## Latest ECCouncil 212-82 Test Practice, Valid Exam 212-82 Vce Free

It is understandable that different people have different preference in terms of 212-82 study guide. Taking this into consideration, and in order to cater to the different requirements of people from different countries in the international market, we have prepared three kinds of versions of our 212-82 Preparation questions in this website, namely, PDF version, APP online and software version, and you can choose any one of them as you like. You will our 212-82 exam dumps are the best!

The Certified Cybersecurity Technician certification is suitable for individuals who want to establish themselves as cybersecurity professionals and are interested in advancing their careers. It is designed for individuals who have a solid foundation in cybersecurity technology and are looking to enhance their skills and knowledge in the field. 212-82 exam is also an ideal choice for individuals who are looking to transition into a career in cybersecurity.

ECCouncil 212-82 Certification Exam, also known as the Certified Cybersecurity Technician (CCT) exam, is designed to test the skills and knowledge of individuals seeking to become cybersecurity technicians. 212-82 exam covers a wide range of topics, including network security, threat analysis, incident response, and vulnerability assessment. It is an entry-level certification that provides a foundation for individuals who are interested in pursuing a career in cybersecurity.

## ECCouncil Certified Cybersecurity Technician Sample Questions (Q65-Q70):

### NEW QUESTION # 65

Which of the following are examples of physical security controls?

- A. Encryption algorithms
- B. Firewalls

- C. Security guards
- D. Biometric access control

**Answer: C,D**

#### **NEW QUESTION # 66**

Miguel, a professional hacker, targeted an organization to gain illegitimate access to its critical information. He identified a flaw in the end-point communication that can disclose the target application's data.

Which of the following secure application design principles was not met by the application in the above scenario?

- A. Secure the weakest link
- B. Do not trust user input
- C. Exception handling
- D. Fault tolerance

**Answer: C**

#### **NEW QUESTION # 67**

Maisie, a new employee at an organization, was given an access badge with access to only the first and third floors of the organizational premises. Maisie tried scanning her access badge against the badge reader at the second-floor entrance but was unsuccessful. Identify the short-range wireless communication technology used by the organization in this scenario.

- A. Bluetooth
- B. Li-Fi
- C. RFID
- D. WiFi

**Answer: C**

Explanation:

RFID (Radio Frequency Identification) is a short-range wireless communication technology that uses radio waves to identify and track objects. RFID tags are attached to objects and RFID readers scan the tags to obtain the information stored in them. RFID is commonly used for access control, inventory management, and identification. Reference: What is RFID?

#### **NEW QUESTION # 68**

George, a security professional at an MNC, implemented an Internet access policy that allowed employees working from a remote location to access any site, download any application, and access any computer or network without any restrictions. Identify the type of Internet access policy implemented by George in this scenario.

- A. Prudent policy
- B. Permissive policy
- C. Promiscuous policy
- D. Paranoid policy

**Answer: B**

Explanation:

Permissive policy is the type of Internet access policy implemented by George in this scenario.

An Internet access policy is a policy that defines the rules and guidelines for accessing the Internet from a system or network. An Internet access policy can be based on various factors, such as security, productivity, bandwidth, etc. An Internet access policy can have different types based on its level of restriction or control. A permissive policy is a type of Internet access policy that allows users to access any site, download any application, and access any computer or network without any restrictions. A permissive policy can be used to provide maximum flexibility and freedom to users, but it can also pose significant security risks and challenges. In the scenario, George implemented an Internet access policy that allowed employees working from a remote location to access any site, download any application, and access any computer or network without any restrictions. This means that he implemented a permissive policy for those employees. A paranoid policy is a type of Internet access policy that blocks or denies all Internet access by default and only allows specific sites, applications, or computers that are explicitly authorized. A prudent policy is a type of Internet access policy that allows most Internet access but blocks or restricts some sites, applications, or computers that are deemed

inappropriate, malicious, or unnecessary. A promiscuous policy is not a type of Internet access policy, but a term that describes a network mode that allows a network interface card (NIC) to capture all packets on a network segment, regardless of their destination address.

### NEW QUESTION # 69

An MNC hired Brandon, a network defender, to establish secured VPN communication between the company's remote offices. For this purpose, Brandon employed a VPN topology where all the remote offices communicate with the corporate office but communication between the remote offices is denied.

Identify the VPN topology employed by Brandon in the above scenario.

- A. Hub-and-Spoke VPN topology
- B. Point-to-Point VPN topology
- C. Star topology
- D. Full-mesh VPN topology

**Answer: A**

Explanation:

A hub-and-spoke VPN topology is a type of VPN topology where all the remote offices communicate with the corporate office, but communication between the remote offices is denied. The corporate office acts as the hub, and the remote offices act as the spokes. This topology reduces the number of VPN tunnels required and simplifies the management of VPN policies. A point-to-point VPN topology is a type of VPN topology where two endpoints establish a direct VPN connection. A star topology is a type of VPN topology where one endpoint acts as the central node and connects to multiple other endpoints. A full-mesh VPN topology is a type of VPN topology where every endpoint connects to every other endpoint.

### NEW QUESTION # 70
