execution points to a resource responsibility and task assignment dependency. The issue is not movement completion alone, but whether intended roles can execute the assigned task.

NEW QUESTION # 72

CHALLENGE 4; Controlled Resource Evidence for High- Value Spare Movement Local operations wants broad resource coverage retained during cutover readiness because production downtime is visible when urgent spares wait. Compliance wants evidence that controlled movements are executed by assigned groups.

Which prioritization is most appropriate?

Response:

- A. Treat task confirmations as sufficient because completed movements prove warehouse execution.
- B. Remove controlled spare movements from the cutover cycle because they require stricter handling evidence.
- C. Keep broad coverage because production pressure should override resource traceability during cutover readiness.
- **D. Require resource-aligned execution evidence while retaining exception handling only through governed approval.**

Answer: D

Explanation:

Feedback:

This weighs production pressure against defensible execution evidence without treating either as absolute. Resource-aligned evidence should support normal readiness, while exceptions need governed approval rather than becoming default behavior.

NEW QUESTION # 73

.....

Prep4SureReview offers SAP C_S4EWM_2601 exam dumps that every candidate can rely on to get success on the first take. The registration fee for the C_S4EWM_2601 real certification test is considerably expensive. That is why a Prep4SureReview has launched a budget-friendly SAP C_S4EWM_2601 updated study material compared to other brands in the market. We also save you money with up to 1 year of free SAP C_S4EWM_2601 Exam Questions updates. For customer satisfaction, a free demo version of the SAP Certified - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management (C_S4EWM_2601) exam product is also available so that users may check its authenticity before even buying it. Don't miss this opportunity of buying an updated and affordable SAP Certified - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management (C_S4EWM_2601) exam product.
