## PDII-JPN Exam Materials | Exam PDII-JPN Demo

However, you should keep in mind to pass the (PDII-JPN) certification exam is not an easy task. It is a challenging job. If you want to pass the PDII-JPN exam then you have to put in some extra effort, time, and investment then you will be confident to pass the (PDII-JPN) exam. With the complete and comprehensive (PDII-JPN) exam dumps preparation you can pass the (PDII-JPN) exam with good scores. The PassTestking PDII-JPN Questions can be helpful in this regard. You must try this.

## Salesforce Sample Questions (Q126-Q131):

### NEW QUESTION # 126

Salesforce組織には50,000件以上の連絡先が登録されています。新しいビジネスプロセスでは、これらすべての連絡先レコードからデータを集計する計算が必要です。この計算は、1日に1回、営業時間後に実行する必要があります。これを実現するために、開発者はどの2つのステップを実行する必要がありますか？

- A. Queueable インターフェースを実装します。
- B. Database.Batchable インターフェースを実装します。
- C. @future アノテーションを使用します。
- D. Schedulable インターフェースを実装します。

**Answer: B,D**

Explanation:

This scenario presents two distinct requirements: processing a large volume of data (50,000 records) and running the process at a specific time (once a day after business hours).

\* Database.Batchable (Option B): Processing 50,000 records in a single synchronous transaction will exceed Apex Governor Limits (specifically the CPU time limit or the heap size limit). Batch Apex allows the system to process these records in smaller chunks (batches), ensuring that the calculation completes without hitting limits.

\* Schedulable (Option C): To ensure the job runs "once a day after business hours," the Schedulable interface is required. The developer allows the class to be scheduled via the Apex Scheduler or the UI.

The standard pattern for this use case is to create a class that implements Schedulable, and inside its execute method, instantiate and execute the Batch class (Database.executeBatch). This combines precise timing with bulk processing capabilities.

### NEW QUESTION # 127

ビジネスでは、すべての親レコードに子レコードが必要です。開発者は、親レコードと子レコードを挿入する2つの DML ステートメントを含む Apex メソッドを作成します。

検証ルールにより、子レコードの作成がブロックされます。このメソッドは、try/catch ブロックを使用して DML 例外を処理します。

親が常に子レコードを持つようにするには、開発者は何をすべきでしょうか？

- A. エラーが発生した場合にロールバックするデータベース セーブポイントを設定します。
- B. Database.insert() を使用し、all=パラメーターを true に設定します。
- C. 子レコードの DML 操作でエラーが発生した場合に、catch ステートメントの親レコードを削除します。
- D. 子レコードでエラーが発生した場合は、親レコードで addError() を使用します。

**Answer: B**

### NEW QUESTION # 128

これを修正する正しい方法は何ですか？

- A. Limits.getLimitQueries() を使用して、発行できるクエリの総数を確認します。
- B. Test.startTest() を前に追加し、Test を追加します。コードの 18 行目の後の stopTest()。
- C. Test.startTest() を前に追加し、Test を追加します。コードの 7 行目と 20 行目の両方の後に stopTest() を実行します。
- D. DataFactory クラスを変更して作成するアカウントの数を減らし、トリガー内のクエリの数を減らします。

**Answer: B**

Explanation:

The correct way to fix the test method is to add Test.startTest() before and add Test.stopTest() after Line 18 of the code.

Test.startTest() and Test.stopTest() are methods that mark the start and the end of the test code and ensure that all asynchronous processes are completed before the test method finishes. This way, the developer can verify that the batch job is executed and the Account records are updated as expected. The developer should also use the System.assertEquals() method to assert the expected and actual values, instead of System.debug() which only prints the values to the debug log. Reference: [Testing Asynchronous Apex], [Test.startTest()], [System.assertEquals()]

### NEW QUESTION # 129

開発者は、無限ループをトリガーするアプリケーション イベントを作成します。  
この問題の原因は何でしょうか？

- A. プロジェクトにイベントが複数登録されています。
- **B. イベントはカスタム レンダラから発生します。**
- C. イベント ハンドラーがトリガーを呼び出します。
- D. イベントは「ontouchend」で発生し、処理されません。

**Answer: B**

### NEW QUESTION # 130

以下のテスト方法を参照してください。

□ テスト メソッドは、値をインクリメントする @future メソッドを呼び出します。

Number\_of\_Times\_Viewed\_\_c 値。アサーションは失敗します。

閲覧回数\_c は 0 です。

これを修正する最適な方法は何ですか？

- A. アサーションを system.assertequals (0, acctAfter Number\_Cf\_Times\_Viewed\_\_c) に変更します。
- B. Test.startTest() を前に追加し、Test.stopTest() を insert= acct の後に追加します。
- **C. 前に rest.startTest() を追加し、AuditUtil.incrementViewed() の後に Test.stopTest() を追加します。**
- D. 初期化を acct に変更します。Number\_of\_Times\_Viewed\_\_c = 1。

**Answer: C**

Explanation:

To fix the assertion failure in the test method, a developer should add Test.startTest() before and Test.stopTest() after AuditUtil.incrementViewed(). This way, the test method can force the asynchronous @future method to execute immediately and update the Number\_of\_Times\_Viewed\_\_c value before the assertion. Changing the assertion to 0 or the initialization to 1 would not test the functionality of the @future method. Inserting the Account before or after the @future method would not affect the execution of the asynchronous code. Reference: [Testing Asynchronous Apex], [Test Class]

### NEW QUESTION # 131

.....

Maybe you still strange to our PDII-JPN dumps pdf, you can download the free demo of the dump torrent before you buy. If you have any questions to our Salesforce exam questions torrent, please feel free to contact us and we will give our support immediately. You will be allowed to updating PDII-JPN Learning Materials one-year once you bought pdf dumps from our website.
