## Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q34-Q39):

### NEW QUESTION # 34

In which two ways does FortiSASE help organizations ensure secure access for remote workers?  
(Choose two.)

- A. It uses the identity and access management (IAM) portal to validate the identities of remote workers.
- B. It uses the FortiCloud organizational units to assign endpoint profiles to remote workers.
- C. It offers zero trust network access (ZTNA) capabilities.
- D. It secures traffic from endpoints to cloud applications.

**Answer: C,D**

**Explanation:**

FortiSASE ensures secure access for remote workers by protecting traffic between endpoints and cloud applications and enforcing ZTNA policies that validate user identity and device posture before granting access to corporate resources.

### NEW QUESTION # 35

Refer to the exhibits. A FortiSASE administrator has configured FortiSASE as a spoke to a FortiGate hub. The tunnel is up to the FortiGate hub. However, the remote FortiClient is not able to access the web server hosted behind the FortiGate hub. Based on the exhibits, what is the reason for the access failure?

- A. The server subnet BGP route was not received on FortiSASE.
- B. The hub firewall policy does not include the FortiClient address range.
- C. A private access policy has denied the traffic because of failed compliance
- D. The hub is not advertising the required routes.

Answer: A

Explanation:

The FortiSASE BGP learned routes do not include the 10.160.160.0/24 subnet (server network).

Although the FortiGate hub is advertising this route (10.160.160.0/24) to FortiSASE, it is not visible in the FortiSASE BGP route table - indicating a routing issue. Without this route, FortiSASE cannot forward traffic from FortiClient to the server.

## NEW QUESTION # 36

Which two are required to enable central management on FortiSASE? (Choose two.)

- A. FortiSASE connector configured on FortiManager.
- B. The FortiManager IP address in the FortiSASE central management configuration.
- C. FortiSASE central management entitlement applied to FortiManager.
- D. FortiManager and FortiSASE registered under the same FortiCloud account.

Answer: A,D

Explanation:

To enable central management, FortiManager must have a FortiSASE connector configured, and both FortiSASE and FortiManager must be registered under the same FortiCloud account to establish trust and synchronization.

## NEW QUESTION # 37

Which secure internet access (SIA) use case minimizes individual workstation or device setup, because you do not need to install FortiClient on endpoints or configure explicit web proxy settings on web browser-based end points?

- A. SIA for inline-CASB users
- B. SIA for site-based remote users
- C. SIA for SSLVPN remote users
- D. SIA for agentless remote users

**Answer: B**

Explanation:

In this use case, secure internet access (SIA) is configured at the site level rather than on individual devices. This approach eliminates the need for individual endpoint setup, such as installing FortiClient or configuring web proxy settings on each workstation or device. It allows centralized management and secure internet access for all users at the site level, simplifying deployment and maintenance.

#### NEW QUESTION # 38

Which description of the FortiSASE inline-CASB component is true?

- A. It has limited visibility when data is transmitted.
- B. It relies on API to integrate with cloud services.
- C. It is placed outside the traffic path.
- **D. It detects data in motion.**

**Answer: D**

Explanation:

FortiSASE inline-CASB operates in the traffic path to provide real-time visibility and control over data in motion as it is transmitted to and from cloud applications.
