NEW QUESTION # 54

03. Debugging SELinux

A web server running on non-standard port 82 encounters issues while serving content. Debug and resolve the problem to meet the following conditions:

- The web server on the system can serve HTML files hosted in /var/www/html (Note: Do not delete or modify existing file contents)

- The web server can serve content on port 82
- The web server can start automatically at system boot

Answer:

Explanation:

Solution:

```
# Check which package provides the semanage command
[root@node1 ~]# yum provides "*/semanage"
# Install the semanage command
[root@node1 ~]# yum -y install policycoreutils-python-utils
[root@node1 ~]# semanage port -l |grep http
[root@node1 ~]# semanage port -a -t http_port_t -p tcp 82
# Alternatively, you can use man semanage port, then search for EXAMPLE.
[root@node1 ~]# systemctl restart httpd
[root@node1 ~]# systemctl enable httpd
# Verification, seeing the source code indicates correctness (mandatory operation)
[root@node1 ~]# curl http://node1.domain250.example.com:82
```

NEW QUESTION # 55

Configure passwordless sudo access for members of the ops group to run only /usr/bin/systemctl restart httpd.

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

```
groupadd ops
visudo -f /etc/sudoers.d/ops-restart-httpd
Add this line to the file:
%ops ALL=(ALL) NOPASSWD: /usr/bin/systemctl restart httpd
```

Set correct permissions:

```
chmod 440 /etc/sudoers.d/ops-restart-httpd
visudo -cf /etc/sudoers.d/ops-restart-httpd
```

Detailed Explanation:

- * Using /etc/sudoers.d/ is the standard safe approach.
- * visudo validates syntax and helps prevent syntax errors.
- * %ops applies the rule to the whole group.
- * Restricting the exact command is better than granting broad sudo access. Red Hat's RHEL 10 security hardening guide documents sudo configuration through sudoers. (Red Hat Documentation)
