

# HPE7-A11 Exam Sample Questions | Exam HPE7-A11 Price

If you want to get a higher position in your company, you must do an excellent work. Then your ability is the key to stand out. Perhaps our HPE7-A11 study guide can help you get the desirable position. At present, many office workers are willing to choose our HPE7-A11 Actual Exam to improve their ability. With the help of our HPE7-A11 exam questions, not only they have strengthened their work competence and efficiency, but also they gained the certification which is widely accepted by the bigger enterprise.

To let the clients have an understanding of their mastery degree of our HPE7-A11 study materials and get a well preparation for the test, we provide the test practice software to the clients. The test practice software of HPE7-A11 study materials is based on the real test questions and its interface is easy to use. The test practice software boosts the test scheme which stimulate the real test and boost multiple practice models, the historical records of the practice of HPE7-A11 Study Materials and the self-evaluation function.

## Free PDF 2026 HPE7-A11: Efficient HPE Network Campus Access Professional Architect Exam Exam Sample Questions

We all know the effective diligence is in direct proportion to outcome, so by years of diligent work, our experts have collected the frequent-tested knowledge into our HPE7-A11 practice materials for your reference. So our HPE7-A11 training materials are triumph of their endeavor. By resorting to our HPE7-A11 practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our HPE7-A11 actual tests, the passing rate is 98% percent. So your chance of getting success will be increased greatly by our HPE7-A11 materials.

## HPE Network Campus Access Professional Architect Exam Sample Questions (Q57-Q62):

### NEW QUESTION # 57

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge. The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use. The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client has provided floorplans, wall density, and ceiling heights for the wireless deployment in the carpeted office space. What else will be needed to write an accurate bill of material? (Select two)

- A. ceiling construction details
- B. PoE port details
- C. sprinkler details
- D. flooring information

**Answer: A,B**

Explanation:

Ceiling construction details are essential for a wireless deployment because the material and structure of the ceiling can affect the propagation of wireless signals. Different materials can absorb or reflect RF signals differently, impacting coverage and signal strength. Understanding ceiling construction helps in planning the placement of access points for optimal coverage and performance. PoE (Power over Ethernet) port details are necessary to ensure that the wired network infrastructure can provide power to the access points and other PoE-enabled devices like VoIP phones and cameras. This information is critical for planning the power budget and ensuring that the network can support the power requirements of all connected devices, ensuring a stable and reliable network infrastructure.

### NEW QUESTION # 58

Why is it important to assess the current security posture during the discovery phase?

- A. To evaluate the aesthetic design of the network layout
- B. To determine the physical location of network devices
- C. To decide on the color scheme of network cables
- D. To identify vulnerabilities that need to be addressed in the new design

**Answer: D**

### NEW QUESTION # 59

ACME retail has 38 locations spread out across Ave US states and two provinces in Canada.

They are looking to grow 20% over the next two years. They have an HO with a staff of 200 employees. The organization has eight Regional Managers and two VPs who work from home and the road. Stores typically have 17 employees on average per location. The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main location is 240K sq ft (22300 sq m) and the Canadian warehouse is 130K sq ft (12100 sq m). The forklifts on the loading docks are equipped with a wireless tablet on board. A typical store is reportedly about 60,000 sq ft (5575 sqm) and smaller stores are planned at 25,000 sq ft (2320 sq m). The locations need to expand the abilities to vendors that need to add setup displays or interactive kiosks in the stores. The current infrastructure was installed in 2015 and used wireless N technology in a coverage model. The wiring is Cat5, and they are unsure of the fiber connections. The inventory is all placed on the floor when it is delivered to the local store. Inventory control is handled through Zebra barcode scanners, and they have had a lot of issues in getting signals throughout the stores and this makes monthly inventory difficult. The organization has a small help desk to troubleshoot issues that happen at the retail locations and PC support for the office. The company is looking to upgrade away from the current pbx system later this year. With the need to grow and cut costs, they are interested in moving the data to the cloud but need to get almost real-time inventory

control for the online service to function.

The network has all been wired over the last ten years, but with the new systems being all wireless, they have seen the trend to offer wireless to all the vendors for their needs but also would like to allow employees, guests, and contractors all to use it. With the new IT director starting next week, the project has been set by the CTO of the company. The marketing group has asked how they can interact with the customers and get more info, while the IT support desk needs to cut staff in half. The office has an MDF and two IDF's located on floors one and two.

The HOF is in the basement, and you have multiple WAN circuits for the HO links. Each store has a local handoff from the cable company (ethernet) in the middle of the store in the office, so distance for the wiring is not an issue. The customer has budget concerns but does want something that could last 7+ years. The customer would like to host all the applications at the HO Data Center. Which design would meet the customer's requirements?

- A. Aruba 10K switch with Pensando
- B. HPE Comware switches
- C. Aruba Instant OS access points
- D. Aruba UXI Sensors
- E. Aruba SO-Branch Architecture

**Answer: E**

Explanation:

For ACME Retail, which aims to host all applications at the HO Data Center and has multiple locations spread across different geographical areas, the Aruba SD-Branch Architecture would be the most suitable design to meet their requirements. This architecture provides a simplified, integrated branch networking solution combining SD-WAN, LAN, and security features. It enables centralized management and control, allowing ACME Retail to efficiently route traffic from branch locations to the HO Data Center, ensuring secure and reliable access to applications. The SD-Branch solution can accommodate the company's growth and adapt to changing network demands, making it an ideal choice for a scalable and flexible network infrastructure that supports ACME Retail's business objectives.

#### NEW QUESTION # 60

Why is version control important when managing network design documentation?

- A. To track changes and maintain consistency across revisions
- B. To prevent all stakeholders from viewing changes
- C. To avoid using diagrams in presentations
- D. To limit access to all documentation

**Answer: A**

#### NEW QUESTION # 61

Which is true when it comes to HPE Aruba Networking Central licensing for gateways?

- A. WLAN Gateway licenses allow normal SD-Branch features within a campus.
- B. Gateway normal licensing is subdivided into three categories: Foundation, Advanced, and Foundation Base.
- C. SD-WAN Gateway functionality requires security licensing.
- D. SD-Branch Gateway licenses allow normal WLAN Gateway features within a campus..

**Answer: D**

Explanation:

SD-Branch Gateway licensing is inclusive and enables gateway capabilities across both branch and campus use cases, meaning it also supports standard WLAN Gateway features when deployed in a campus environment.

#### NEW QUESTION # 62

.....

To let the clients have an understanding of their mastery degree of our HPE7-A11 study materials and get a well preparation for the test, we provide the test practice software to the clients. The test practice software of HPE7-A11 study materials is based on the real test questions and its interface is easy to use. The test practice software boosts the test scheme which stimulate the real test and
