## SAP C-TADM-23 Practice Test [2026]

We can provide you with efficient online services during the whole day, no matter what kind of problems or consultants about our C-TADM-23 quiz torrent; we will spare no effort to help you overcome them sooner or later. First of all, we have professional staff with dedication to check and update our C-TADM-23 exam torrent materials on a daily basis, so that you can get the latest information from our C-TADM-23 Exam Torrent at any time. Besides our after-sales service engineers will be always online to give remote guidance and assistance for you if necessary. If you make a payment for our C-TADM-23 test prep, you will get our study materials in 5-10 minutes and enjoy the pleasure of your materials.

## SAP C-TADM-23 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• Installing and Updating of SAP Systems: In this section of the exam, topics covered include the installation process of an SAP S</li> <li>• 4HANA Server and SAP Solution Manager. It also covers how to complete the post-installation activities in addition to updating those recently installed SAP systems.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• SAP System Concepts: This section of the exam covers how to describe SAP products, architecture, and technologies.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Database Administration SAP HANA: In this section of the exam, topics covered include how to describe the architecture of an SAP system that utilizes the SAP HANA as a database. In this section, it is assessed what are the prerequisites for an SAP HANA database installation. Besides, the section covers how to monitor the SAP HANA database using the SAP HANA Cockpit.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• System Administration (AS ABAP; AS Java Basics; User Management Basics): In this section of the exam, topics covered include setting up an AS ABAP-based SAP system. It also covers how to set up batch processing, RFC, printers, and maintain user master data. Manage spools and schedule background jobs. Also, it covers topics such as initial overseeing of an AS Java-based SAP system and how to explain the user and authorization concepts for an AS ABAP-centric SAP system.</li> </ul>

## SAP Certified Technology Consultant - SAP S/4HANA System Administration Sample Questions (Q22-Q27):

### NEW QUESTION # 22

Your SAP S/4HANA Server system consists of an ABAP Central Services instance, a Primary Application Server instance, and two Additional Application Server instances.

How many system profile files are evaluated for this SAP system during a complete system start?

- A. 0
- B. 1
- **C. 2**
- D. 3

**Answer: C**

Explanation:

For an SAP S/4HANA Server system consisting of an ABAP Central Services (ASCS) instance, a Primary Application Server (PAS) instance, and two Additional Application Server (AAS) instances, a total of 5 system profile files are evaluated during a complete system start. This includes the START profile for each of the 4 instances (1 ASCS, 1 PAS, and 2 AAS) and 1 DEFAULT or INSTANCE profile that is shared across the system. Each instance reads its own START profile, while the DEFAULT or INSTANCE profile contains parameters that apply to the entire system.

### NEW QUESTION # 23

What actions can you perform using the SAP\_FIORI\_FOUNDATION\_S4 task list? Note: There are 3 correct answers to this question.

- **A. Generate SAP Fiori foundation roles.**
- B. Create users with generated business roles.
- **C. Replicate backend catalogs.**
- D. Schedule a job for calculation of SAPUI5 application index.
- **E. Enable SAP GUI for HTML.**

**Answer: A,C,E**

### NEW QUESTION # 24

You want to create an ABAP task list in a development system to transport it to the production system. What must you do?

Note: There are 2 correct answers to this question.

- A. Activate the task list.
- B. Assign the task list to a package
- C. Assign the task list to a customizing transport request.
- D. Assign the task list to a workbench transport request.

**Answer: A,B**

Explanation:

An ABAP task list is a sequence of ABAP tasks that can be executed automatically or manually in an SAP system. An ABAP task can be a function module, a method, or a report that performs a specific action. To create an ABAP task list in a development system and transport it to the production system, you need to do the following:

Assign the task list to a package. A package is a container for development objects that belong to the same application or software component. By assigning the task list to a package, you enable the transport of the task list along with its dependent objects to other systems.

Activate the task list. Activation is the process of generating the executable code and metadata of the task list and storing them in the database. Only activated task lists can be executed or transported to other systems. You do not need to assign the task list to a customizing or a workbench transport request, as these are different types of transport requests that are used for different purposes. A customizing transport request is used to transport configuration changes that are made in the Customizing IMG. A workbench transport request is used to transport development objects that are created or changed in the ABAP Workbench. A task list is neither a configuration change nor a development object, but a sequence of ABAP tasks that can be executed in any system.

#### NEW QUESTION # 25

You want to set up a printer locally on a Microsoft Windows-based AS ABAP. Which host spool access method must you use?

- A. L
- B. G
- C. C
- D. U

**Answer: C**

#### NEW QUESTION # 26

Which file system locations do you need to specify when installing the SAP HANA multi-host database system using the default settings? Note: There are 2 correct answers to this question

- A. /hana/shared
- B. /usr/sap/<SID>
- C. /usr/sap/hostctrl
- D. /hana/log/<SID>

**Answer: A,D**

Explanation:

When installing an SAP HANA multi-host database system using default settings, it is necessary to specify certain file system locations to ensure proper configuration and operation of the system. These include the location for log files, typically under /hana/log/<SID> (A), where <SID> is the System ID of the SAP HANA instance. This path is used to store log files that are crucial for database recovery and auditing. Another important file system location is /hana/shared (D), which is used to store shared data that can be accessed by all hosts in a multi-host SAP HANA system, such as binary files and shared configuration data. The locations

/usr/sap/hostctrl (B) and /usr/sap/<SID> (C) are significant for SAP system installations but are not specifically required for the SAP HANA database system installation using default settings.

#### NEW QUESTION # 27

.....

Selecting the right method will save your time and money. If you are preparing for C-TADM-23 exam with worries, maybe the professional exam software provided by IT experts from Itcerttest will be your best choice. Our Itcerttest aims at helping you successfully Pass C-TADM-23 Exam. If you are unlucky to fail C-TADM-23 exam, we will give you a full refund of the cost you purchased our dump to make up part of your loss. Please trust us, and wish you good luck to pass C-TADM-23 exam.
