NEW QUESTION # 95

The Integrated Replicat reads the trail, constructs logical change records that represent source DML or DDL transactions, and transmits these records to an inbound server in the Oracle target database. What statement is true about Integrated Replicat?

- A. Integrated Replicat does not need a checkpoint or a trace table for its operations.
- B. Trail files contain data that must be in logical change records format.

- C. Source must be configured as Integrated Extract.
- D. Both source and target can be Oracle and non-Oracle databases.

Answer: B

Explanation:

Integrated Replicat processes Logical Change Records (LCRs). These LCRs are read from trail files and passed to the Inbound Server. It supports parallel apply and uses Oracle Streams APIs internally.

NEW QUESTION # 96

What is a trusted point in a GoldenGate deployment?

- A. The one root certificate authority (rootCA) that is used for signing all certificates across all deployments
- B. Security keys to provide secure online authentication
- C. An access point that you can trust to be a safe connection
- D. A high level of security and protection system that is designed against various types of threats, including malware, hacking, and attacks

In Oracle GoldenGate (especially in Microservices Architecture), the trusted point refers to the root certificate authority (rootCA) used to digitally sign all the certificates for secure communication. This ensures trust between all components within a deployment.

NEW QUESTION # 97

Which is an incorrect option to use with the DBOPTIONS parameter for a Replicat?

- A. NOCATALOGCONNECT
- B. USEREPLICATIONUSER
- C. USEODBC
- D. BATCHSQL

NEW QUESTION # 98

How is Integrated Capture different from Classic Capture?

- A. Integrated Capture is different because it connects directly to the inbound server to apply transactions.
- B. Integrated Capture is different because it automatically configures the Capture process of GoldenGate.

- D. Integrated Capture is different because it receives Logical Change Records (LCRs) directly from a database logmining server.
