## High Pass-Rate Valid Mule-Dev-301 Exam Tutorial for Real Exam

To write an effective Mule-Dev-301 learning guide, one needs to have a good command of knowledge related with the exam. Our experts who devoted themselves to Mule-Dev-301 practice materials over ten years constantly have been focused on proficiency of Mule-Dev-301 Exam simulation with irreplaceable attributes. On some tough points, they use specific facts, definite figures to stress concretion. With our Mule-Dev-301 study guide, you will know what will come in the real exam.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q30-Q35):

### NEW QUESTION # 30

When registering a client application with an existing API instance or API Group instance, what is required to manually approve or reject request access?

- A. To configure the SLA tier for the application
- B. To configure the SLA tier for the application and have the Exchange Administrator permission
- C. To configure the SLA tier for the application and have the role of Organization Administrator, API Manager Environment Administrator, or the Manage Contracts permission
- D. To only have Exchange Administrator permission

**Answer: D**

Explanation:

To manually approve or reject request access when registering a client application with an existing API instance or API Group instance, it is required to configure the SLA tier for the application and have one of the following roles or permissions: Organization Administrator, API Manager Environment Administrator, or Manage Contracts permission. These roles or permissions allow managing client applications and contracts in API Manager. Reference: <https://docs.mulesoft.com/api-manager/2.x/client-applications#managing-client-applications-and-contracts>

### NEW QUESTION # 31

An API has been built to enable scheduling email provider. The front-end system does very little data entry validation, and problems have started to appear in the email that go to patients. A validate-customer" flow is added validate the data.

What is he expected behavior of the 'validate-customer" flow?

- A. If the email address is invalid, processing continues to see if the appointment data and customer name are also invalid
- B. If the appointment date and customer name are invalid, a SCHEDULE:INVALID\_APPOINTMENT\_DATE error is raised
- C. If all of the values are invalid the last validation error is raised:SCHEDULE:INVALID\_CUSTOMER\_NAME
- D. If only the email address Is invalid a VALIDATION.INVALID\_EMAIL error is raised

#### Answer: D

Explanation:

The validate-customer flow uses an until-successful scope to validate each field of the customer data. The until-successful scope executes its processors until they succeed or exhausts the maximum number of retries. If any processor fails, it raises an error and stops executing the remaining processors. Therefore, if only the email address is invalid, a VALIDATION.INVALID\_EMAIL error is raised and the validation of appointment date and customer name is skipped. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope>

### NEW QUESTION # 32

A Mule implementation uses a HTTP Request within an Unit Successful scope to connect to an API.

How should a permanent error response like HTTP:UNAUTHORIZED be handle inside Until Successful to reduce latency?

- A. In Until Successful configuration, set the retry count to 1 for error type HTTP: UNAUTHORIZED.
- B. Put the HTTP Request inside a try scope in Unit Successful.  
In the error handler, use On Error Continue to catch permanent errors like HTTP UNAUTHORIZED.
- C. Configure retrying until a MULERTRY\_EXHAUSTED error is raised or the API responds back with a successful response.
- D. Put the HTTP Request inside a try scope in Unit Successful.  
In the error handler, use On Error Propagate to catch permanent errors like HTTP UNAUTHORIZED.

#### Answer: B

Explanation:

To handle a permanent error response like HTTP:UNAUTHORIZED inside Until Successful, the developer should put the HTTP Request inside a try scope in Unit Successful, and use On Error Continue to catch permanent errors like HTTP UNAUTHORIZED in the error handler. This way, the developer can avoid retrying requests that will always fail due to a permanent error, and reduce latency. On Error Continue allows the flow to continue processing after handling the error. Reference:

<https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope> <https://docs.mulesoft.com/mule-runtime/4.3/on-error-continue-concept>

### NEW QUESTION # 33

Which statement is true when working with correlation IDS?

- A. The Anypoint MQ Connector automatically propagates correlation IDS
- B. The HTTP Listener generates correlation IDS unless a correlation ID is received in the HTTP request
- C. The VM Connector does not automatically propagate correction IDs
- D. The HTTP Listener regenerates correlation IDs regardless of the HTTP request

#### Answer: B

Explanation:

When working with correlation IDs, the HTTP Listener generates correlation IDs unless a correlation ID is received in the HTTP request. In that case, it propagates the received correlation ID throughout the flow execution. Correlation IDs are used to track events across different flows or applications. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/about-mule-message#message-attributes>

## NEW QUESTION # 34

A Mule application deployed to multiple Cloudhub 2.0 replicas needs to temporarily persist large files over 10MB between flow executions, and routinely needs to query whether the file data exists on separate executions.

How can this be achieved?

- A. Use an in-memory Object Store
- B. Store the key and full contents of the file, caching the filename and location between requests
- C. Store the contents of the file on separate storage, and store the key and location of the file Object using Object Store v2
- D. Store the key and full contents of the file in an Object Store

**Answer: C**

Explanation:

To temporarily persist large files over 10MB between flow executions, and routinely query whether the file data exists on separate executions, the developer should store the contents of the file on separate storage, and store the key and location of the file object using Object Store v2. This way, the developer can avoid storing large files in memory or exceeding the size limit of Object Store v2 (10MB per object). The developer can also use Object Store v2 operations to query, retrieve, or delete the file object by its key.

Reference: <https://docs.mulesoft.com/object-store/osv2-faq#can-i-store-files-in-object-store-v2>

## NEW QUESTION # 35

.....

So it is very necessary for you to try your best to get the Mule-Dev-301 certification in a short time. If you are determined to get the certification, our Mule-Dev-301 question torrent is willing to give you a hand; because the Mule-Dev-301 study materials from our company will be the best study tool for you to get the certification. Now I am going to introduce our Mule-Dev-301 Exam Question to you in detail, please read our introduction carefully, we can make sure that you will benefit a lot from it. If you are interest in our Mule-Dev-301 exam material, you can buy it right now.
