There is no doubt that in the future information society, knowledge and skills will be a major driver for economic growth and one of the major contributors to the sustainable development of the information industry. And getting the related Check Point Certified Security Expert R81 certification in your field will be the most powerful way for you to show your professional knowledge and skills. However, it is not easy for the majority of candidates to prepare for the exam in order to pass it, if you are one of the candidates who are worrying about the exam now, congratulations, there is a panacea for you--our 156-315.81 Study Tool.

## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q177-Q182):

### NEW QUESTION # 177

What is the difference between an event and a log?

- A. Events are collected with SmartWorkflow form Trouble Ticket systems
- B. Events are generated at gateway according to Event Policy
- C. A log entry becomes an event when it matches any rule defined in Event Policy
- D. Log and Events are synonyms

**Answer: C**

Explanation:

The difference between an event and a log is that a log entry becomes an event when it matches any rule defined in Event Policy. A log entry is a record of a network activity that is generated by a Security Gateway or a Management Server. An event is a log entry that meets certain criteria and triggers an action or a notification. The other options are either not true or not accurate definitions of events and logs. References:

### NEW QUESTION # 178

What is the best method to upgrade a Security Management Server to R81.x when it is not connected to the Internet?

- A. Advanced upgrade or CPUSE offline upgrade
- B. CPUSE offline upgrade only
- C. Advanced Upgrade only
- D. SmartUpdate offline upgrade

**Answer: A**

Explanation:

The best method to upgrade a Security Management Server to R81.x when it is not connected to the Internet is either Advanced upgrade or CPUSE offline upgrade. Advanced upgrade is a manual procedure that involves backing up the current configuration, installing the new version from an ISO image, and restoring the configuration. CPUSE offline upgrade is an automated procedure that involves downloading the upgrade package from the Check Point User Center, transferring it to the Security Management Server, and installing it using CPUSE. SmartUpdate offline upgrade is not a valid option, as SmartUpdate is a tool for managing licenses and software packages on multiple gateways and servers. Reference: 1: Check Point Software, Getting Started, Upgrading Security Management Servers.

### NEW QUESTION # 179

In the Firewall chain mode FFF refers to:

- A. No Match
- B. Stateless Packets
- C. Stateful Packets
- D. All Packets

**Answer: D**

Explanation:

In the Firewall chain mode FFF refers to all packets. Firewall chain mode is a feature that allows administrators to define how packets are processed by different firewall kernel modules in inbound and outbound directions. FFF is one of the predefined chain modes that applies all firewall kernel modules (Firewall, VPN, IPS, etc.) to all packets, regardless of their state or connection. This

mode provides maximum security, but also consumes more CPU resources.

#### NEW QUESTION # 180

What is the amount of Priority Queues by default?

- A. There are 8 priority queues and this number cannot be changed.
- B. There is no distinct number of queues since it will be changed in a regular basis based on its system requirements.
- **C. There are 8 priority queues by default, and up to 8 additional queues can be manually configured**
- D. There are 7 priority queues by default and this number cannot be changed.

**Answer: C**

Explanation:

Explanation

There are 8 priority queues by default, and up to 8 additional queues can be manually configured<sup>1</sup>. Priority Queues are a feature of SecureXL that accelerates the performance of the Security Gateway by offloading CPU-intensive operations to the SecureXL device<sup>2</sup>. Priority Queues are used to prioritize traffic when the Security Gateway is stressed and needs to drop packets<sup>2</sup>. By default, there are 8 priority queues, each with a different priority level and type of connections<sup>2</sup>. You can manually configure up to 8 additional queues by setting the relevant kernel parameters in \$FWDIR/boot/modules/fwkern.conf file<sup>1</sup>. You can also customize the queue length, the load balancing method, and the services that are considered as control connections<sup>1</sup>.
