

# Test Amazon AWS-Solutions-Architect-Professional Questions Answers & AWS-Solutions-Architect-Professional Practice Exams

## AWS Certified Solutions Architect test-with 100% verified answers-2022-2023

1. A Solutions Architect is developing a document sharing application and needs a storage layer. The storage should provide automatic support for versioning so that users can easily roll back to a previous version or recover a deleted account. Which AWS service will meet the above requirements?
  - a. Amazon S3
  - b. Amazon EBS
  - c. Amazon EFS
  - d. Storage Gateway VTL
2. You have an application running in us-west-2 requiring 6 EC2 Instances running at all times. With 3 Availability Zones in the region viz. us-west-2a, us-west-2b, and us-west-2c, which of the following deployments provides fault tolerance if an Availability Zone in us-west-2 becomes unavailable?  
Choose 2 answers from the options given below.
  - a. 2 EC2 Instances in us-west-2a, 2 EC2 Instances in us-west-2b, and 2 EC2 Instances in us-west-2c
  - b. 3 EC2 Instances in us-west-2a, 3 EC2 Instances in us-west-2b, and no EC2 Instances in us-west-2c
  - c. 4 EC2 Instances in us-west-2a, 2 EC2 Instances in us-west-2b, and 2 EC2 Instances in us-west-2c
  - d. 6 EC2 Instances in us-west-2a, 6 EC2 Instances in us-west-2b, and no EC2 Instances in us-west-2c
  - e. 3 EC2 Instances in us-west-2a, 3 EC2 Instances in us-west-2b, and 3 EC2 Instances in us-west-2c
3. An application allows a manufacturing site to upload files. Each uploaded 3 GB file is processed to extract metadata, and this process takes a few seconds per file. The frequency at which the uploads happen is unpredictable. For instance, there may be no updates for hours, followed by several files being uploaded concurrently. What architecture addresses this workload in the most cost efficient manner?
  - a. A. Use a Kinesis Data Delivery Stream to store the file. Use Lambda for processing.
  - b. B. Use an SQS queue to store the file, to be accessed by a fleet of EC2 Instances.
  - c. C. Store the file in an EBS volume, which can then be accessed by another EC2 Instance for processing.
  - d. D. Store the file in an S3 bucket. Use Amazon S3 event notification to invoke a Lambda function for file processing.
4. A company is migrating an on-premise 10TB MySQL database to AWS. With a business requirement that the replica lag be under 100 milliseconds, the company expects this database to quadruple in size. Which Amazon RDS engine meets the above requirements?
  - a. A. MySQL
  - b. B. Microsoft SQL Server
  - c. C. Oracle
  - d. D. Amazon Aurora
5. For which of the following workloads should a Solutions Architect consider using Elastic Beanstalk? Choose 2 answers from the options given below.
  - a. A. A Web application using Amazon RDS
  - b. B. An Enterprise Data Warehouse
  - c. C. A long running worker process

The pressure is not terrible, and what is terrible is that you choose to evade it. You clearly have seen your own shortcomings, and you know that you really should change. Then, be determined to act! Buying our AWS-Solutions-Architect-Professional exam questions is the first step you need to take. And as long as you study with our AWS-Solutions-Architect-Professional Practice Guide, you will find that the exam is just a piece of cake and the certification is easy to get. With the certification, you will find your future is much brighter.

We talked with a lot of users about AWS-Solutions-Architect-Professional practice engine, so we are very clear what you want. You know that the users of AWS-Solutions-Architect-Professional training materials come from all over the world. The quality of our products is of course in line with the standards of various countries. You will find that the update of AWS-Solutions-Architect-Professional learning quiz is very fast. You don't have to buy all sorts of information in order to learn more. AWS-Solutions-Architect-Professional training materials can meet all your needs. What are you waiting for?

**Hot Test AWS-Solutions-Architect-Professional Questions Answers & Pass for Sure AWS-Solutions-Architect-Professional Practice Exams: AWS**

## Certified Solutions Architect - Professional

To help you get to know the exam questions and knowledge of the AWS-Solutions-Architect-Professional practice exam successfully and smoothly, our experts just pick up the necessary and essential content in to our AWS-Solutions-Architect-Professional test guide with unequivocal content rather than trivia knowledge that exam do not test at all. To make you understand the content more efficient, our experts add charts, diagrams and examples in to AWS-Solutions-Architect-Professional Exam Questions to speed up you pace of gaining success. So these AWS-Solutions-Architect-Professional latest dumps will be a turning point in your life. And on your way to success, they can offer titanic help to make your review more relaxing and effective. Moreover, the passing certificate and all benefits coming along are not surreal dreams anymore.

### Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q21-Q26):

#### NEW QUESTION # 21

ABC has created a multi-tenant Learning Management System (LMS). The application is hosted for five different tenants (clients) in the VPCs of the respective AWS accounts of the tenant. ABC wants to setup a centralized server which can connect with the LMS of each tenant upgrade if required. ABC also wants to ensure that one tenant VPC should not be able to connect to the other tenant VPC for security reasons.

How can ABC setup this scenario?

- A. ABC has to setup one centralized VPC which will peer in to all the other VPCs of the tenants.
- B. ABC should setup all the VPCs meshed together with VPC peering for all VPCs.
- C. ABC should setup all the VPCs with the same CIDR but have a centralized VPC. This way only the centralized VPC can talk to the other VPCs using VPC peering.
- D. ABC should setup VPC peering with all the VPCs peering each other but block the IPs from CIDR of the tenant VPCs to deny them.

**Answer: A**

Explanation:

Explanation

A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. It enables the user to launch AWS resources into a virtual network that the user has defined. A VPC peering connection allows the user to route traffic between the peer VPCs using private IP addresses as if they are a part of the same network.

This is helpful when one VPC from the same or different AWS account wants to connect with resources of the other VPC. The organization wants to setup that one VPC can connect with all the other VPCs but all other VPCs cannot connect among each other. This can be achieved by configuring VPC peering where one VPC is peered with all the other VPCs, but the other VPCs are not peered to each other. The VPCs are in the same or a separate AWS account and should not have overlapping CIDR blocks. <http://docs.aws.amazon.com/AmazonVPC/latest/PeeringGuide/peering-configurations-full-access.html#many-vp>

#### NEW QUESTION # 22

A company manufactures smart vehicles. The company uses a custom application to collect vehicle data. The vehicles use the MQTT protocol to connect to the application.

The company processes the data in 5-minute intervals. The company then copies vehicle telematics data to on-premises storage. Custom applications analyze this data to detect anomalies.

The number of vehicles that send data grows constantly. Newer vehicles generate high volumes of data. The on-premises storage solution is not able to scale for peak traffic, which results in data loss. The company must modernize the solution and migrate the solution to AWS to resolve the scaling challenges.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Use Amazon MQ for RabbitMQ to collect the vehicle data. Send the data to an Amazon Kinesis Data Firehose delivery stream to store the data in Amazon S3. Use Amazon Lookout for Metrics to detect anomalies.
- B. Use AWS IOT Greengrass to send the vehicle data to Amazon Managed Streaming for Apache Kafka (Amazon MSK). Create an Apache Kafka application to store the data in Amazon S3. Use a pretrained model in Amazon SageMaker to detect anomalies.
- C. Use AWS IOT Core to receive the vehicle data. Configure rules to route data to an Amazon Kinesis Data Firehose delivery stream that stores the data in Amazon S3. Create an Amazon Kinesis Data Analytics application that reads from the delivery stream to detect anomalies.
- D. Use AWS IOT FleetWise to collect the vehicle data. Send the data to an Amazon Kinesis data stream.

Use an Amazon Kinesis Data Firehose delivery stream to store the data in Amazon S3. Use the built-in machine learning transforms in AWS Glue to detect anomalies.

**Answer: C**

Explanation:

Explanation

Using AWS IoT Core to receive the vehicle data will enable connecting the smart vehicles to the cloud using the MQTT protocol<sup>1</sup>. AWS IoT Core is a platform that enables you to connect devices to AWS Services and other devices, secure data and interactions, process and act upon device data, and enable applications to interact with devices even when they are offline<sup>2</sup>. Configuring rules to route data to an Amazon Kinesis Data Firehose delivery stream that stores the data in Amazon S3 will enable processing and storing the vehicle data in a scalable and reliable way<sup>3</sup>. Amazon Kinesis Data Firehose is a fully managed service that delivers real-time streaming data to destinations such as Amazon S3. Creating an Amazon Kinesis Data Analytics application that reads from the delivery stream to detect anomalies will enable analyzing the vehicle data using SQL queries or Apache Flink applications. Amazon Kinesis Data Analytics is a fully managed service that enables you to process and analyze streaming data using SQL or Java.

### NEW QUESTION # 23

A company is running an application in a single VPC on an Amazon EC2 instance with Amazon RDS as the datastore. The application does not support encryption in transit Security guidelines do not allow SSH access to any resource within the VPC. The Application has issues throughout the day which causes outages in the production environment. The issues are not present in nonproduction environments Application logs have been given to a vendor to troubleshoot the application. The vendor also requires IP packets for its analysis.

Which solution allows for the IP packets to be extracted for troubleshooting?

- A. Create a VPC traffic mirror source on the application instance's elastic network interface with a filter that captures all traffic Launch a new EC2 instance and configure the traffic mirror target to use the elastic network interface of the new EC2 instance. Start the traffic mirror session and download the packet capture from the new EC2 instance using AWS Systems Manager Provide the packet capture to the vendor.
- B. Enable VPC Flow Logs on the application instance's elastic network interface and send them to Amazon CloudWatch Logs Download the CloudWatch logs and provide them to me vendor
- C. Enable VPC Flow Logs on the VPC to capture traffic flows on from the application instance and the RDS instance and send them to Amazon CloudWatch Logs Download the CloudWatch logs and provide them to the vendor
- D. Create a VPC traffic mirror source on the application instance's elastic network interface with a filter that captures all traffic. Configure the traffic mirror target to use an Amazon S3 bucket Start the traffic mirror session and download the packet capture from Amazon S3. Provide the packet capture to the vendor.

**Answer: C**

### NEW QUESTION # 24

A company is running a workload that consists of thousands of Amazon EC2 instances. The workload is running in a VPC that contains several public subnets and private subnets. The public subnets have a route for 0.0.0.0/0 to an existing internet gateway. The private subnets have a route for 0.0.0.0/0 to an existing NAT gateway.

A solutions architect needs to migrate the entire fleet of EC2 instances to use IPv6. The EC2 instances that are in private subnets must not be accessible from the public internet.

What should the solutions architect do to meet these requirements?

- A. Update the existing VPC, and associate an Amazon-provided IPv6 CIDR block with the VPC and all subnets. Update the VPC route tables for all private subnets, and add a route for ::0 to the NAT gateway.
- B. Update the existing VPC, and associate a custom IPv6 CIDR block with the VPC and all subnets. Update all the VPC route tables, and add a route for ::0 to the internet gateway.
- C. Update the existing VPC, and associate a custom IPv6 CIDR block with the VPC and all subnets. Create a new NAT gateway, and enable IPv6 support. Update the VPC route tables for all private subnets, and add a route for ::0 to the IPv6-enabled NAT gateway.
- D. Update the existing VPC, and associate an Amazon-provided IPv6 CIDR block with the VPC and all subnets. Create an egress-only internet gateway. Update the VPC route tables for all private subnets, and add a route for ::0 to the egress-only internet gateway.

**Answer: D**

### NEW QUESTION # 25

A company has created an OU in AWS Organizations for each of its engineering teams. Each OU owns multiple AWS accounts. The organization has hundreds of AWS accounts. A solutions architect must design a solution so that each OU can view a breakdown of usage costs across its AWS accounts. Which solution meets these requirements?

- A. Create an AWS Cost and Usage Report (CUR) for each OU by using AWS Resource Access Manager. Allow each team to visualize the CUR through an Amazon QuickSight dashboard.
- B. Create an AWS Cost and Usage Report (CUR) in each AWS Organizations member account. Allow each team to visualize the CUR through an Amazon QuickSight dashboard.
- C. Create an AWS Cost and Usage Report (CUR) by using AWS Systems Manager. Allow each team to visualize the CUR through Systems Manager OpsCenter dashboards.
- **D. Create an AWS Cost and Usage Report (CUR) from the AWS Organizations management account. Allow each team to visualize the CUR through an Amazon QuickSight dashboard.**

**Answer: D**

Explanation:

Explanation

<https://docs.aws.amazon.com/cur/latest/userguide/billing-cur-limits.html>

### NEW QUESTION # 26

.....

If you want to use our AWS-Solutions-Architect-Professional simulating exam on your phone at any time, then APP version is your best choice as long as you have browsers on your phone. Of course, some candidates hope that they can experience the feeling of exam when they use the AWS-Solutions-Architect-Professional learning engine every day. Then our PC version of our AWS-Solutions-Architect-Professional Exam Questions can fully meet their needs only if their computers are equipped with windows system. As we face with phones and computers everyday, these two versions are really good.
