質問 # 26

You are a Power Platform consultant for an internet support company.

The company lacks a budget to buy third-party ISVs or add-ons.

The company requires a new system that achieves the following:

- * All support issues must come in by email, need to be logged, and assigned to the support group.
- * Accounts must synchronize with the parent company Oracle database.
- * Reports must be sent to the executives on a weekly basis.
- * No custom code will be used in the system.

You need to recommend the components that should be configured.

Which two components should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Microsoft Customer Voice
- B. Microsoft Dataverse
- C. Power Virtual Agents
- D. server-side synchronization

正解: B、D

解説:

The Dynamics 365 Customer Voice data is stored in Microsoft Dataverse.

Dynamics 365 Customer Voice is an enterprise feedback management application you can use to easily keep track of the customer metrics that matter the most to your business. ... It provides a personalized experience, enabling you to collect customer feedback and get relevant insights quickly and easily, all in a few clicks.

質問 # 27

You need to recommend a solution to meet user interface requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement

Visual representation of gauge readings with minimum and maximum tolerances.

Add visibility to the manufacturing inspection records for onsite technicians.

Solution

Create and embed a Power BI radial gauge.
Create and embed a custom visualization component.
Create and embed a standard Power Apps donut chart.

Configure mobile offline synchronization.
Add an inspection order to the work order form
Modify the sitemap for Dynamics 365 Field Service.

Explanation

Requirement

Visual representation of gauge readings with minimum and maximum tolerances.

Add visibility to the manufacturing inspection records for onsite technicians.

Create and embed a Power BI radial gauge.
Create and embed a custom visualization component.
Create and embed a standard Power Apps donut chart.

Configure mobile offline synchronization.
Add an inspection order to the work order form
Modify the sitemap for Dynamics 365 Field Service.

Box 1: Create and embed a Power BI radial gauge

A radial gauge chart has a circular arc and shows a single value that measures progress toward a goal or a Key Performance Indicator (KPI). The line (or needle) represents the goal or target value. The shading represents the progress toward that goal. The value inside the arc represents the progress value. Power BI spreads all possible values evenly along the arc, from the minimum (left-most value) to the maximum (right-most value).

In this example, you're a car retailer tracking the sales team's average sales per month. The needle represents a 140 cars sales goal. The minimum possible average sales is 0 and the maximum is 200. The blue shading shows that the team is

averaging approximately 120 sales this month.

Box 2: Add an inspection order to the work order form

You can add inspections to work orders in Dynamics 365 Field Service.

Field Service inspections are digital forms that technicians use to quickly and easily answer a list of questions as part of a work order. The list of questions can include safety protocols, pass-and-fail tests for a customer asset, an interview with a customer, or other audits and assessments performed before, during, or after a work order.

質問 # 28

You need to recommend the field type to use for configuring meal selections during reservation.

Which field type should you recommend?

- A. Two Options
- B. Global Option Set
- C. Lookup
- D. Option Set

正解: C

解説:

Scenario:

* Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.

* The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.

In PowerApps Option set is one of the field types you can use in your Entity. The information type that Option Set stores is a list of text values. And here comes the Option Set advantage - once you define its text values you can centrally managed it.
