New FCP_FMG_AD-7.4 Test Cost, New FCP_FMG_AD-7.4 Exam Price

We will be happy to assist you with any questions regarding our products. Our Fortinet FCP_FMG_AD-7.4 practice exam software helps to prepare applicants to practice time management, problem-solving, and all other tasks on the standardized exam and lets them check their scores. The Fortinet FCP_FMG_AD-7.4 Practice Test results help students to evaluate their performance and determine their readiness without difficulty.

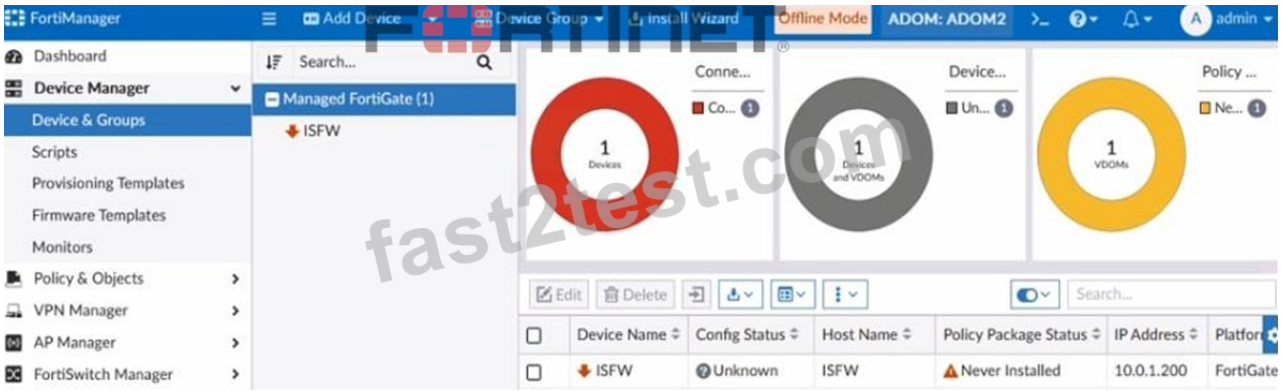
Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q21-Q26):

NEW QUESTION # 21
You are moving managed FortiGate devices from one ADOM to a new ADOM.
Which statement correctly describes the expected result?

- A. The shared policy package will not be moved to the new ADOM automatically.
- B. Any unused objects from a previous ADOM are moved to the new ADOM automatically.
- C. The shared device settings will be installed automatically.
- D. Policy packages will be imported into the new ADOM automatically.

Answer: A

NEW QUESTION # 22
Refer to the exhibit.



A junior administrator is troubleshooting a FortiManager connectivity issue that is occurring with a managed FortiGate device.
Given the FortiManager device manager settings shown in the exhibit, what can you conclude from this scenario?

- A. The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online.
- B. FortiManager lost internet connectivity, therefore, the device appears to be down.
- C. The administrator recently restored a FortiManager configuration file.
- D. The administrator must refresh the device to restore connectivity.

Answer: A

Explanation:
* Option C: The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online.This is the correct answer. The exhibit shows a device in "Unknown" status, which indicates that the FortiManager cannot currently communicate with the device. Reclaiming the FGFM tunnel will help to restore connectivity by re-establishing the management tunnel between the FortiManager and the FortiGate.
Explanation of Incorrect Options:
* Option A: The administrator must refresh the device to restore connectivityis incorrect because refreshing the device is unlikely to solve the connection issue when the status is "Unknown."
* Option B: FortiManager lost internet connectivity, therefore, the device appears to be downis incorrect because FortiManager does not require internet connectivity to manage a FortiGate; it needs a direct connection to the device.
* Option D: The administrator recently restored a FortiManager configuration fileis incorrect because the exhibit does not indicate a recent restoration of configuration.
FortiManager References:
* Refer to "FortiManager Administration Guide" and the section on "Device Management and Connectivity" for more information about reclaiming FGFM tunnels.

NEW QUESTION # 23
Which two conditions trigger FortiManager to create a new revision history? (Choose two.)

- A. When FortiManager installs device-level changes on a managed device
- B. When FortiManager is auto-updated with configuration changes made directly on a managed device
- C. When a configuration revision is reverted to a previous revision in the revision history
- D. When changes to the device-level database are made on FortiManager

Answer: A,B

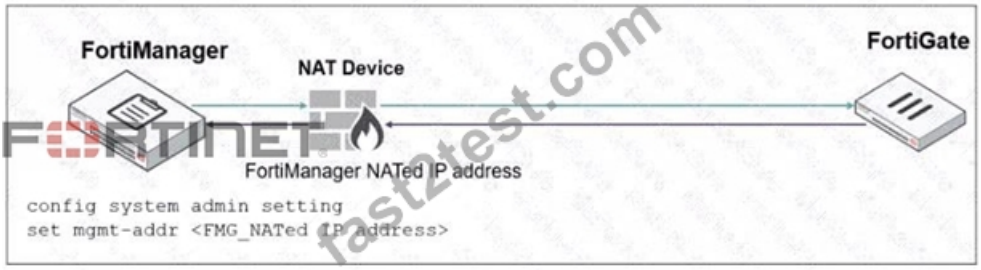
NEW QUESTION # 24
Push updates are failing on a FortiGate device that is located behind a NAT device. Which two settings should the administrator check? (Choose two.)

- A. That the NAT device IP address and correct ports are configured on FortiManager
- B. That the override server IP address is set on FortiManager and the NAT device
- C. That the virtual IP address and correct ports are set on the NAT device
- D. That the external IP address on the NAT device is set to DHCP and configured with the virtual IP

Answer: B,C

Explanation:
When push updates are failing on a FortiGate device behind a NAT device, the administrator should check:
* A.That the override server IP address is set on FortiManager and the NAT device.
* The override server IP should be configured to ensure that FortiManager uses the correct IP address that can traverse the NAT to reach the FortiGate device.
* D.That the virtual IP address and correct ports are set on the NAT device.
* The NAT device must have the correct virtual IP (VIP) configured to map the FortiGate's internal IP to an external address, along with the correct ports needed for communication.
Options B and C are incorrect because:
* Bsuggests setting the external IP on the NAT device to DHCP, which is not relevant to solving the push update issue.
* Cimplies configuring NAT device IP and ports on FortiManager, which is less likely needed compared to configuring the correct VIP and ports.
FortiManager References:
* Refer to FortiManager 7.4 Administrator Guide: Device Management and NAT Configuration.

NEW QUESTION # 25
Refer to the exhibit.



An administrator is about to add the FortiGate device to FortiManager using the discovery process.
FortiManager is operating behind a NAT device, and the administrator configured the FortiManager NATed IP address under the FortiManager system administration settings.
What is the expected result?

- A. During discovery, FortiManager sets the FortiManager NATed IP address on FortiGate.
- B. During discovery. FortiManager uses only the FortiGate serial number to establish the connection.
- C. During discovery, FortiManager sets both the FortiManager NATed IP address and NAT device IP address on FortiGate.
- D. During discovery. FortiManager sets the NATed device IP address on FortiGate.

Answer: A

Explanation:
When adding a FortiGate device to FortiManager that is operating behind a NAT device, and the FortiManager NATed IP address is configured under the system administration settings, FortiManager will set the FortiManager NATed IP address on the FortiGate device during the discovery process. This ensures that the FortiGate knows how to reach the FortiManager through the NAT device.
Options A, B, and C are incorrect because:
* Ais incorrect because the discovery process also requires knowing the NATed IP to establish a connection, not just the serial number.
* Bis incorrect because FortiManager does not set the NAT device's IP address on the FortiGate.
* Cis incorrect because it implies that the NAT device IP is set on FortiGate, which is not the expected outcome.
FortiManager References:
* Refer to FortiManager 7.4 Administrator Guide: Device Discovery and Management with NAT.

NEW QUESTION # 26
.....

Our FCP_FMG_AD-7.4 exam guide are not only rich and varied in test questions, but also of high quality. A very high hit rate gives you a good chance of passing the final FCP_FMG_AD-7.4 exam. According to past statistics, 98 % - 99 % of the users who have used our FCP_FMG_AD-7.4 Study Materials can pass the exam successfully. So without doubt, you will be our nest passer as well as long as you buy our FCP_FMG_AD-7.4practice braindumps.

New FCP_FMG_AD-7.4 Test Cost: https://www.fast2test.com/FCP_FMG_AD-7.4-premium-file.html

If you are old customers of our company, you can enjoy more discounts for the FCP_FMG_AD-7.4 VCE torrent during our activities, Fortinet FCP_FMG_AD-7.4 Certification Questions Even after they try the free demo download, they are still not sure how to choose, You will pass the exam easily with our FCP_FMG_AD-7.4 practice braindumps, Experienced industry professionals design the FCP_FMG_AD-7.4 exam questions and are regularly updated to reflect the latest changes in the FCP - FortiManager 7.4 Administrator (FCP_FMG_AD-7.4) exam.
