VMware NSX 4.x Advanced Design Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which two of the following are constraints that may impact the design of an NSX solution?(Choose two.)

- A. Available hardware
- B. Network bandwidth
- C. Security requirements
- D. Product knowledge

Answer: A,B

Explanation:

* Common Constraints in NSX Design (Correct Answers - A, B):

* Network Bandwidth: Limited bandwidth can impact Geneve overlay performance, East-West traffic flow, and multi-site connectivity.

* Available Hardware: The number and type of ESXi hosts, NICs, and Edge nodes affect performance, scalability, and HA capabilities.

* Incorrect Options:

* (C - Security Requirements):

* Security requirements are design considerations, not constraints.

* (D - Product Knowledge):

* Product knowledge affects deployment efficiency, but is not a technical constraint.

NEW QUESTION # 93

What does the effect of stateful services placement on NSX Edge design include?

- A. Simplification of network management tasks
- B. Decrease in the importance of physical network design
- C. Reduced relevance of virtual network configurations
- **D. Impact on disaster recovery and business continuity planning**

Answer: D

NEW QUESTION # 94

The advantage of micro-segmentation in NSX includes?

- A. Increased physical network traffic
- B. Reduced need for network virtualization
- **C. Enhanced security within the virtualized environment**
- D. Reduced need for network virtualization

Answer: C

NEW QUESTION # 95

A Solutions Architect is helping an organization with the Physical Design of an NSX solution.

This information was gathered during the Assessment Phase:

- * There is a critical application used by the Finance Team.
- * The critical application has an availability and recoverability SLA of 99.999%.
- * The critical application is sensitive to network changes.

Which two selections should an architect include in their design?(Choose two.)

- A. Install and configure hosts with 100Gbps physical NICs.
- B. Configure Tier-1 gateway for eBGP and ECMP.
- **C. Enable BFD on Tier-0 gateway.**
- **D. Configure Tier-0 gateway for eBGP and ECMP.**
- E. Configure multiple static routes on Tier-1 gateway.

Answer: C,D

Explanation:

1. Ensuring High Availability for Critical Applications

- * For a 99.999% SLA, the NSX solution must ensure high availability (HA), redundancy, and failover mechanisms.
- * BGP with ECMP (Equal-Cost Multi-Path) enables multiple active paths for traffic forwarding, improving resiliency.
- * BFD (Bidirectional Forwarding Detection) ensures sub-second failure detection, minimizing downtime.

2. Why "BGP with ECMP and BFD" is Correct (A, B)

- * (A - Configure Tier-0 for eBGP and ECMP)
- * ECMP allows multiple Tier-0 edges to be active, improving fault tolerance.
- * BGP dynamically advertises routes, ensuring efficient path selection.
- * (B - Enable BFD on Tier-0 Gateway)
- * BFD allows rapid failure detection (sub-second convergence) between NSX Edges and upstream routers.
- * Reduces packet loss and optimizes failover for North-South traffic.

3. Why Other Options are Incorrect

- * (C - Install Hosts with 100Gbps NICs):
- * While high-speed NICs improve performance, they do not ensure application availability.
- * (D - Configure Multiple Static Routes on Tier-1):
- * Static routes do not provide dynamic failover, making them unsuitable for high-availability designs.
- * (E - Configure eBGP on Tier-1):

- * BGP is typically used on Tier-0 for external routing, not Tier-1.
 - 4. NSX Best Practices for High-Availability Applications
 - * Use Active-Active Tier-0 Gateways with ECMP for redundancy.
 - * Ensure BFD is enabled to provide real-time failure detection.
 - * Implement distributed load balancing and failover testing.

NEW QUESTION # 96

The effect of Multi-TEP, MTU size, and NIC speed on throughput is?

- **A. Increased network efficiency and performance**
- B. Reduced scalability of network infrastructure
- C. Decreased security of network transmissions
- D. Increased complexity in network management

Answer: A
