

2026 Efficient 100% Free JN0-253–100% Free Test Discount Voucher | JN0-253 Certification Practice

BONUS!!! Download part of ITEXamSimulator JN0-253 dumps for free: https://drive.google.com/open?id=1O_nJQqrgwngRT0Px5g1lkK0X8owzw7Ku

Our Juniper JN0-253 web-based practice exam software also simulates the Mist AI, Associate (JNCIA-MistAI) (JN0-253) environment. These Juniper JN0-253 mock exams are also customizable to change the settings so that you can practice according to your preparation needs. ITEXamSimulator web-based JN0-253 Practice Exam software is usable only with a good internet connection. You can use this Juniper JN0-253 version on any operating system, and this software is accessible through any browser like Opera, Safari, Chrome, Firefox, and IE.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.
Topic 2	<ul style="list-style-type: none">Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.
Topic 3	<ul style="list-style-type: none">Marvis Virtual Network Assistant AI: This domain introduces Marvis, an AI-powered assistant providing automated troubleshooting through intelligent actions, natural language queries, and specialized analytical tools for proactive issue resolution.

JN0-253 Certification Practice, JN0-253 Pass Test Guide

Can you imagine that just a mobile phone can let you do JN0-253 exam questions at any time? With our JN0-253 learning guide, you will find studying for the exam can be so easy and interesting. If you are a student, you can lose a heavy bag with JN0-253 Study Materials, and you can save more time for making friends, traveling, and broadening your horizons. Please believe that JN0-253 guide materials will be the best booster for you to learn.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q90-Q95):

NEW QUESTION # 90

What is the maximum number of nodes supported in a Mist Edge high availability cluster?

- A. unlimited nodes
- B. ten nodes
- C. two nodes
- D. three nodes

Answer: C

Explanation:

A Mist Edge high availability cluster supports a maximum of two nodes. This allows for redundancy and failover in case one of the nodes goes down.

NEW QUESTION # 91

Which two statements are correct about Juniper Mist Wired Assurance ZTP? (Choose two.)

- A. The technician must have console access to the switch during the initial setup.
- B. The switch must be running a supported Junos version for Juniper Mist Wired Assurance.
- C. All legacy Juniper switch models are supported.
- D. The cloud-ready Juniper switch must either boot from the factory-default state or you can issue the request system zeroize Junos command to reset the configuration.

Answer: B,D

Explanation:

Supported Junos Version: For Juniper Mist Wired Assurance to function correctly, the switch must be running a supported Junos version. This ensures compatibility with Mist's cloud management and AI capabilities.

Factory-Default State or Zeroize Command: The switch must boot from a factory-default state, or you can use the request system zeroize command to reset its configuration. This is essential for seamless onboarding and auto-provisioning.

NEW QUESTION # 92

When reviewing your site's SLEs, you notice a significantly high percentage of Asymmetry Uplink errors. What do these errors indicate?

- A. excessive client load
- B. slow 802.11r roams
- C. a coverage hole
- D. excessive non-Wi-Fi interference

Answer: C

Explanation:

A high percentage of Asymmetry Uplink errors indicates coverage holes caused by asymmetric uplink strength between the AP and client devices. According to Juniper Mist's official documentation: "Asymmetry Uplink-Clients received a weak signal due to asymmetric uplink strength between the AP and the client device. (Uplink traffic is the traffic going from the client to the AP, and then to the Internet.) Asymmetry can occur for various reasons, such as clients being too far from the AP." This generally means that clients are physically located at a distance or behind obstacles (such as walls), causing the AP to detect weak signals from those clients. Coverage holes arise when APs are placed such that some areas have insufficient RF coverage, and the low-powered client devices cannot maintain reliable communication with the AP-even though the AP, with its higher transmit power, might hear the client, the client cannot send strong enough signals back. The SLE classifier is designed to highlight such areas for remediation, prompting network admins to review and enhance AP placement or signal thresholds.

NEW QUESTION # 93

You are troubleshooting a wireless authentication problem.

Which two Mist features would help you in this scenario? (Choose two.)

- A. packet capture
- B. access point events

- C. client events
- D. audit logs

Answer: A,C

Explanation:

Packet Capture: This feature allows for detailed inspection of traffic at the packet level. Capturing packets can help identify issues with authentication protocols, such as misconfigured settings or failures in the authentication exchange process.

Client Events: Monitoring client events provides insights into the client's authentication attempts, including successes and failures. This data helps in pinpointing where in the process the failure occurs, whether at the client, access point, or authentication server.

NEW QUESTION # 94

Your manager asks you to configure all your remote Juniper EX Series switches to use Dynamic Port Configuration.

In this scenario, what are two criteria used for matching connected devices and assigning them their correct port and VLAN? (Choose two.)

- A. IP Address
- B. MAC Address
- C. Serial Number
- D. LLDP Chassis ID

Answer: B,D

Explanation:

Dynamic Port Configuration (DPC) in Juniper Mist Wired Assurance allows EX Series switches to automatically assign port profiles, VLANs, and policies to connected devices based on their unique identifiers. This automation simplifies switch management and ensures consistent configurations across distributed networks.

According to the Juniper Mist Wired Assurance Configuration and Dynamic Port Management Guide:

"Dynamic Port Configuration matches connected endpoints using identifiers such as LLDP chassis ID and MAC address to assign the appropriate port profile or VLAN automatically."

* LLDP Chassis ID (C): Identifies the connected device by its LLDP advertisement, often representing a switch, phone, or AP.

* MAC Address (D): Provides unique device identification, ensuring precise port and VLAN assignment even when LLDP data is unavailable.

Options A (Serial Number) and B (IP Address) are not used for port configuration matching in DPC because they are not always available at the time of link establishment.

Therefore, the correct answers are C. LLDP Chassis ID and D. MAC Address.

NEW QUESTION # 95

.....

Passing the test JN0-253 certification can prove you are that kind of talents and help you find a good job with high pay and if you buy our JN0-253 guide torrent you will pass the exam successfully. Our product boosts many merits and useful functions to make you to learn efficiently and easily. Our JN0-253 guide questions are compiled and approved elaborately by experienced professionals and experts. The download and tryout of our JN0-253 Torrent question before the purchase are free and we provide free update and the discounts to the old client. Our customer service personnel are working on the whole day and can solve your doubts and questions at any time.
