## Valid Drupal-Site-Builder Test Papers, Drupal-Site-Builder Reliable Test Sample

Our company has realized that a really good product is not only reflected on the high quality but also the consideration service, including the pre-sale service and after-sale service. So we not only provide all people with the Drupal-Site-Builder test training materials with high quality, but also we are willing to offer the fine pre-sale and after-sale service system for the customers, these guarantee the customers can get that should have. If you decide to buy the Drupal-Site-Builder learn prep from our company, we are glad to arrange our experts to answer your all questions about the study materials. We believe that you will make the better choice for yourself by our consideration service.

## Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q12-Q17):

### NEW QUESTION # 12

The UX team has suggested that "Social share" buttons currently visible in the sidebar region should be moved to the footer. The Social share buttons are implemented in a custom block.

How should you make the requested changes?

- A. For each content type, use the Layout Builder module's "manage layout" feature to reassign the block from the Sidebar region to the Footer region.
- B. From the block layout admin page, drag the existing block from the Sidebar region to the Footer region.
- C. From the "Appearance" admin page, reconfigure the site's theme to place the block in the Footer region instead of the

Sidebar.

- D. Using the "Basic page" content type's "Manage display" interface, drag the existing block from the Sidebar region to the Footer region.

**Answer: B**

Explanation:

In Drupal 10 and Drupal 11, blocks are placed and managed through the Block Layout system available at Structure # Block layout . Each theme defines regions such as Sidebar, Footer, Header, etc., and administrators can assign blocks to these regions.

Since the "Social share" buttons are implemented as a custom block , the correct approach is to reposition the block using the Block Layout admin interface . This interface allows site builders to move blocks between regions either by dragging or by editing the block's region setting. This matches Drupal's documented site- building practice for managing block placement.

Option A is incorrect because Manage display is used for configuring how fields are displayed on entities, not for block placement.

Option C is incorrect because the Appearance page controls themes, not individual block placement. Option D is unnecessary because Layout Builder is used for per-content or per-entity layouts, not for globally placed blocks like a social share block.

Therefore, the simplest and correct solution is to move the block via the Block Layout page, making option B correct.

### NEW QUESTION # 13

Recent log entries of your site show that there are too many failed login attempts for the site super admin user (user 1).

How can you better secure the Drupal super admin user (user 1) from outside attacks?

- A. Remove the "Administrator" role from user 1, which makes them an anonymous user.
- B. Cancel the user account for user 1.
- C. Only allow members of the Drupal community in good standing to be user 1.
- D. Do not give this user an obvious name like "admin" or "administrator" which are too easy to guess.

**Answer: D**

Explanation:

Drupal's official security guidance for the super user account ( user 1 ) specifically recommends that administrators do not name the first account "admin" or something obvious . The reason is straightforward: obvious usernames make brute-force and credential-guessing attacks easier, because attackers already know half of the login credentials they need to target. Drupal's administration and security documentation also recommends limiting direct use of user 1 and protecting it carefully because it is a uniquely powerful account.

That makes option D the correct answer. The other options do not match Drupal's documented best practices.

There is no Drupal security rule about "members of the Drupal community in good standing" being allowed to use user 1. Canceling the user 1 account is not the recommended solution for this situation, and removing the Administrator role from user 1 would not make the account anonymous; in Drupal, user 1 is a special account with superuser behavior that is handled separately from ordinary role assignment. Drupal's own guidance emphasizes safer naming and tighter handling of the account, not these alternative actions.

### NEW QUESTION # 14

You have created a new View on the development environment.

How will you export the View to the production environment?

- A. Select synchronize configurations option on production environment
- B. Use backup and migrate module to export the view
- C. Make the required changes to the development site. Partial export using single export option and import on the live site
- D. This requires development effort and cannot be done by Drupal admin interface

**Answer: C**

Explanation:

In Drupal 10 and Drupal 11, a View is stored as configuration , and Drupal provides a built-in Configuration Management system to move configuration between environments. According to the official Drupal User Guide, when you want to move a single configuration item (such as a View), the recommended approach is to use the Single Export and Single Import functionality available in the admin interface.

On the development site, you navigate to Configuration # Development # Configuration synchronization # Export # Single item , select View , and copy the YAML configuration. Then, on the production site, you go to Import # Single item and paste the configuration to import it.

Option A refers to full configuration synchronization, which is typically used for complete site configuration deployment, not for a single View. Option B is incorrect because Backup and Migrate is meant for database backups, not configuration transfer. Option C is incorrect because Drupal provides a UI-based method for this task. Thus, the correct and documented approach is partial export/import using the single configuration option, making D the correct answer.

### NEW QUESTION # 15

Your Marketing Department notified you that the company has recently obtained a new Toll-free phone number for customer care. They have asked you to update the "Customer care contact information" posted on your website with the new number. The contact information appears in the sidebar of every page on the site. How should you make your updates? (Select 2 options)

- A. Click the "Edit" link on any page and make changes to the content in the editor form; repeat this process for all pages on the site.
- B. Click the "Manage layout" link of the home page, find the field containing the inaccurate information, and make changes there.
- C. Navigate to the Block Layout admin page's custom block library, find the custom block that contains the information in question, and make changes to the content in the block editor.
- D. Hover over the content until a pencil icon appears, click the icon, and choose "Edit" so that you can modify the content in Custom block edit interface.

**Answer: C,D**

Explanation:

In Drupal 10 and Drupal 11, content that appears in the sidebar across all pages is typically implemented as a custom block placed in a theme region via the Block Layout system. Drupal documentation explains that reusable content like contact information is best managed through custom blocks, which can be edited centrally and automatically update everywhere they are placed.

Option A is correct because the proper way to update such content is to go to Structure # Block layout # Custom block library, locate the block, and edit it. This ensures the change is reflected globally wherever the block is used.

Option C is also correct because Drupal provides contextual links (the pencil icon) that allow administrators to directly edit blocks from the front end. This is a standard and documented shortcut for editing block content.

Option B is incorrect because Layout Builder is not mentioned and is not required here. Option D is incorrect because editing individual pages would not update a shared sidebar block and would be inefficient and incorrect.

Thus, the correct Drupal site-building approaches are editing the custom block via the block library or using contextual links, making A and C correct.

### NEW QUESTION # 16

You have downloaded a contributed module and added it to modules/contrib folder on your Drupal site. However, you are unable to install the module as the checkbox next to the module name appears disabled on the Extend page. What could be the reason of this?

- A. modules/contrib is incorrect folder for contributed modules
- B. The module was not downloaded using Drupal's UI
- C. You do not have 'install modules' permission
- D. A module on which the current module has a dependency is missing

**Answer: D**

Explanation:

In Drupal 10 and Drupal 11, a module can appear on the Extend page but still have its checkbox unavailable when Drupal determines that its requirements are not met. One of the most common and documented reasons is missing dependencies. Drupal modules declare dependencies in their .info.yml file, and if one or more required modules are not present or enabled, Drupal prevents installation until those dependencies are satisfied. Drupal's module documentation specifically notes that when a module is listed on admin/modules but its checkbox is disabled, you should verify compatibility and requirements declared in the module metadata.

Option D fits Drupal's standard dependency behavior. This is also consistent with Drupal community documentation explaining that if you cannot check a module or feature on the module listing page, it is most likely because required dependent modules are missing, and unmet dependencies should be checked first.

The other options are not the correct explanation here. modules/contrib is a valid and standard location for contributed modules, and

downloading a module outside the Drupal UI does not itself disable installation. A missing permission would typically affect access to the page or action availability, but the classic reason for a disabled module checkbox on the Extend page is unmet dependencies.

## NEW QUESTION # 17

.....

VCEngine is one of the trusted and reliable platforms that is committed to offering quick Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) exam preparation. To achieve this objective VCEngine is offering valid, updated, and real Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) exam questions. These Acquia exam dumps will provide you with everything that you need to prepare and pass the final Acquia Drupal-Site-Builder exam with flying colors.
