[https://docs.servicenow.com/bundle/tokyo-platform-administration/page/administer/table-administration/concept/c\\_TableAdministration.html](https://docs.servicenow.com/bundle/tokyo-platform-administration/page/administer/table-administration/concept/c_TableAdministration.html)

### NEW QUESTION # 98

Which of the following statements must evaluate to true for a user to pass an Access Control?

Choose 3 answers

- **A. Scripts configured in the Access Control must evaluate to true.**
- B. The user must be granted access through a business rule.
- **C. The user has one of the roles specified in the Required roles related list.**
- **D. Conditions configured in the Access Control must evaluate to true.**
- E. Other matching Access Controls for the records evaluate to true.

**Answer: A,C,D**

Explanation:

The statements that must evaluate to true for a user to pass an Access Control are:

Conditions configured in the Access Control must evaluate to true.

The user has one of the roles specified in the Required roles related list.

Scripts configured in the Access Control must evaluate to true.

An Access Control is a rule that determines whether a user can access a particular object or operation in ServiceNow. An Access Control consists of three elements: Conditions, Roles, and Script. Each element specifies a requirement that the user must meet to
