## Exam ECCouncil 212-82 Overviews | Valid 212-82 Exam Cram

Do you want to pass 212-82 exam in one time? ValidExam exists for the purpose of fulfilling your will, and it will be your best choice because it can meet your needs. After you buy our 212-82 Dumps, we promise you that we will offer free update service in one year. If you fail the exam, we also promise full refund.

ECCouncil 212-82 exam covers a wide range of topics related to cybersecurity, including network security, cryptography, access control, security operations, and incident response. 212-82 exam is designed to test the candidate's knowledge and skills in each of these areas. 212-82 Exam consists of 100 multiple-choice questions, and the candidate has two hours to complete the exam.

## ECCouncil Certified Cybersecurity Technician Sample Questions (Q99-Q104):

### NEW QUESTION # 99

Tenda, a network specialist at an organization, was examining logged data using Windows Event Viewer to identify attempted or successful unauthorized activities. The logs analyzed by Tenda include events related to Windows security; specifically, log-on/log-off activities, resource access, and also information based on Windows system's audit policies. Identify the type of event logs analyzed by Tenda in the above scenario.

- A. Setup event log
- **B. Security event log**
- C. System event log
- D. Application event log

**Answer: B**

Explanation:

Security event log is the type of event log analyzed by Tenda in the above scenario. Windows Event Viewer is a tool that displays logged data about various events that occur on a Windows system or network. Windows Event Viewer categorizes event logs into different types based on their source and purpose. Security event log is the type of event log that records events related to Windows security; specifically, log-on/log-off activities, resource access, and also information based on Windows system's audit policies. Security event log can help identify attempted or successful unauthorized activities on a Windows system or network.

Application event log is the type of event log that records events related to applications running on a Windows system, such as errors, warnings, or information messages. Setup event log is the type of event log that records events related to the installation or removal of software or hardware components on a Windows system. System event log is the type of event log that records events related to the operation of a Windows system or its components, such as drivers, services, processes, etc.

### NEW QUESTION # 100

Bob was recently hired by a medical company after it experienced a major cyber security breach. Many patients are complaining that their personal medical records are fully exposed on the Internet and someone can find them with a simple Google search. Bob's boss is very worried because of regulations that protect those data. Which of the following regulations is mostly violated?

- A. ISO 2002
- **B. HIPPA/PHI**
- C. PII
- D. PCIDSS

**Answer: B**

Explanation:

HIPPA/PHI is the regulation that is mostly violated in the above scenario. HIPPA (Health Insurance Portability and Accountability Act) is a US federal law that sets standards for protecting the privacy and security of health information. PHI (Protected Health Information) is any information that relates to the health or health care of an individual and that can identify the individual, such as name, address, medical records, etc.

HIPPA/PHI requires covered entities, such as health care providers, health plans, or health care clearinghouses, and their business associates, to safeguard PHI from unauthorized access, use, or disclosure .

In the scenario, the medical company experienced a major cyber security breach that exposed the personal medical records of many patients on the internet, which violates HIPPA/PHI regulations. PII (Personally Identifiable Information) is any information that can be used to identify a specific individual, such as name, address, social security number, etc. PII is not specific to health information and can be regulated by various laws, such as GDPR (General Data Protection Regulation), CCPA (California Consumer Privacy Act), etc.

PCI DSS (Payment Card Industry Data Security Standard) is a set of standards that applies to entities that store, process, or transmit payment card information, such as merchants, service providers, or payment processors.

PCI DSS requires them to protect cardholder data from unauthorized access, use, or disclosure. ISO 2002 (International Organization for Standardization 2002) is not a regulation, but a standard for information security management systems that provides guidelines and best practices for organizations to manage their information security risks.

### NEW QUESTION # 101

Initiate an SSH Connection to a machine that has SSH enabled in the network. After connecting to the machine find the file flag.txt and choose the content hidden in the file. Credentials for SSH login are provided below:

Hint:

Username: sam

Password: admin@l23

- A. sam2@bob
- B. bob2@sam
- C. sam@bob
- **D. bob@sam**

**Answer: D**

Explanation:

Quid pro quo is the social engineering technique that Johnson employed in the above scenario. Social engineering is a technique that involves manipulating or deceiving people into performing actions or revealing information that can be used for malicious purposes. Social engineering can be performed through various methods, such as phone calls, emails, websites, etc. Quid pro quo is a social engineering method that involves offering a service or a benefit in exchange for information or access. Quid pro quo can be used to trick victims into believing that they are receiving help or assistance from a legitimate source, while in fact they are compromising their security or privacy. In the scenario, Johnson performed quid pro quo by claiming himself to represent a technical support team from a vendor and offering to help sibertech.org with a server issue, while in fact he prompted the victim to execute unusual commands and install malicious files, which were then used to collect and pass critical information to Johnson's machine. Diversion theft is a social engineering method that involves diverting the delivery or shipment of goods or assets to a different location or destination. Elicitation is a social engineering method that involves extracting information from a target by engaging them in a conversation or an interaction. Phishing is a social engineering method that involves sending fraudulent emails or messages that appear to come from a trusted source, such as a bank, a company, or a person, and asking the recipient to click on a link, open an attachment, or provide personal or financial information.

### NEW QUESTION # 102

NexaCorp. an enterprise with a robust Linux infrastructure, has been facing consistent downtimes without any apparent reasons. The company's initial investigation suggests possible unauthorized system-level changes. NexaCorp's IT team realizes that It needs to monitor and analyze system logs more efficiently to pinpoint the cause. What would be the optimal approach for NexaCorp to monitor and analyze its Linux system logs to detect and prevent unauthorized changes?

- A. Set up an automated script to send alerts if the last' command shows unexpected users.
- B. Only focus on monitoring SSH logs since most changes likely come through remote access.
- **C. Implement a SIEM system that centralizes, correlates, and analyzes logs in real-time.**
- D. Monitor and analyze the /var/log/syslog file daily for any unusual activities.

**Answer: C**

### NEW QUESTION # 103

Ryleigh, a system administrator, was instructed to perform a full back up of organizational data on a regular basis. For this purpose, she used a backup technique on a fixed date when the employees are not accessing the system i.e., when a service-level down time is allowed a full backup is taken. Identify the backup technique utilized by Ryleigh in the above scenario.

- A. Hot backup
- B. Warm backup
- C. Nearline backup
- **D. Cold backup**

**Answer: D**

Explanation:

Cold backup is the backup technique utilized by Ryleigh in the above scenario. Cold backup is a backup technique that involves taking a full backup of data when the system or database is offline or shut down. Cold backup ensures that the data is consistent and not corrupted by any ongoing transactions or operations. Cold backup is usually performed on a fixed date or time when the service-level downtime is allowed or scheduled. Nearline backup is a backup technique that involves storing data on a medium that is not immediately accessible, but can be retrieved within a short time. Hot backup is a backup technique that involves taking a backup of data while the system or database is online or running. Warm backup is a backup technique that involves taking a backup of data while the system or database is partially online or running.
