Three Convenient Formats for Juniper JN0-336 Practice Test Questions

At least 2/3 top 500 global companies choose Juniper electronic business software products as their key products or daily use. So if you get a Juniper certification you will be outstanding over others. Candidates want to pass JN0-336 exam, the fastest and convenient method is to use our JN0-336 Study Guide, many candidates choose this method to pass exam. You also can make this as practice exam materials or use test engine file to test like the real test scene.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q74-Q79):

NEW QUESTION # 74

A client has attempted communication with a known command-and-control server and it has reached the configured threat level threshold.

Which feed will the clients IP address be automatically added to in this situation?

- A. the command-and-control cloud feed
- B. the allowlist and blocklist feed
- C. the custom cloud feed

- D. the infected host cloud feed

Answer: D

Explanation:

Infected hosts are internal hosts that have been compromised by malware and are communicating with external C&C servers³. Juniper ATP Cloud provides infected host feeds that list internal IP addresses or subnets of infected hosts along with a threat level³. Once the Juniper ATP Cloud global threshold for an infected host is met, that host is added to the infected host feed and assigned a threat level of 10 by the cloud⁴. You can also configure your SRX Series device to block traffic from these IP addresses using security policies⁴.

NEW QUESTION # 75

Click the Exhibit button.

You are validating the configuration template for device access. The commands in the exhibit have been entered to secure IP access to an SRX Series device.

Referring to the exhibit, which two statements are true? (Choose two.)

- A. The loopback interface blocks invalid traffic on its exit from the device.
- B. The device manager can access the device from 10.253.1.2.
- C. The loopback interface blocks invalid traffic on its entry into the device.
- D. The device manager can access the device from 192.168.11.248.

Answer: B,C

Explanation:

The commands in the exhibit show how to configure a firewall filter on the loopback interface (lo0) of an SRX Series device. The loopback interface is a gateway for all the control traffic that enters the Routing Engine of the device. The firewall filter can be used to monitor and protect this control traffic from various attacks. Two statements that are true based on the exhibit are:

The loopback interface blocks invalid traffic on its entry into the device: The firewall filter applied on lo0 has a term that matches any packet with an invalid source address (such as 0.0.0.0/8 or 127.0.0.0/8) and discards it. This prevents spoofing or DoS attacks using invalid source addresses. The device manager can access the device from 10.253.1.2: The firewall filter applied on lo0 has a term that matches any packet with a source address of 10.253.1.2 and accepts it. This allows the device manager to access the device from this IP address using protocols such as SSH, Telnet, HTTP, or HTTPS.

NEW QUESTION # 76

Regarding static attack object groups, which two statements are true? (Choose two.)

- A. Group membership automatically changes when Juniper updates the IPS signature database.
- B. Matching attack objects are automatically added to a custom group.
- C. Group membership does not automatically change when Juniper updates the IPS signature database.
- D. You must manually add matching attack objects to a custom group.

Answer: C,D

NEW QUESTION # 77

Which two statements are correct about JSA data collection? (Choose two.)

- A. The Event Collector parses logs
- B. The Flow Collector parses logs.
- C. The Flow Collector can use statistical sampling
- D. The Event Collector collects information using BGP FlowSpec.

Answer: A,C

Explanation:

The Flow Collector can use statistical sampling to collect and store network flow data in the JSA database. The Event Collector

collects information from various sources including syslog, SNMP, NetFlow, and BGP FlowSpec. Both the Flow Collector and the Event Collector parse logs to extract useful information from the logs.

NEW QUESTION # 78

Which two statements are correct about chassis clustering? (Choose two.)

- A. The node ID value ranges from 1 to 255.
- **B. The node ID is used to identify each device in the chassis cluster.**
- **C. A system reboot is required to activate changes to the cluster.**
- D. The cluster ID is used to identify each device in the chassis cluster.

Answer: B,C

Explanation:

In chassis clustering, the node ID is indeed used to uniquely identify each device within the cluster. This allows for individual addressing and management of devices within the cluster configuration, which is crucial for operations and maintenance. Typically, activating changes that involve chassis clustering configuration, such as setting or changing the node ID or forming a new cluster, requires a reboot of the devices. This ensures that all configuration changes are properly applied and that the devices can synchronize their states as part of the cluster.

NEW QUESTION # 79

.....

If you fail, don't forget to learn your lesson. If you still prepare for your test yourself and fail again and again, it is time for you to choose a valid JN0-336 study guide; this will be your best method for clearing exam and obtain a certification. Good JN0-336 study guide will be a shortcut for you to well-directed prepare and practice efficiently, you will avoid do much useless efforts and do something interesting. Pass4SureQuiz releases 100% pass-rate JN0-336 Study Guide files which guarantee candidates 100% pass exam in the first attempt.
